The full list of changes in version 4.8.7 is available [here](#).

New features and improvements

1. Support for license plates from the following countries has been added to the Carmen recognition module: South Korea, U.S., Uruguay, Brazil, Chile, Argentina, Paraguay, Thailand, Iran, and Mongolia.
2. The Carmen recognition module can now display information about the color of the background of a license plate.
3. Filtering by recognition confidence (%) is now available when displaying recognized license plate numbers.
4. The Uragan license plate recognition module can display information about the number of vehicle lanes found in the frame, which makes setup easier.

Fixes

1. The algorithm for configuring license plate size in the frame has been changed for better recognition quality.
2. A number of minor code errors and documentation inaccuracies have been fixed.
3. A number of small code errors and documentation inaccuracies have been fixed.
