7.1 Set up the roles and users 36
7.1.1 Adding new users 36

7.1.2 Set up the roles ... 37
7.1.2.1 Role registration ... 37
7.1.2.2 Role editing ... 38
7.1.2.3 Role removal ... 39
7.1.3 Configure roles and users compliance ... 39
7.1.3.1 Assigning the roles to the user ... 40
7.1.3.2 Adding the users to the role ... 41
7.1.4 Change the administrator password ... 42
7.1.5 Setting up the user email ... 43
7.2 Setting up Intellect Web Report System operation in the automatic mode ... 43
7.2.1 Intellect Web Report System setting up procedure in the automatic mode ... 43
7.2.2 SMTP Server setup ... 43
7.2.3 Auto-generated reports setup ... 44
7.2.3.1 Creating the report ... 44
7.2.3.2 Editing the report ... 47
7.2.3.3 Deleting the report ... 48
7.2.4 Setting up the schedule of operation in the automatic mode ... 49
7.2.4.1 Creating the schedule item ... 49
7.2.4.2 Editing the schedule item ... 50
7.2.4.3 Deleting the schedule item ... 51
7.2.5 Setting up the automatically executed tasks ... 51
7.2.5.1 Creating the task ... 51
7.2.5.2 Checking the task execution ... 53
7.2.5.3 Running and stopping the task execution ... 53
7.2.5.4 Editing the task ... 53
7.2.5.5 Deleting the task ... 54
7.3 Setting up the POS reports ... 55
7.3.1 Creating the list of POS operators ... 55
7.3.2 Setting up the cashiers in the POS reports ... 56
7.3.2.1 Setting up the cashiers list ... 56
7.3.2.2 Setting up the new cashiers ... 57
7.3.3 Setting up the statuses of POS events ... 58
7.3.3.1 Creating the user status ... 59
7.3.3.2 Editing the status ... 60
7.3.4 Setting up the groups of statuses of POS events ... 60

7.3.4.1 Creating a group of statuses ... 61
7.3.4.2 Editing a group of statuses ... 62
7.3.4.3 Deleting a group of statuses ... 63
7.3.5 Setting up the filter of events ... 63
7.3.5.1 Creating a filter of events ... 63
7.3.5.2 Editing a filter of events ... 64
7.3.5.3 Deleting a filter of events ... 64
7.3.6 Selecting layouts in POS reports ... 65
7.3.7 Selecting items for report creating ... 65
7.3.8 Setting up parameters of report by potential violations ... 66
7.3.9 Setting up the user interface of POS reports ... 67
7.3.10 Setting up the Sweethearting report ... 69
7.3.10.1 Enabling the Sweethearting report ... 69
7.3.10.2 Filtering the sweethearting events ... 70
7.3.10.3 Setting the timeout for sweethearting event addition to report ... 71
7.3.10.4 Disabling sound notification about new events in Sweethearting report ... 72
7.3.10.5 Configuring the events preloaded on first Sweethearting report launch ... 72
7.4 Setting up the Time and Attendance reports ... 73
7.4.1 Setting up the user access rights to departments ... 73
7.4.2 Setting up the access rights to Time and Attendance reports ... 74
7.4.3 Enabling the extended display of reports ... 75
7.5 Setting up the Access Manager reports ... 77
7.5.1 Setting up user access to departments ... 78
7.5.2 Setting up user access to reports ... 79
7.6 Setting up the Auto reports ... 79
7.6.1 Setting up the Recognized license plates report ... 79
7.7 Setting up the general reports ... 80
7.7.1 Selecting the view of the list of objects and events for the Protocol report ... 80
7.8 Setting up the reports by Queue Length detectors ... 81
7.8.1 Disabling the zero value filter ... 81
7.9 Setting up the Customer behavior reports ... 81
7.9.1 Cleaning up the database for the Customer behavior reports ... 81
7.10 Updating the report database ... 82
7.11 Selecting the camera stream in live video reports ... 83
8 Working with Intellect Web Report System ... 84

8.1 Working with POS reports 84
8.1.1 General reports 84
8.1.1.1 Selecting a type of general POS report 84
8.1.1.2 Stastics by cashiers 86
8.1.1.3 Report by cashier 88
8.1.1.4 Report by event 90
8.1.1.5 Report by POS 92
8.1.1.6 Report by operator 93
8.1.1.7 Report by number of open POS terminals 95
8.1.1.8 Report by potential violations 98
8.1.2 Detailed reports 100
8.1.2.1 Viewing a detailed report 100
8.1.2.2 Viewing data from the POS terminal and the video of event 101
8.1.2.3 Changing the event status and the comment 102
8.1.2.4 Viewing the history of event status or comment changing 104
8.1.2.5 Filtering and sorting events in detailed reports 105
8.1.2.6 Select columns in detailed reports 107
8.1.2.7 Exporting the video 107
8.1.2.8 Disabling captions in the video surveying window 108
8.1.3 Sweethearting monitor 109
8.2 Working with Time and Attendance reports 110
8.2.1 Selecting a type of Time and Attendance report 110
8.2.2 Creating a Time and Attendance report 112
8.2.3 Viewing a Time and Attendance report 115
8.2.3.1 Time and Attendance report toolbar 115
8.2.3.2 Detailed general report 116
8.2.3.3 General report 117
8.2.3.4 Report by person quantity 118
8.2.3.5 Work schedule violations 118
8.2.3.6 Hours-worked report 119
8.2.3.7 Official acts report 121
8.2.3.8 Error report 121
8.2.3.9 Latecomers report 123
8.2.3.10 Presence at workplace report 123
8.2.3.11 Total report on the presence at the workplace 125

8.2.3.12 Employee time clock report 125
8.2.3.13 T-12 and T-13 reports 127
8.2.3.14 Generalized report 129
8.2.3.15 Personal presence at workplace report 131
8.2.3.16 General report by discipline and overtime 132
8.2.3.17 Simple generalized report 134
8.3 Working with Access Manager reports 135
8.3.1 Selecting the type of Access Manager report 135
8.3.2 Creating the Access Manager report 137
8.3.2.1 Access Manager report toolbar 137
8.3.2.2 Report by employee passes 138
8.3.2.3 Report by first and last card presenting per calendar day 140
8.3.2.4 Employee statuses report 143
8.3.2.5 Report by users of access levels and readers 144
8.3.2.6 Report by actions of Event Manager operator 147
8.3.2.7 Report by users access levels 151
8.3.2.8 Employees absent for too long report 152
8.4 Working with reports by Queue Length detectors 154
8.4.1 Average queue length in time interval 154
8.4.2 Queue length threshold crossing 158
8.5 Working with reports by People Counter detectors 160
8.5.1 Selecting a type of reports by People Counter detector 160
8.5.2 Creating a report of average number of people in time interval 162
8.5.3 Creating an Entering/Exiting People Count report 166
8.5.4 Creating an Entering/Exiting People Count report with Point of Sale data 170
8.5.5 Creating a Face counter report (detailed by servers) 173
8.5.6 Creating a Face counter report (detailed by cameras) 177
8.5.7 Creating a Face counter report (detailed by detectors) 180
8.5.8 Creating a People Count report 182
8.6 Working with AUTO reports 187
8.6.1 Selecting the type of Auto report 187
8.6.2 "Time slice" on zone 188
8.6.3 "Slice" on group 191
8.6.4 Traffic statistic by vehicles groups 194
8.6.5 Traffic statistic by vehicles type 198

8.6.6 Recognized license plates 202
8.7 Working with general reports 204
8.7.1 Selecting the type of general report 204
8.7.2 Creating a Protocol report 206
8.7.3 Creating a Change protocol report 209
8.7.4 Creating a report of current objects state 211
8.7.5 Creating a Graphic report on events 213
8.8 Working with Customer behavior reports 216
8.8.1 Selecting a type of Visitors behavior analysis reports 216
8.8.2 Creating the Customer activity statistics report 217
8.8.3 Creating a Heat map report 221
8.9 Exporting of reports 223
9 Conclusion 225
10 Appendix 1. The RemoteProtocolConnector utility for extracting event protocol to a separate database 226
10.1 Extracting event protocol to a separate DB with RemoteProtocolConnector 226
10.2 Purpose of the RemoteProtocolConnector. Start and shutdown 228

1 Introduction

1.1 The purpose of the document

Intellect Web Report System. User guide document contains information that is necessary for setting and further operation of *Intellect* software package report system and its vertical solutions. In the system working with reports is made through Web interface.

The structure of the document allows the user to skim over the provided information about *Intellect Web Report System* and select, according to degree of training, interesting parts for detailed study. Chapters in the guide are of information or reference content. They have their own internal structure.

The Introduction chapter is for general examination of the user with *Intellect Web Report System* system functionality and implementation features.

Recommendations that are necessary to user-administrator for *Intellect Web Report System* system installation are given in details in the Requirements for Intellect Web Report System realization and Intellect Web Report System installation and removing chapters of this guide.

Description of startup and shutdown of *Intellect Web Report System* system is given in Intellect Web Report System startup and shutdown chapter.

A brief excursus into system interface is given in Intellect Web Report System interface chapter.
Further in the Intellect Web Report System administration chapter there are step-by-step instructions for setting user private parameters and activation of required functionality. This information is useful both for system administrator and for operator who has rights to administrate system settings.
Information about using *Intellect Web Report System* functionality is given in the Working with Intellect Web Report System chapter.

1.2 Purpose of the Intellect Web Report System

Intellect Web Report System is a site that is located in the local network or Internet according to requirements to security system that is performed on the basis of *Intellect* software package. Administration and working with this system is performed entirely through the Web interface.

Web interface of *Intellect Web Report System* allows accomplishing the following tasks:

1. Creating and exporting reports by event log and viewing video archive from registration time of the selected event in the report (General reports). The base *Intellect* software package is required for working.
2. Creating and exporting reports by performed changes (General reports). The base *Intellect* software package is required for working.
3. Creating and exporting reports of *Auto-Intellect* module ("Auto" reports). The *Auto-Intellect* software package is required for working.
4. Creating and exporting general and detailed reports by work time accounting (WTA reports). The *ACFA Intellect* software package is required for working.
5. Creating and exporting general and detailed reports by count of people in the monitored object (People Counter detection). The *Intellect Detector Pack* and Face-Intellect software package is required for working.
6. Creating and exporting reports by queue length (Queue length detectiors). The Intellect Detector Pack software package is required for working.
7. Creating and exporting general and detailed reports by POS-events (POS reports). The *POS Intellect* software package is required for working.They also include Sweathearting monitoring for which the Intellect Detector Pack software package is required.
8. Setting up reports by POS events (setting up statuses of POS-events and so on).

   > **Note.**
   > Statuses of POS events are used for analyzing POS events while creating reports.

9. Setting up the varied user access to all reports.
10. Setting up the *Intellect Web Report System* operation in the auto mode.

> **Note.**
> In *Intellect Web Report System* one can generate reports automatically on the schedule with subsequent saving report files on local computer and/or sending them by e-mail.

11. Creating and exporting customer behavior reports. The *Intellect Detector Pack* software package and Analytics Pack *subsystem* are required for working.

1.3 Components of the Intellect Web Report System

The following components perform *Intellect Web Report System* realization:

1. Web server – computer that is supposed to be used for location of system site.
2. Clients – computers that are supposed to display Web interface of system.

In particular case Client and Web server of *Intellect Web Report System* can coincide. In other cases Web server should be available for Clients through network.

Installation of *Intellect Web Report System* is performed only on computer that is supposed to be used as Web server (see Intellect Web Report System installation and removing chapter).

Requirements for realization of Web server and Client are given in details in Requirements for Intellect Web Report System realization chapter.

2 Requirements for Intellect Web Report System implementation

2.1 The web server of the Intellect Web Report System

To implement the web server of *Intellect Web Report System* it is necessary to install it from distribution kit that consists only of ReportSystem.msi installation package.

Attention!
For working with *Intellect Web Report System* it is strongly recommended to use Windows OS server platforms.
This requirement is connected with limit of Microsoft Internet Information Services (IIS) server set in 10 simultaneous connections on any other Windows OS platforms.

Note.
Intellect Web Report System Web server is compatible with the same versions of operating systems as the Intellect software package.

Before *Intellect Web Report System* installation it is necessary to make sure that the following components are installed on computer:

1. Microsoft.NET Framework 4 platform;
2. Set of Microsoft Internet Information Services (IIS) servers;
3. ASP.NET 4.5 module.

