

Detector Pack 1.2 for Intellect 4.8.7

Release Notes

31 July 2013 AxxonSoft releases version 1.2 of the Detector Pack collection of video detection tools. This version is intended for use with version 4.8.7 of the Intellect PSIM.

The full list of changes in version 1.2 is available [here](#).

New features and improvements

1. A detection tool has been added for stopped vehicles, which allows identifying vehicles that have stopped in unauthorized places as well as obstructions. The detection tool generates an alarm if a vehicle stops and remains immobile in a user-specified area.
2. The detector package now has a light detector, which allows monitoring control panels with light indication. The detection tool allows specifying one or more areas with light sources in the frame, and then receiving notifications if light sources in any area are turned on or off.

Fixes

1. The visitor count detection tool no longer contains an error that passed parameters to the counting algorithm incorrectly.
2. The Detector_ext.run module no longer crashes with a memory dump when Intellect is exited.
3. In addition, a number of minor bugs have been fixed and product stability has been improved. Documentation has been clarified and supplemented.