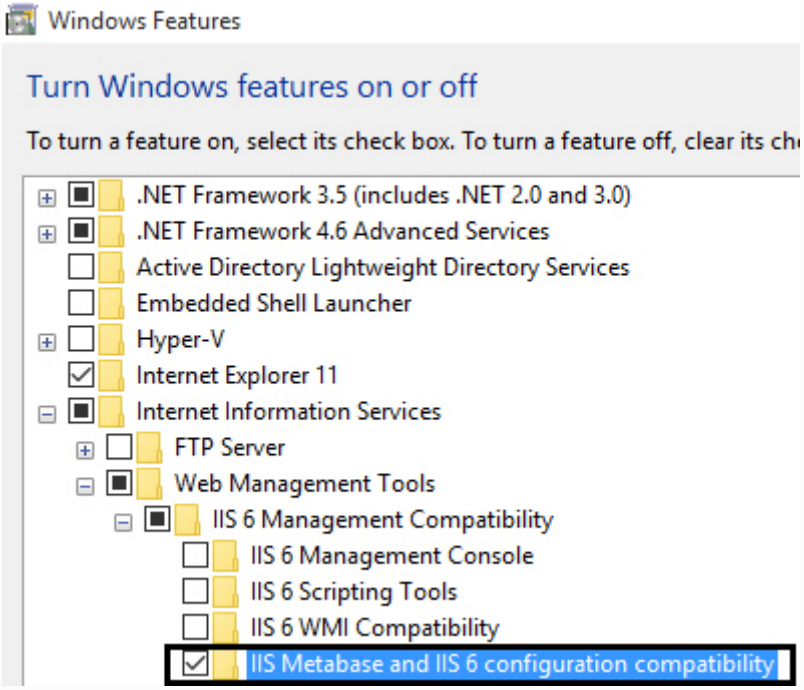
If these program products are not installed it is necessary to install them.

Note.
Microsoft.NET Framework 4 platform is available for uploading at http://www.microsoft.com/.

Note.
Set of IIS servers is distributed along with operating systems of Windows family and as their optional component.
Installation of IIS servers set is performed in accordance with vendor website.
Installation of ASP.NET 4.5 module which is submodule to the IIS set of servers is performed in accordance with the following vendor website.

Note.
ASP.NET 4.5 module is to be enabled in the following places for Windows 8/8.1 OS:
- .NET Framework 4.5 add-on services;
- IIS services -> Internet Services -> Application development components.

Note.
The IIS Metabase and IIS 6 configuration compatibility component is to be enabled for Windows 10 OS.



For correct creation of reports in *Intellect Web Report System* Web server should be connected by network with all servers of databases that are used in operation. At the moment these are SQL servers that store database of *Intellect software package* configuration and system itself and optionally SQL servers where *Time and Attendance* and/or *POS reports* databases are located. In special cases both Web server and SQL server can be located on one computer.

The internal database of the server has the MS SQL format. A list of versions MS SQL Server, supported in *Intellect Web Report System* subsystem is identical with the list of versions for the Intellect software (see the Internal video Server database section).

Corresponding *Intellect* video servers (registered in the database of the *Intellect* configuration connected while installation) must be started in order to display the event video archive in detailed reports.

If the Clients connection to the Web server is supposed to be via network it is necessary to make sure that the Web server has the static IP address. Moreover it must be available on the Internet if it is specified in the security system project.

2.2 The client of the Intellect Web Report System

2.2.1 General requirements

To ensure the proper *Intellect Web Report System* web interface displaying on the Client, the following requirements should be met:

1. *Internet Explorer* browser of 8.0 version and later.

   Attention!
   When working with *Intellect Web Report System* in the 64-bit operating system, it is recommended to use the *Internet Explorer* 32-bit browser.

2. To view the video archive of the event from the report:
   a. The use of ActiveX components in the browser should be permitted.
   b. The ActiveX *CamMonitor* component should be installed.

Note
The *CamMonitor* component is installed automatically with *Intellect* software package.
If *Intellect* software package is not installed on the Client, it is necessary to install the *CamMonitor* component separately.

Attention!
Web browsers that do not support ActiveX, display all text reports without the ability to view the video archive.

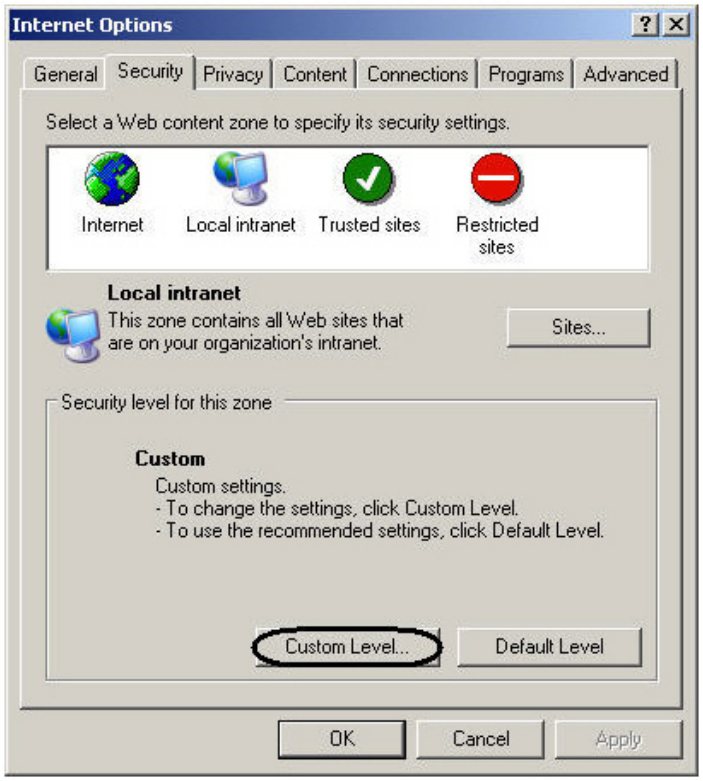
2.2.2 Setting up security parameters in Internet Explorer

By default the use of ActiveX components is forbidden in *Internet Explorer*, that is why it's necessary to set extra security parameters.

For this do the following:

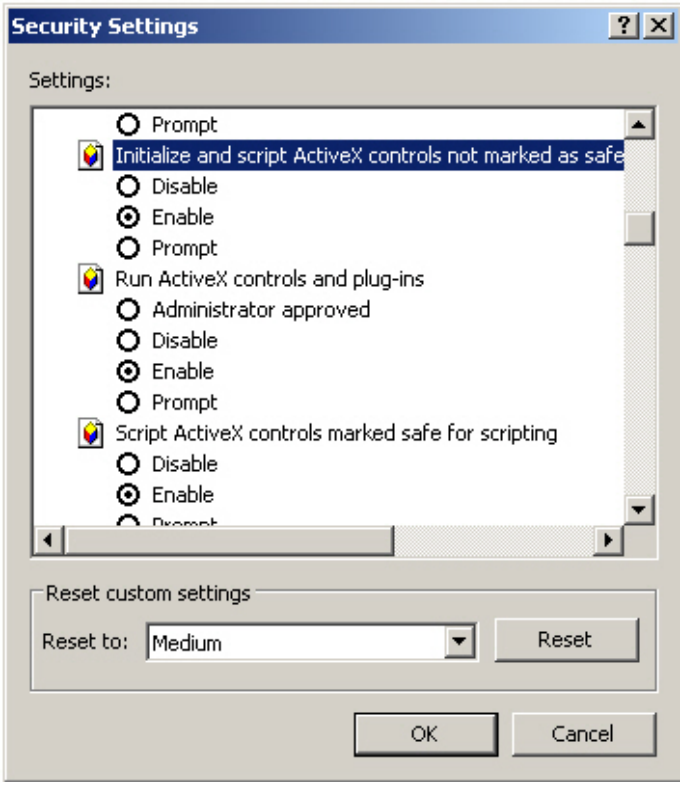
1. Execute the **Tools** –> **Internet options** command in main menu of *Internet Explorer* browser.

2. In the **Internet options** dialog box go to the **Security** tab.



3. In selected zone of dialog box (selected on default) click **Custom level**.

4. In the **Security settings**dialog box execute the following settings:
   4.1 Set the **Script ActiveX controls marked safe for scripting** checkbox to the **Enable** position.
   4.2 Set the **Initialize and script ActiveX controls not marked as safe** checkbox to the **Enable** position.



5. Click **OK** in **Security settings**, and then in **Internet options.**
6. Restart browser.

Setting security parameters in Internet Explorer browser is completed.

3 Intellect Web Report System installation and removal

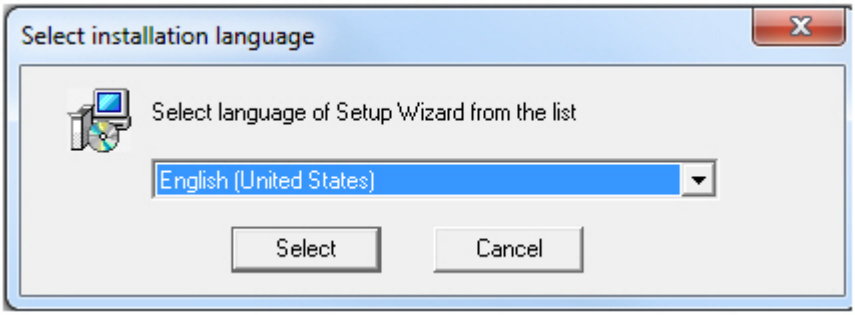
3.1 Installation

The *Intellect Web Report System* is installed as a part of the *Intellect* software. Information about compatibility of the *Intellect* software versions and *Intellect Web Report System* is presented by link: General information about product releases and versions compatibility.

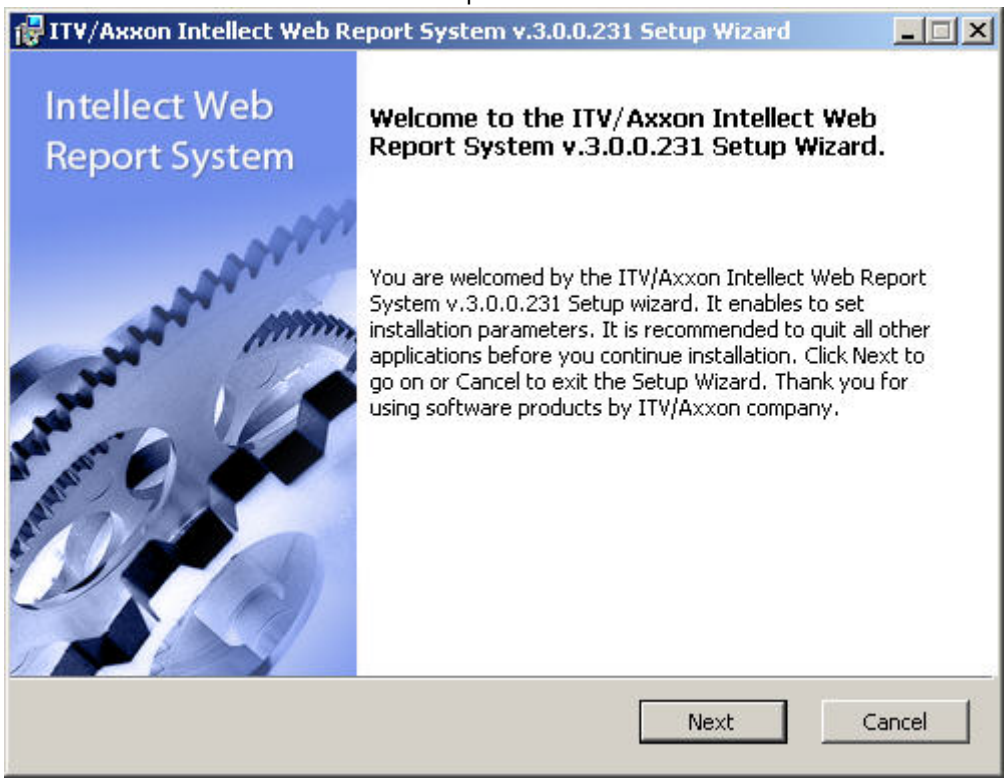
> **Important!**
> The *Intellect Web Report System* should be installed on both **Server/Remote administrator workplace (RAW)** and **Client** (for details, see Intellect software. Administrator's Guide).

To install *Intellect Web Report System* do the following:

1. Start the ReportSystem.msi installation package.
2. In the language dialog window select the language from the list.

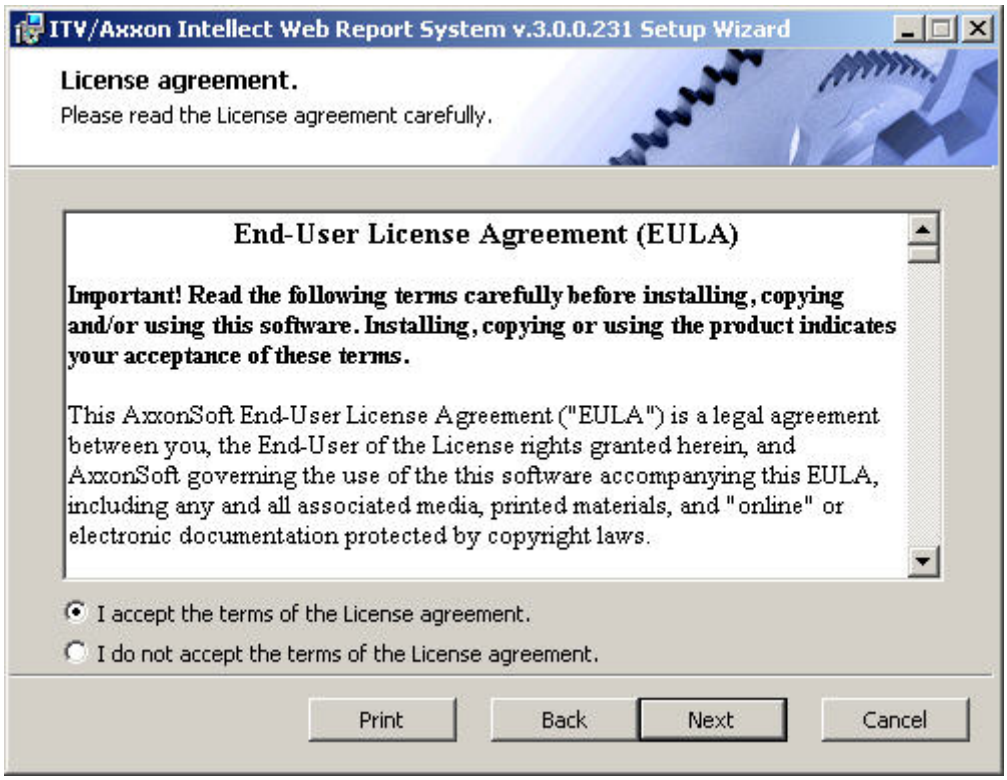


3. Click **Next** in the welcome window of setup wizard.



The dialog box of the License agreement is displayed.

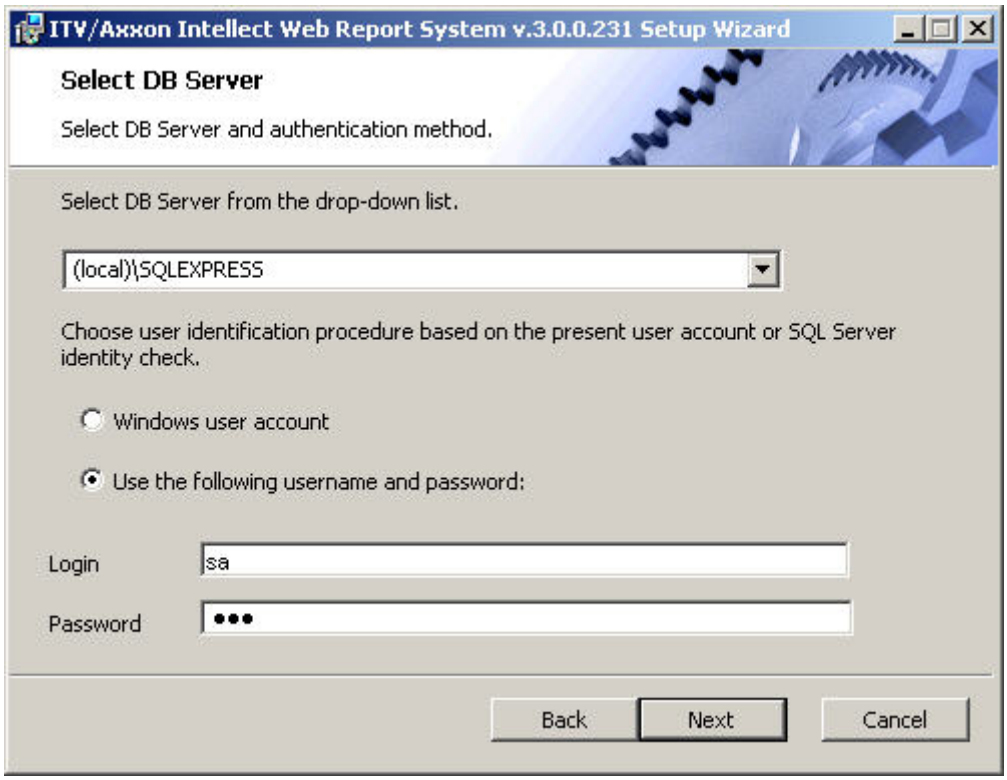
4. To continue the installation one should accept the terms of the License agreement by setting the switch into **I accept the terms of the License agreement** position. Then click **Next**.



The **Select DB server** window is displayed.

5. From the **Select DB Server from the drop-down list** select SQL server where the database of the Intellect software package configuration is located. The database of *Intellect Web Report System* will be created on the same SQL server.

> **Note.**
> Later it's possible to move the database of Intellect Web Report System to another SQL server. The changes should be made in C:\Program Files\Intellect\Modules\Wt2\Web.config file by correcting the following connection string:
> <add
> name="ReportSystemConnectionString"
> connectionString="Password=ITV;Persist Security Info=True;User ID=sa;Initial Catalog=ReportSystem;Data Source=(local)\SQLEXPRESS;"
> providerName="System.Data.SqlClient" />.



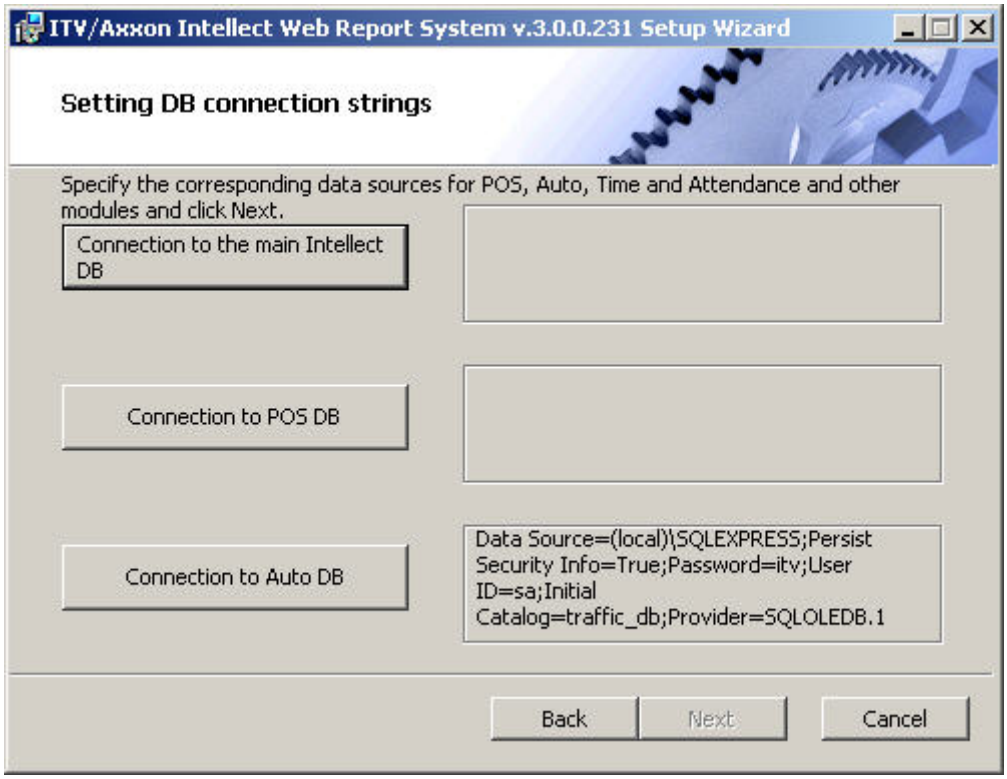
6. Set the authentication method that will be used by the *Intellect Web Report System* while connecting to SQL server with the database of the Intellect software package configuration.
   Connecting by the **Windows Account information** method there is a confirmation of user identity by using current account information of Windows OS. Method of using specified user name and password allows confirming SQL server authenticity.

   Note.
   Windows Account information method is used in the following cases:
   a. When SQL server where it's necessary to create *Intellect Web Report System* database and system itself are installed on one computer.
   b. When SQL server and *Intellect Web Report System* system are installed on different computers connected by TCP/IP and located in one network domain. An account for user that is authorized in Windows OS on computer where *Intellect Web Report System* is installed should be created in Windows OS on computer with installed SQL server.

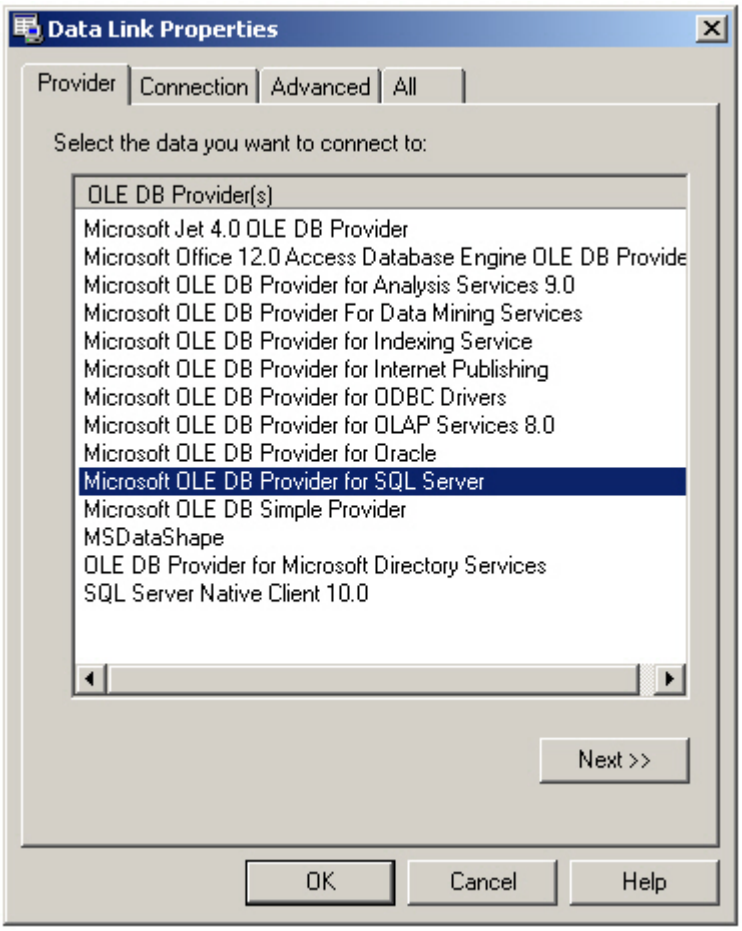
   Note.
   Method of using login and password is for the following cases:
   a. When SQL server where it's necessary to create *Intellect Web Report System* system database and system itself are installed on one computer.
   b. When SQL server and *Intellect Web Report System* system are installed on different computers connected by TCP/IP and located in one network domain. At the same time specified user name (login) and password should be the same as user name (login) and password that are used to SQL server access.

7. To continue the installation process click **Next.**
   The window where it is necessary to set connection string of *Report System* to the database of Time and attendance module, to *POS Intellect* database and/or *AUTO Intellect* database. Connected databases will be the data source when creating reports.

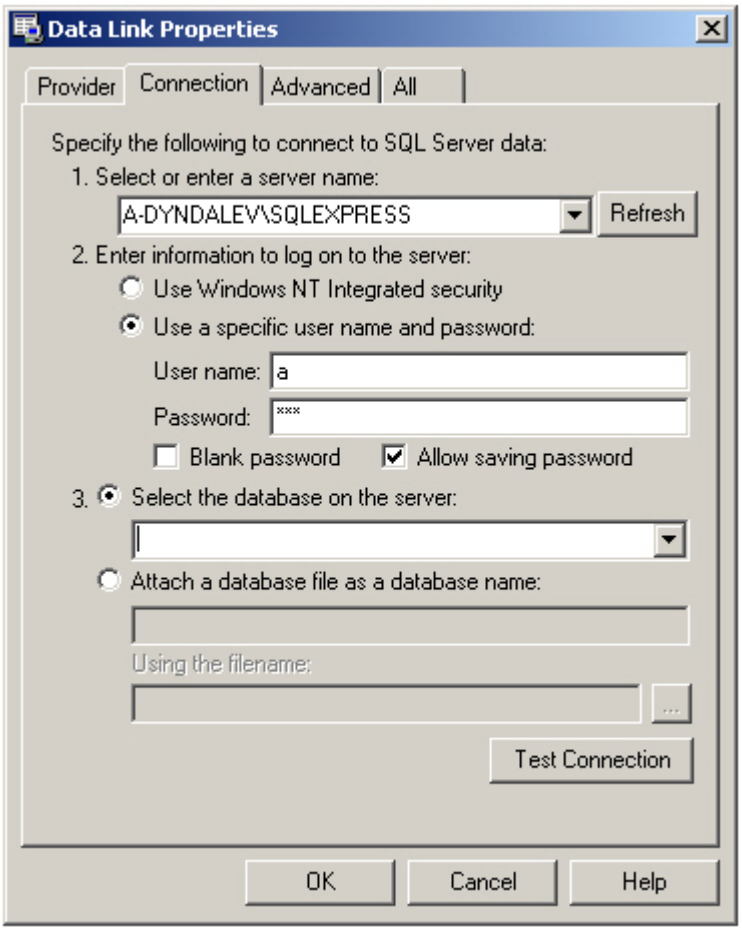
Note.
If the POS Intellect software and the AUTO Intellect software are installed after the *Intellect Web Report System* installation, the connection of *Intellect Web Report System* database to the corresponding module is to be performed. Launch the Repairing mode of *Intellect Web Report System* and enter the corresponding connection strings (see Repairing section).



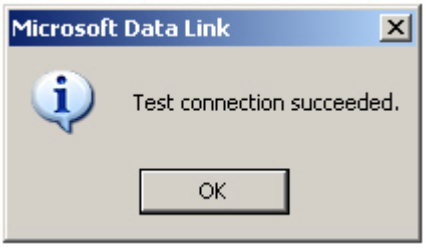
8. To set connection string to the database of *Time and Attendance*module do the following:
   8.1 Click **Connection to the main Intellect DB**.
   8.2 As a result the **Data link properties** dialog box is displayed.



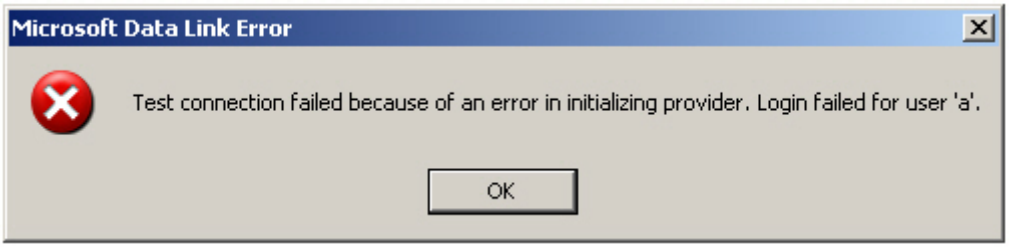
8.3 In the **Data provider** tab select **Microsoft OLE DB Provider for SQL Server**. Click **Next**.
8.4 As a result there will be an automatic switch to **Connection**.



8.5 In **1. Select or enter a server name** line select from the list or enter manually the name of SQL server where database of *Time and Attendance* module is stored.
8.6 To log on SQL server it is necessary to set authentication parameters. For this set switch into **Use a specific user name and password** position. In the **User name** and **Password** fields enter username (login) and password in order to connect to SQL server. Set the **Allow saving password** checkbox.
8.7 To check connection to SQL server click **Test connection**.
In case of successful connection the window with the **Test connection succeeded** message will be displayed.



It's necessary to click **OK** in the window of message and as a result the window will be shut down automatically.
If the name of SQL server and/or authentication parameters that are used in order to connect to it were set wrong then the corresponding message is displayed.



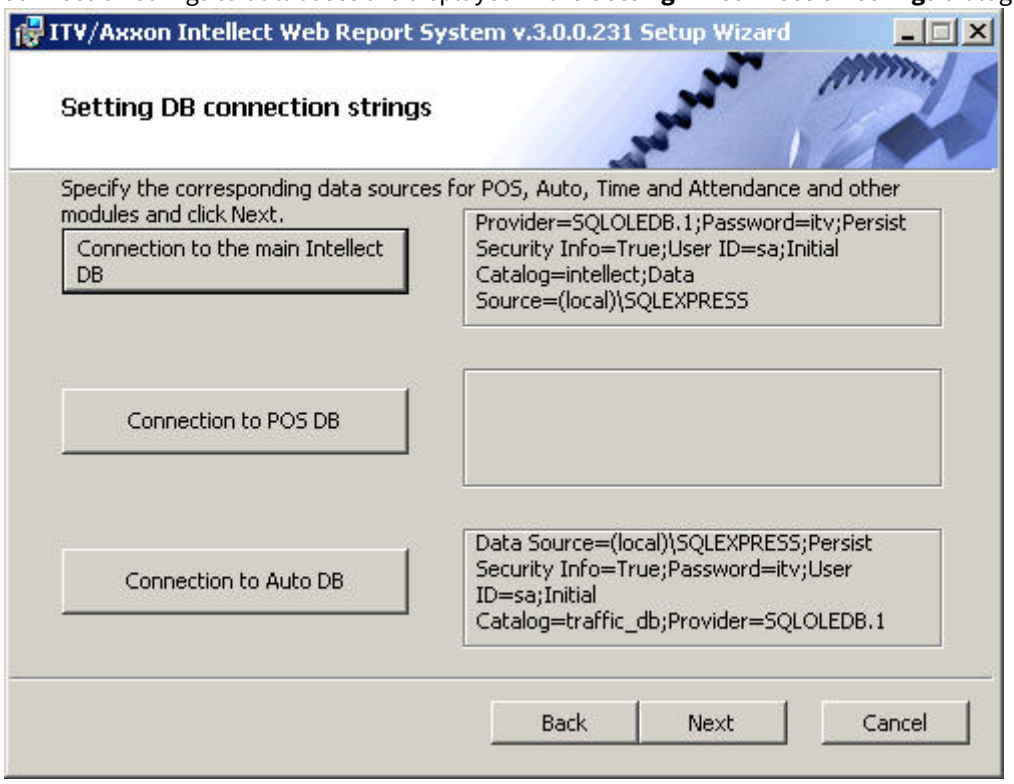
To shut down the window with the message, click **OK**. Then correct the data and check connection to SQL server once

again.
8.8 If check of connection to SQL server is successful, select from the **Select database on server** list the name of connected database.

> **Note.**
> Database of the *Time and Attendance* module coincides with the database of Intellect configuration (name by default is intellect).

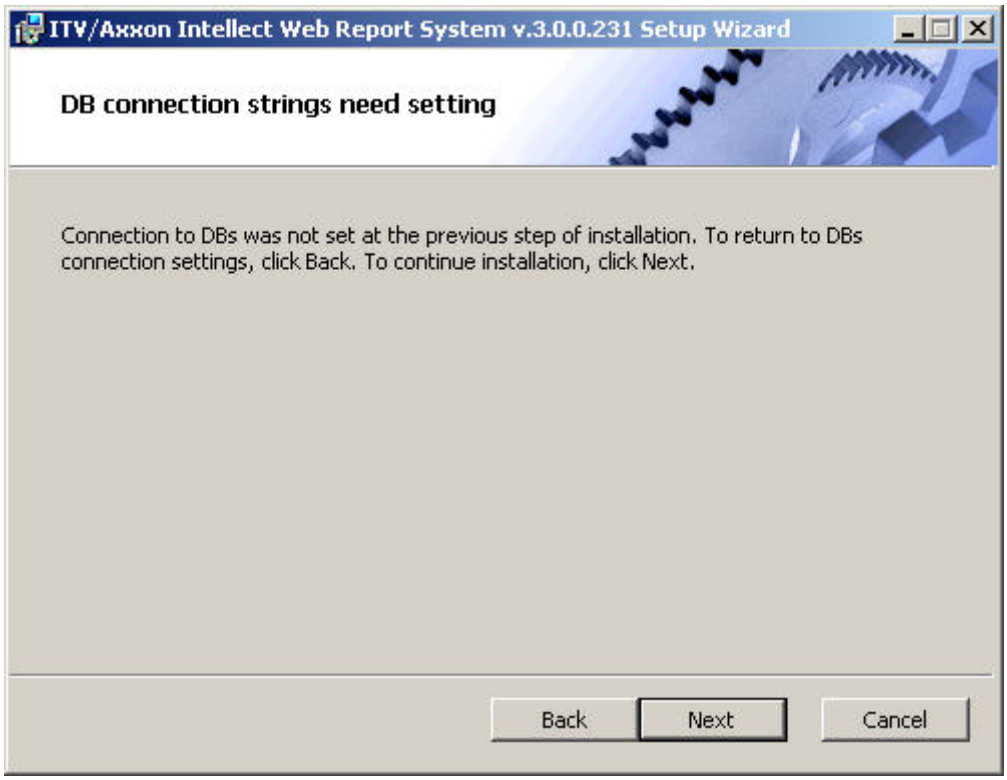
8.9 Click **OK** in the **Data connection properties** dialog box. As a result of this operation the dialog box will shut down.
Setting connection string to the database of *Time and Attendance* module is completed.

9. To set connection string to *POS* database do the following:
   9.1 Click **Connection to POS DB**.
   9.2 As a result of this operation the **Data connection properties** dialog box is displayed.
   9.3 Repeat 8.3-8.9 steps but connect POS database (name by default is *pos*).
   Setting connection string to POS database is completed.
10. To set connection string to *AUTO* database do the following:
    10.1 Click **Connection to Auto DB**.
    10.2 As a result of this operation the **Data connection properties** dialog box is displayed.
    10.3 Repeat 7.3-7.9 steps but connect AUTO database (name by default is *traffic_db*).
    Connection strings to databases are displayed in the **Setting DB connection strings** dialog box.



11. Click **Next**. If DB connection strings has not been set then the **DB connection strings need setting** dialog box will be displayed as a result.

> **Note.**
> If DB connection strings has been set then installation will start as a result (see point 10).

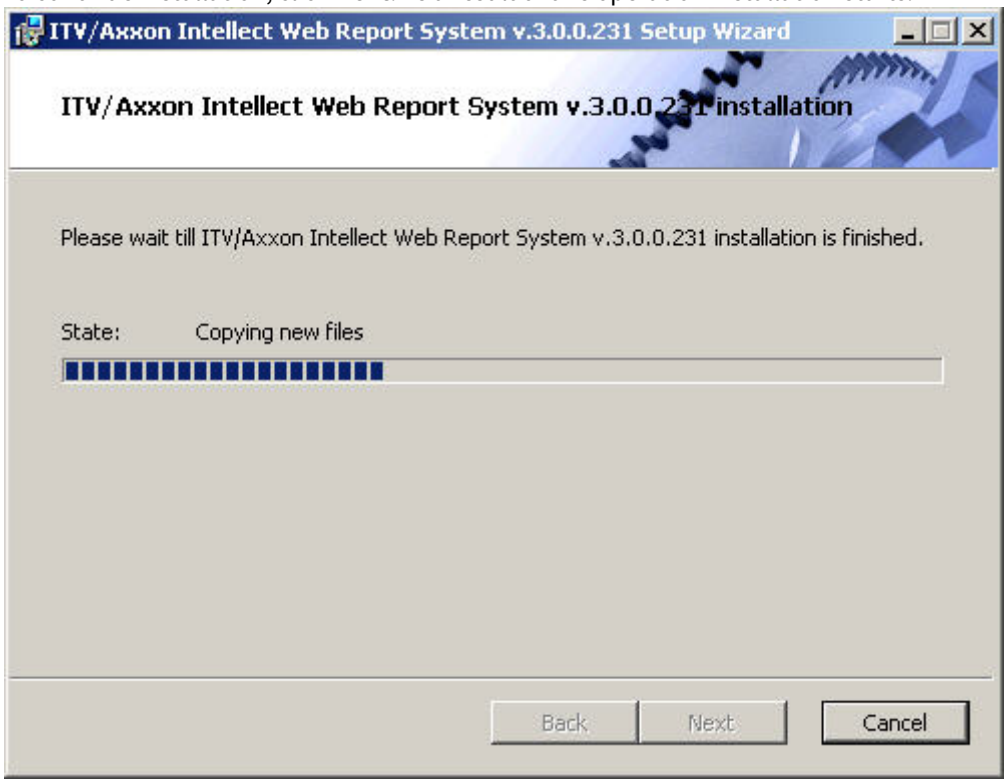


This dialog box warns about failure of connection to DB that doesn't guarantee the operation of the system.

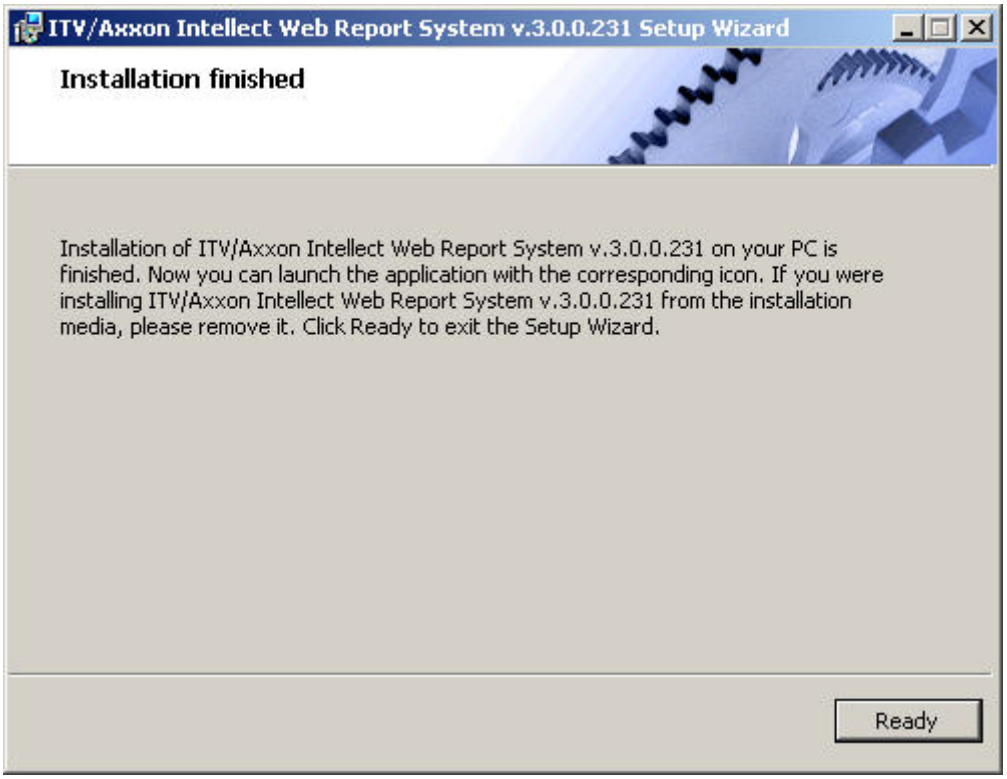
Note.
If there was installation without setting connection to DB then you can set the connection to DB using C:\Program Files\Интеллект\Modules\Wt2\Web.config file and adding connection strings. Examples of connection strings are given below:

a. <add name="IntellectDB" connectionString="Provider=SQLOLEDB.1;Password=itv;Persist Security Info=True;User ID=sa;Initial Catalog=intellect;Data Source=WS2\SQLEXPRESS"/>
b. <add name="PosDB" connectionString="Server=.\SQLEXPRESS;Integrated Security=SSPI;Persist Security Info=False;Database=pos;Provider=SQLOLEDB.1"/>
c. <add name="ReportSystemConnectionString" connectionString="Password=itv;Persist Security Info=True;User ID=sa;Initial Catalog=ReportSystem;Data Source=(local)\SQLEXPRESS;"/>

12. To continue installation, click **Next**. As a result of this operation installation starts.



Message that *Intellect Web Report System* installation is finished is displayed in a new dialog box.



Intellect Web Report System installation is finished and system is installed in *C:|Program Files|Интеллект|Modules|Wt2* folder.

> **Note.**
> If there is no folder it will be created automatically.

Attention!
After Intellect Web Report System installation it's necessary to restart Intellect software package.

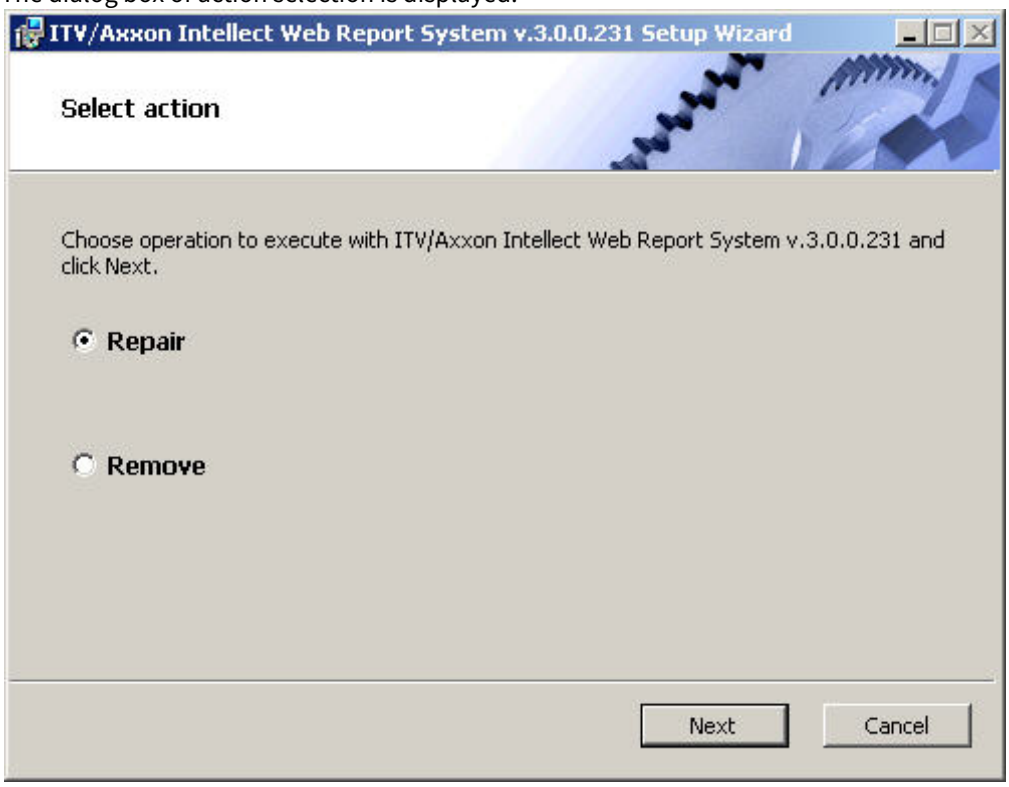
3.2 Repairing

Repairing mode is designed for reinstallation of all components of *Intellect Web Report System*.

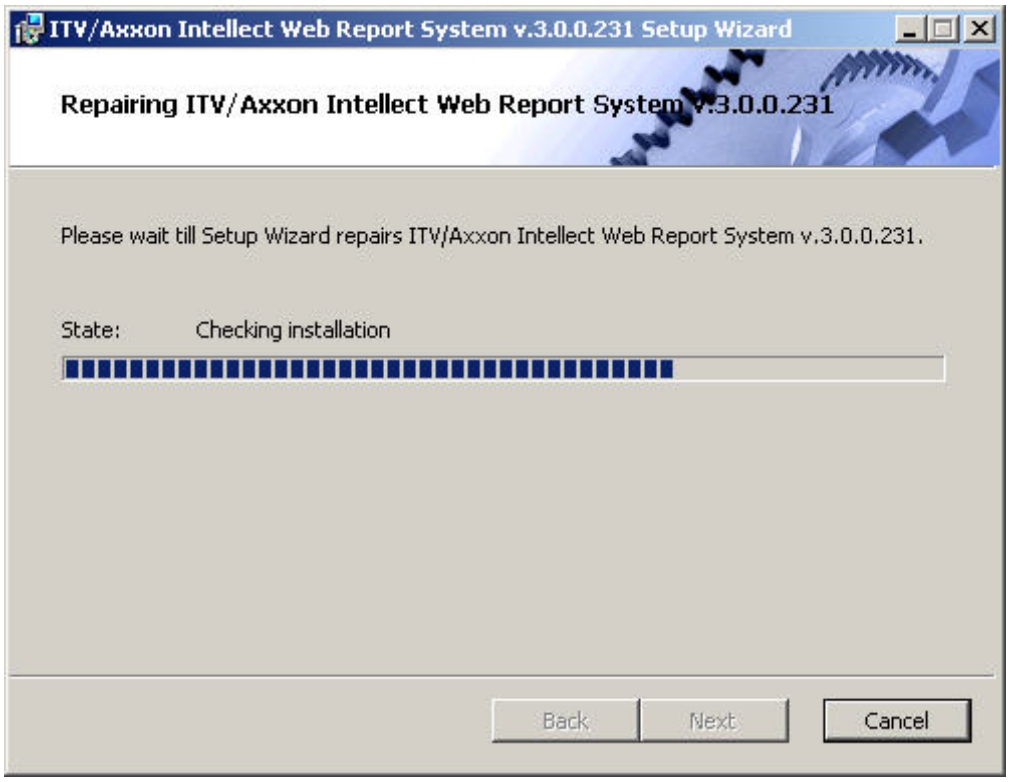
To start repairing mode it's necessary to start *Intellect Web Report System* installation once again without removing previous version of system.

To repair *Intellect Web Report System* do the following:

1. Start the ReportSystem.msi installation package.
   The dialog box of action selection is displayed.



2. Select **Repair** type and click **Next**
   The **Selection DB server** box is displayed.
3. In this and following boxes repeat 4-9 steps of *Installation* part.
   The dialog box of *Intellect Web Report System* repairing is displayed.



When repairing is finished the dialog box, where it's necessary to click **Ready**, is displayed.

Intellect Web Report System repairing is completed.

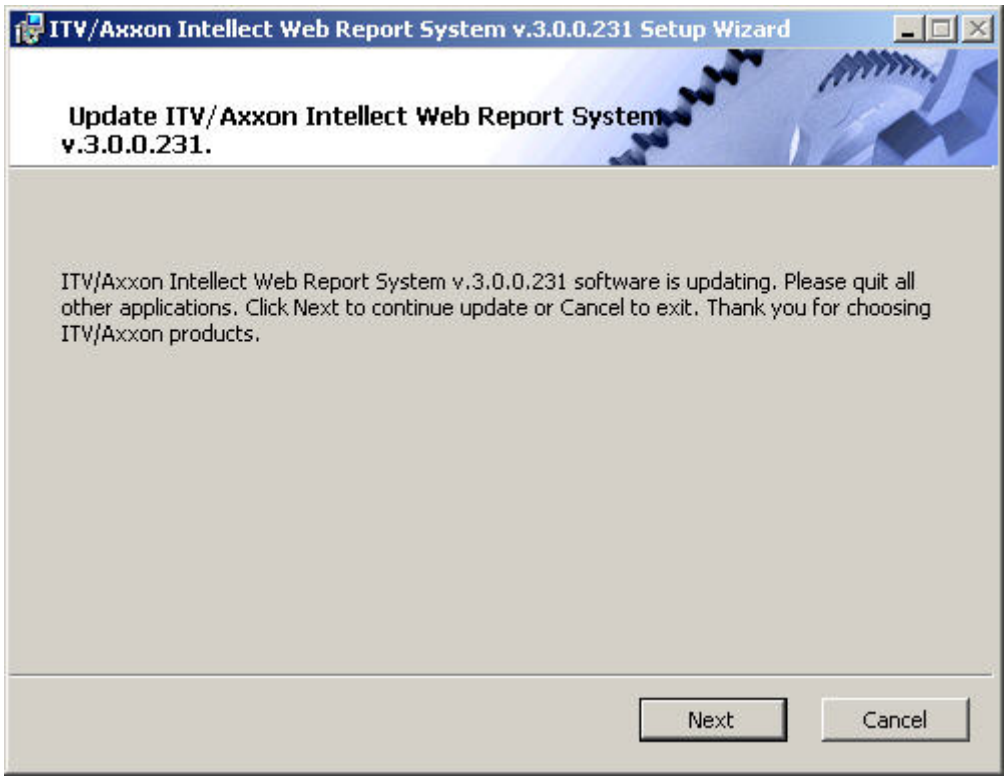
> **Attention!**
> After *Intellect Web Report System* repairing it's necessary to restart Intellect software package.

3.3 Updating

Updating mode is used for installation of *Intellect Web Report System* new version without removing the previous one.

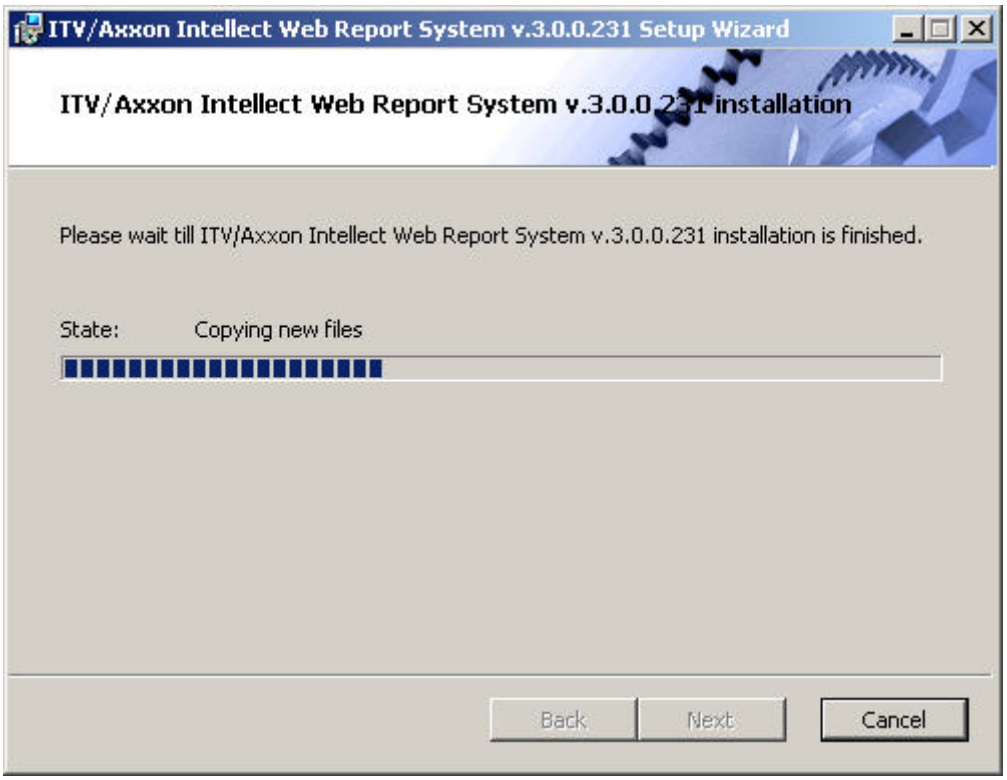
To update *Intellect Web Report System* do the following:

1. Start the ReportSystem.msi installation package.
   The dialog box of *Intellect Web Report System* updating is displayed.



2. Click **Next**.
   The **Selection DB server** box is displayed**.**
3. Repeat steps 4 and 5 of *Installation* part.

The dialog box of *Intellect Web Report System* updating is displayed.



When updating is finished the dialog box, where it's necessary to click **Ready**, is displayed.

Intellect Web Report System updating is completed.

Attention!
After *Intellect Web Report System* updating it's necessary to restart Intellect software package.

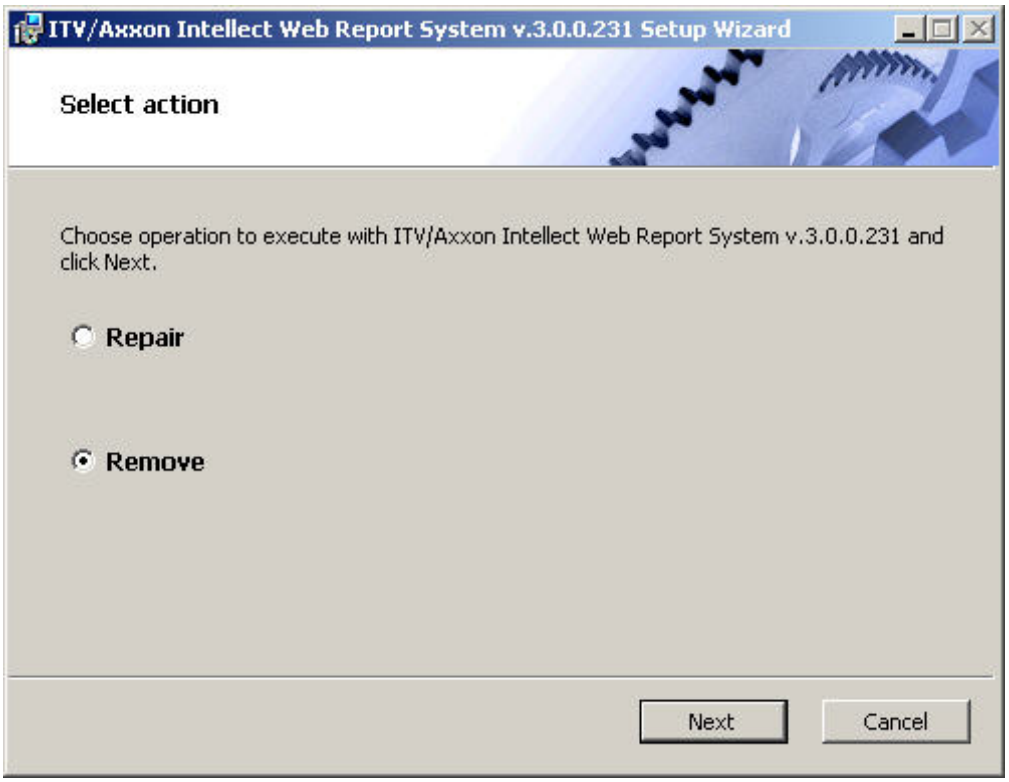
3.4 Removal

Intellect Web Report System installation wizard also operates in removing mode. This mode is necessary when you need to remove all *Intellect Web Report System* components on your Computer.

Starting removal is performed by using one of the following ways:

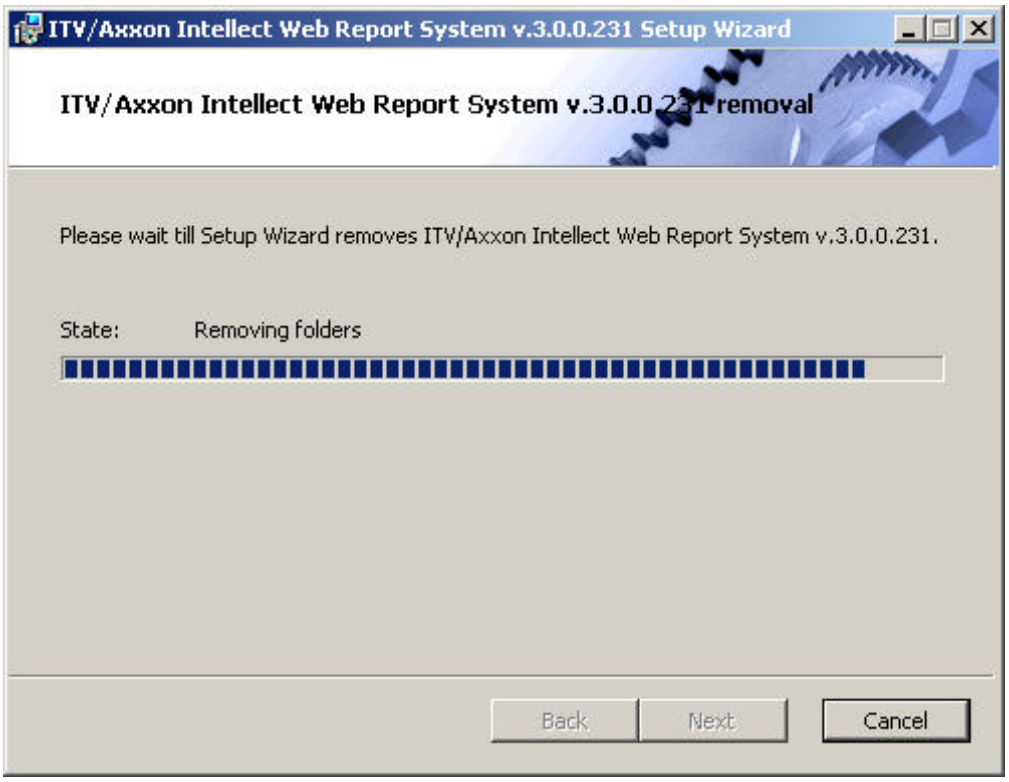
1. Using *Add or Remove Programs application* of Windows OS control panel;
2. Using ReportSystem.msi installation package.

As a result of one of these actions the dialog box of action selection is displayed.



Select **Remove** type and click **Next**.

The dialog box of removing process of *Intellect Web Report System* will be displayed.



When removing is finished the dialog box, where it's necessary to click **Ready**, is displayed.

Intellect Web Report System removing is completed.

4 Intellect Web Report System licensing

4.1 Activation key

Intellect Web Report System functionality is restricted by the activation key that is bundled with the *Intellect* installation kit.

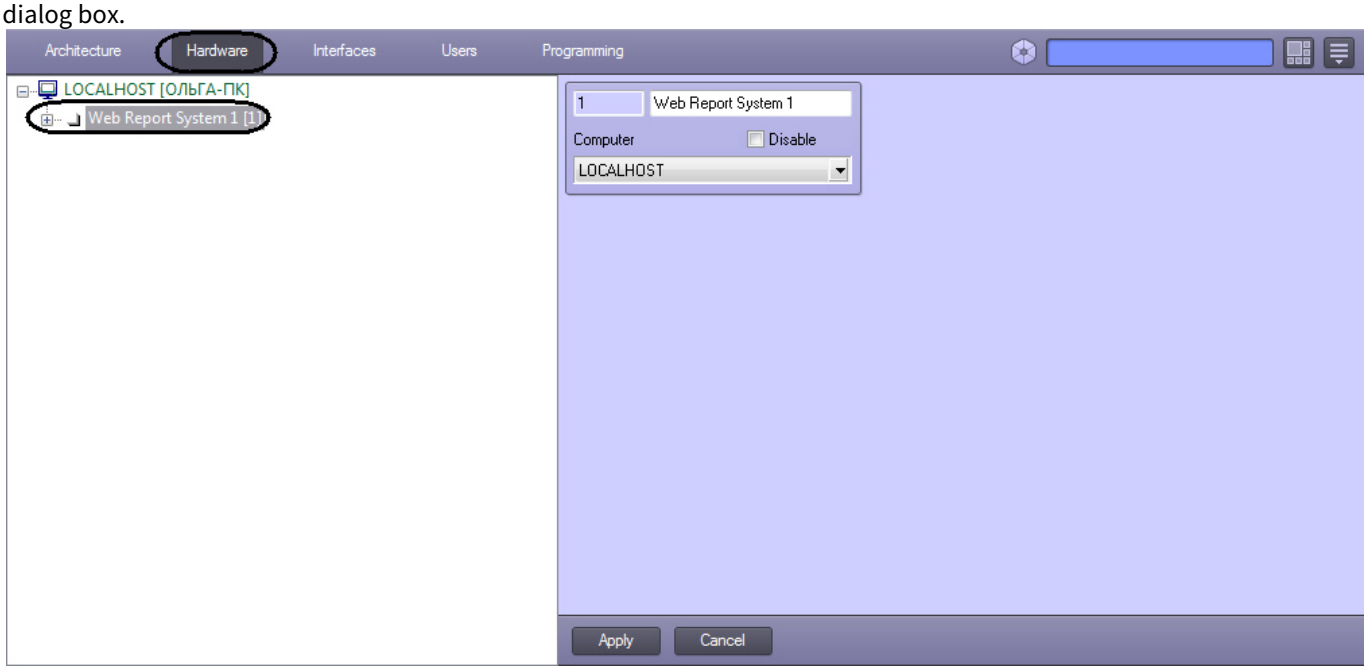
If the *Intellect Web Report System* is extended (for example if it is necessary to add some types of reports) then it is necessary to replace the previous activation key with a new one that will restrict the updated system functionality.

4.2 Activation of Intellect Web Report System functionality

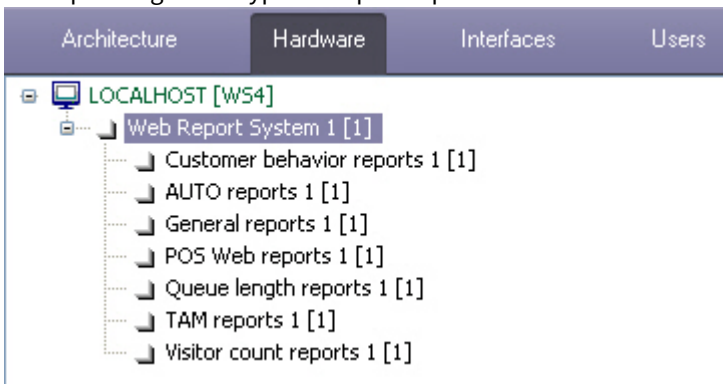
> **Attention!**
> The activation of *Intellect Web Report System* functionality is possible only if there is the corresponding activation key.

To activate *Intellect Web Report System* functionality do the following:

1. Start *Intellect*.
2. Create the **Web report system** object on the basis of the **Computer** object on the **Hardware** tab of the **System settings** dialog box.



3. Create the objects (**Time and Attendance reports**, **POS reports, Queue-length detection, People counter detection, AUTO reports, General reports**, **Customer behavior reports**) on the basis of the **Web report system** object corresponding to the types of reports specified in the activation key.



Activation of *Intellect Web Report System* functionality is completed.

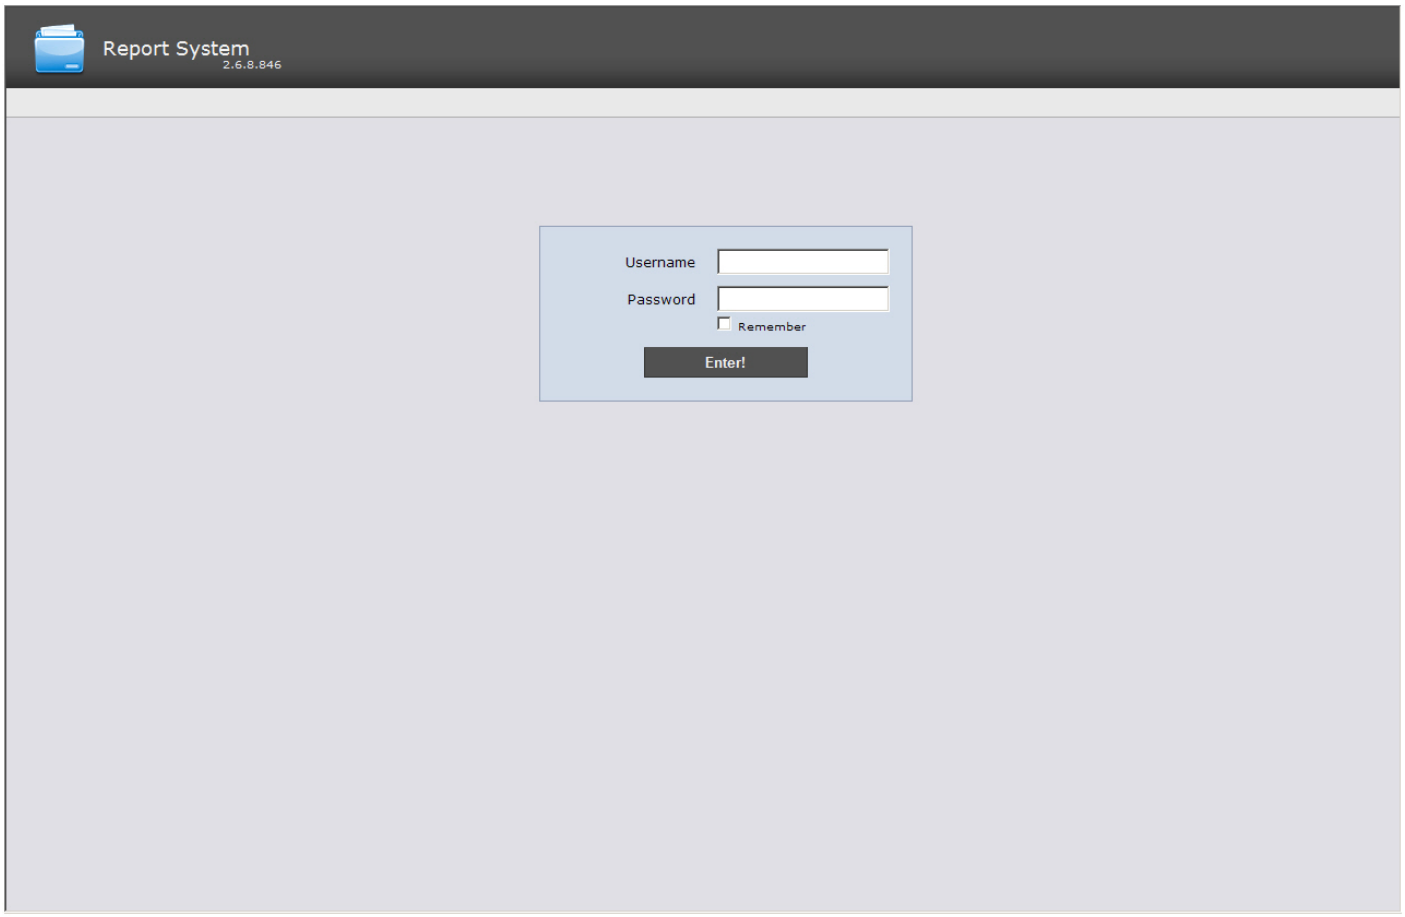
5 Intellect Web Report System startup and shutdown

5.1 Ways of starting

Starting of *Intellect Web Report System* is carried out in one of two ways:

1. If the Client coincides with the Web server – through the Start menu of Windows OS: Start -> All Programs -> Intellect -> Reports system;
2. On any Client – through the connection string of the browser: http://< Web server IP address>:8081/Reports.

As a result of one of these actions *Intellect Web Report System* authorization page is displayed.



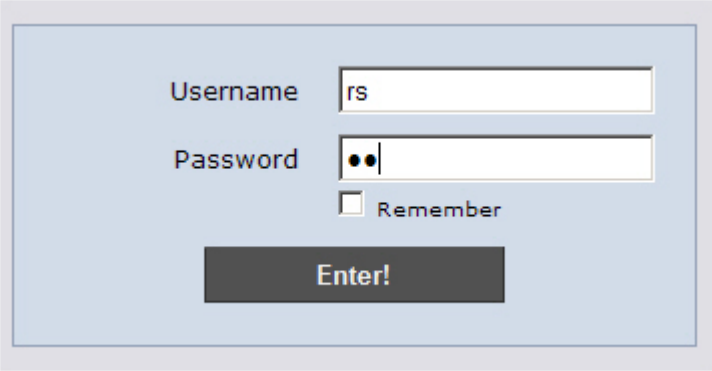
5.2 Authorization

> **Note**
> The authorization page is displayed in the language selected in the browser by default or specified in **Web.config** file (see details in Change the Intellect Web Report System interface language).

For *Intellect Web Report System* authorization do the following:

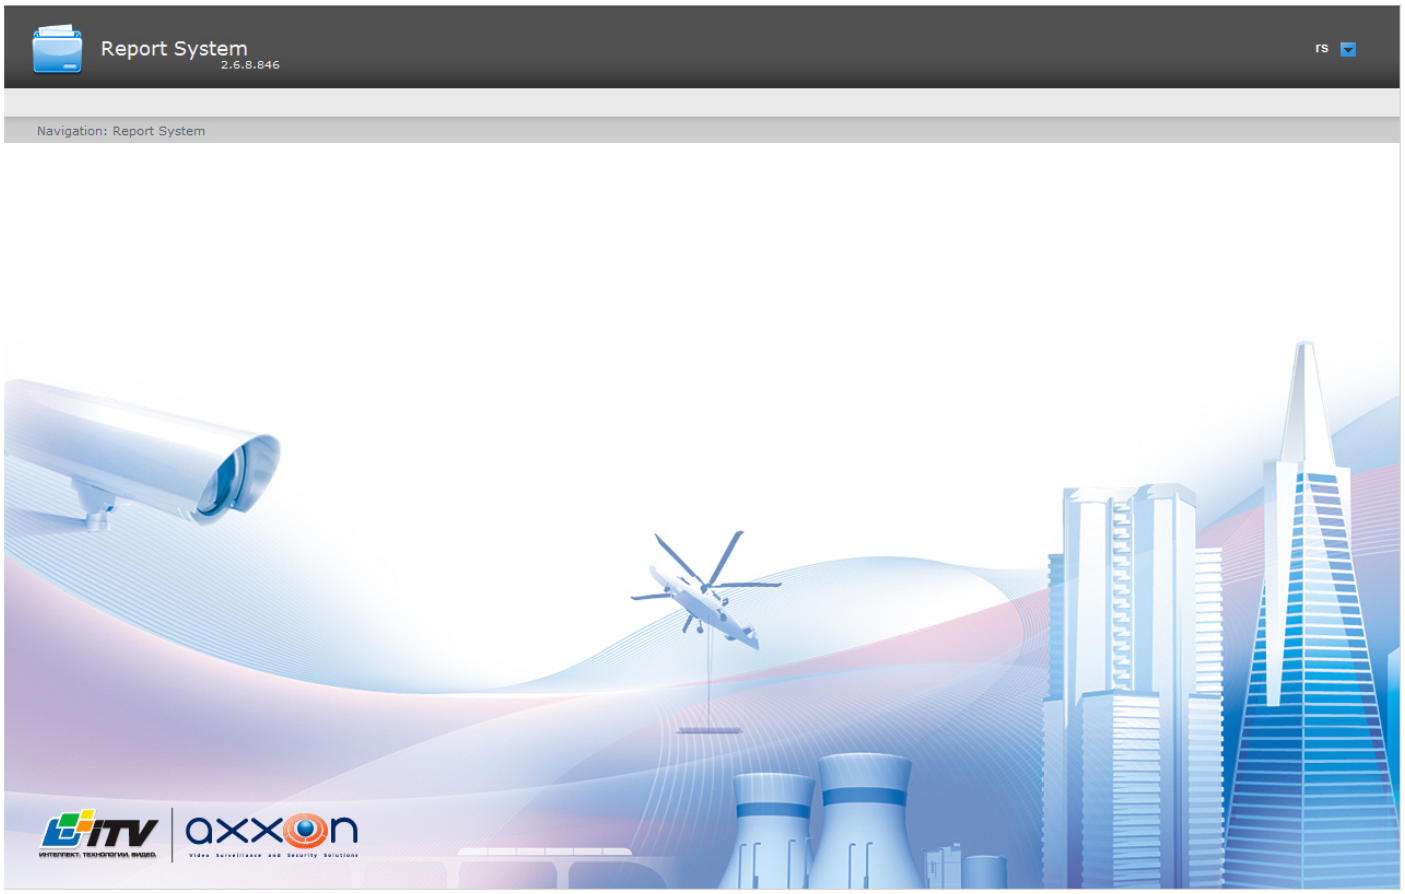
1. Start *Intellect Web Report System in one of the available ways* (see Ways of starting).
2. Type the username, password.

> **Note**
> Initial entry to *Intellect Web Report System* is under **rs** user who has administrative rights. In the **Username** and **Password** fields one should type **rs**. Further the administrator has to set the system for a multiuser mode (for more details see Set up the roles and users section).



3. Set the **Remember** checkbox if the automatic authorization in Report System (with parameters specified in the step 2) is required.
4. Click **Enter!**

As a result one goes on the *Intellect Web Report System* document page.



> **Note**
> The interface of the document page is described in Intellect Web Report System interface chapter.

5.3 Shutdown

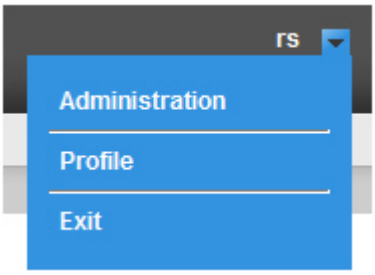
To shutdown *Intellect Web Report System* close the window in the browser.

5.4 User switching

One can quickly switch between user accounts of the *Intellect Web Report System*.

For this do the following:

1. In the right upper corner of the Web interface hover cursor over the current username or over icon.



2. In the context menu select the **Exit** item.
3. *Intellect Web Report System* authorization box is displayed. Type the username under which one should enter the system, password and click **Enter** (see the Authorization chapter).

User switching is completed.

6 Intellect Web Report System interface

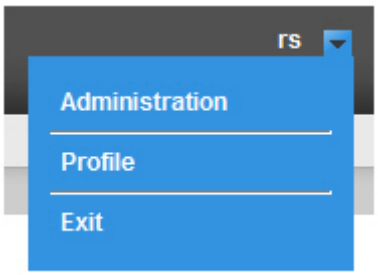
Intellect Web Report System interface consists of the following elements*:*

1. context menu;
2. page of documents;
3. administration page;
4. user profile page.

6.1 Context menu

Intellect Web Report System context menu is available both on the page of documents and on the administration page.

In order to display the context menu hover cursor over the current username in the right upper corner or over icon.



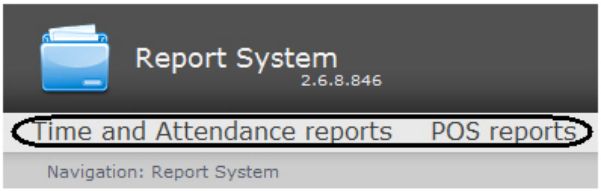
The following operations are available from the context menu:

1. Switch to the administration page – the **Administration** item is used;
2. Switch to the user profile page – the **Profile** item is used;
3. Switch to the authorization page – the **Exit** item is used.

6.2 Documents page

Page of documents is displayed automatically after the authorization in *Intellect Web Report System*.

Besides the context menu the reports menu is also displayed on the page of documents.

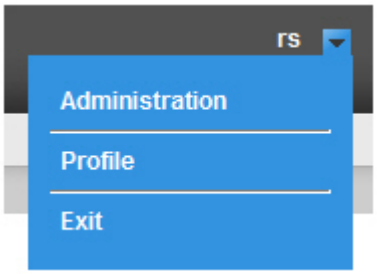


Note.
If there are no operation rights for Time and Attendance reports and/or POS reports then the corresponding items of the reports menu (POS reports, Time and Attendance reports) are not displayed.

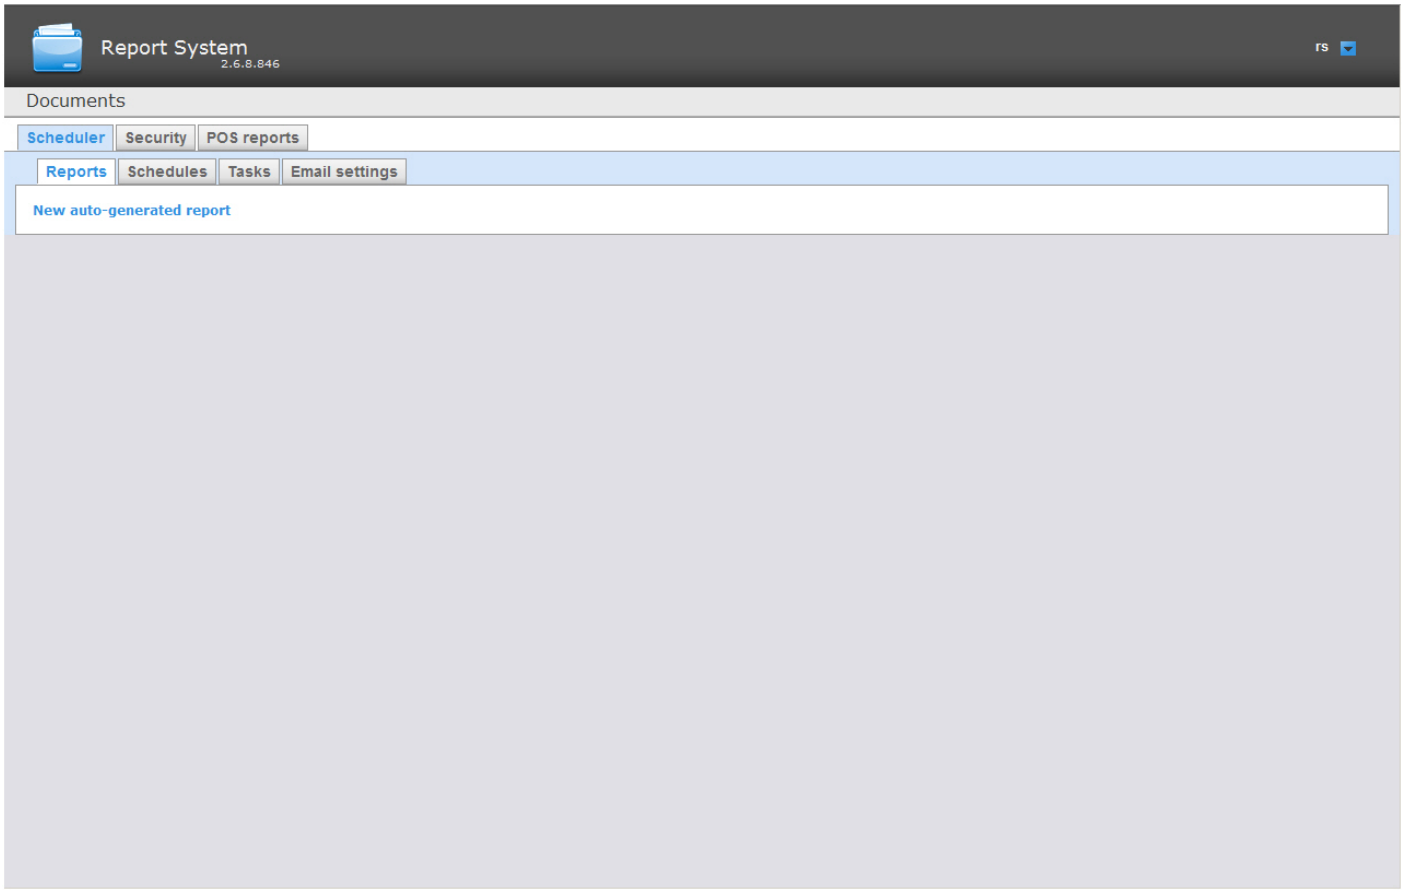
6.3 Administration page

Switch to the *Intellect Web Report System* administration page is carried out through the context menu by selecting the **Administration** item.

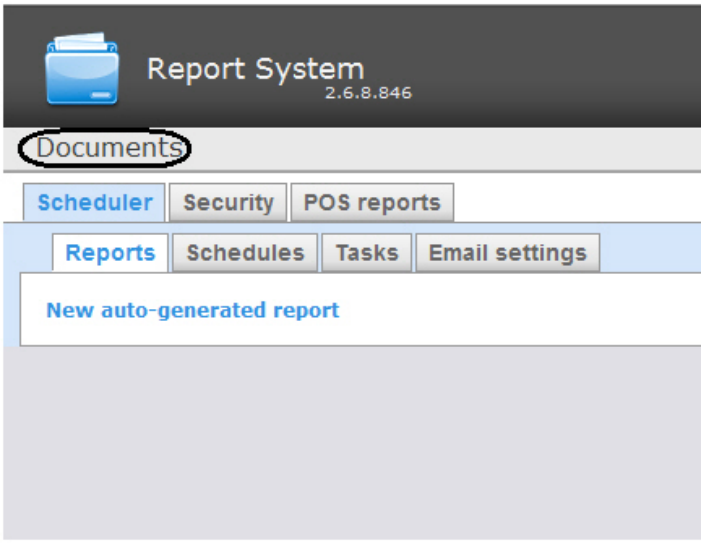
Note.
For some users this item can not be displayed (it depends on the availability of the administration rights).



The *Intellect Web Report System* administration page will display.



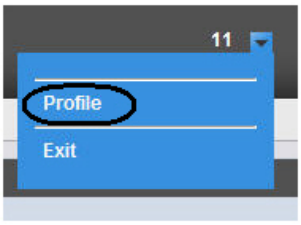
To return to the documents page click the **Documents** link.



6.4 User profile page

Changing the interface language of *Intellect Web Report System* is performed in the user profile page.

Switch to the *Intellect Web Report System* user profile page is carried out through the context menu by selecting the **Profile** item.

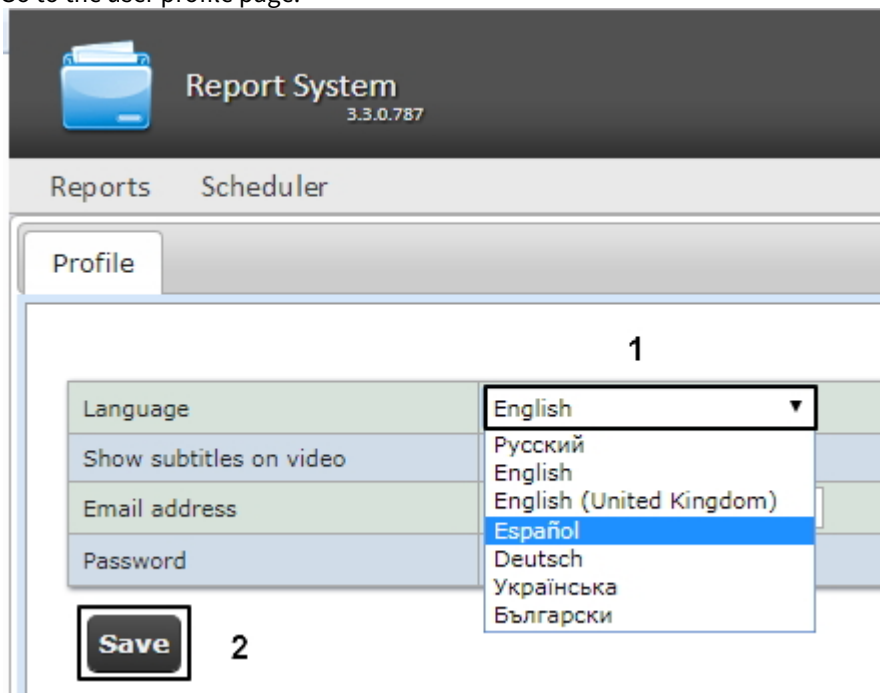


6.5 Change the Intellect Web Report System interface language

Important!
When changing the language of *Intellect Web Report System* interface, the language of interface of the authorized user is changed too. The authorization page (see Authorization) is displayed in the language selected in the browser by default. The language of the authorization page can also be changed in **Web.config** file located in <*Intellect* installation folder>\Modules\Wt2. For this specify the required value of available languages (en, en-GB, es, de, ru, uk, bg, pl) instead of "auto" value in the <globalization culture="auto" uiCulture="auto"/> line.

To change the interface language, do the following:

1. Go to the user profile page.



2. In the **Language** dropdown list select the required interface language (1).
3. Click **Save** (2).

Changing the interface language is completed.

> **Note**
> The selected interface language affects regional standards, specifically, in date and time formats which are used for report generation.
> The table below lists the date and time formats for all languages available in the subsystem.

Local	Data format	Time format
Русский	dd.mm.yyyy	24-hour
English	mm/dd/yyyy	12-hour
English (United Kingdom)	mm/dd/yyyy	24-hour
Español	dd/mm/yyyy	24-hour
Deutsch	dd.mm.yyyy	24-hour
Українська	dd.mm.yyyy	24-hour
Блъгарски	dd.mm.yyyy	24-hour

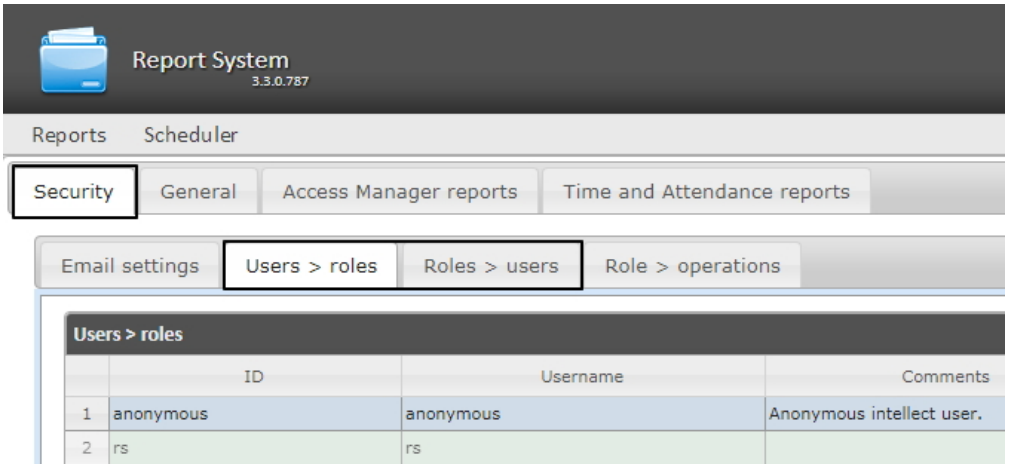
7 Intellect Web Report System administration

7.1 Set up the roles and users

Setting up the roles and users is carried out in the **Security** tab on the administration page.

7.1.1 Adding new users

The list of users of the *Intellect Web Report System* is available on the **Users > Roles** and **Roles > Users** of the **Security** tab**.**



By default the *Intellect Web Report System* contains two users, **rs** and **anonymous**, none of which can be deleted.

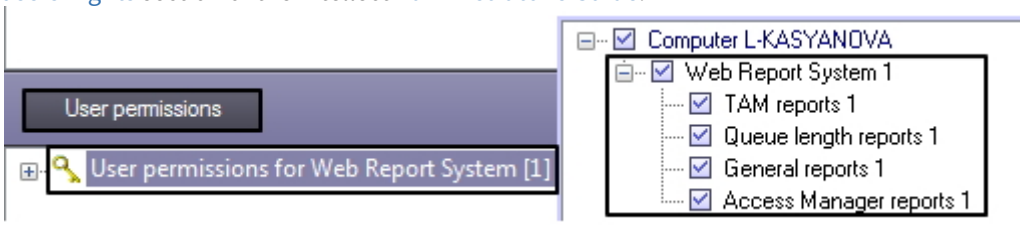
The **rs** user in *Intellect Web Report System* performs the administrator fuctions, while **anonymous** is a dummy operator account.

New users can be added to *Intellect Web Report System* by means of *Intellect* system settings only.

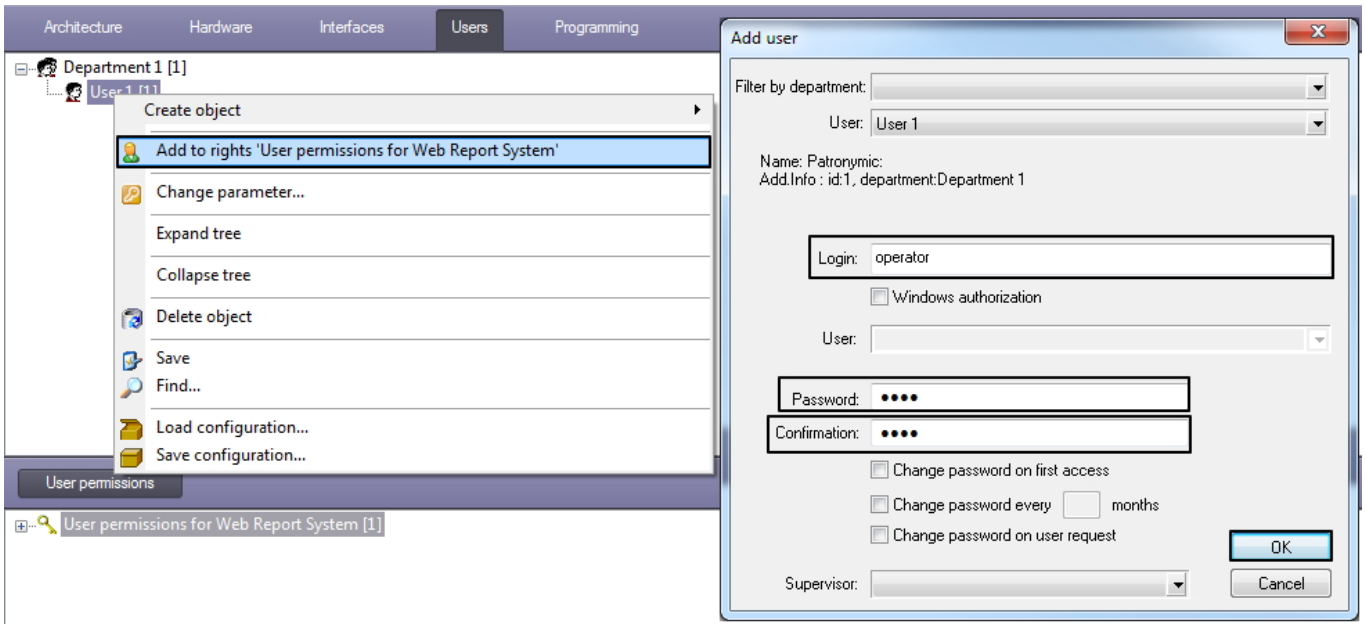
Adding a new user to *Intellect Web Report System* includes three basic steps:

1. Registration of an new user in *Intellect.* This procedure is described in detail in the User registration and removal section of the *Intellect* Administrator's Guide.

2. Registration of the right to use *Intellect Web Report System.* This procedure is described in detail in the Registration of users' rights section of the *Intellect* Administrator's Guide.



3. Assigning the right to to use *Intellect Web Report System* to the new user. This procedure is described in detail in the Assigning the rights and password to operators for authorization in the Intellect section of the *Intellect* Administrator's Guide.

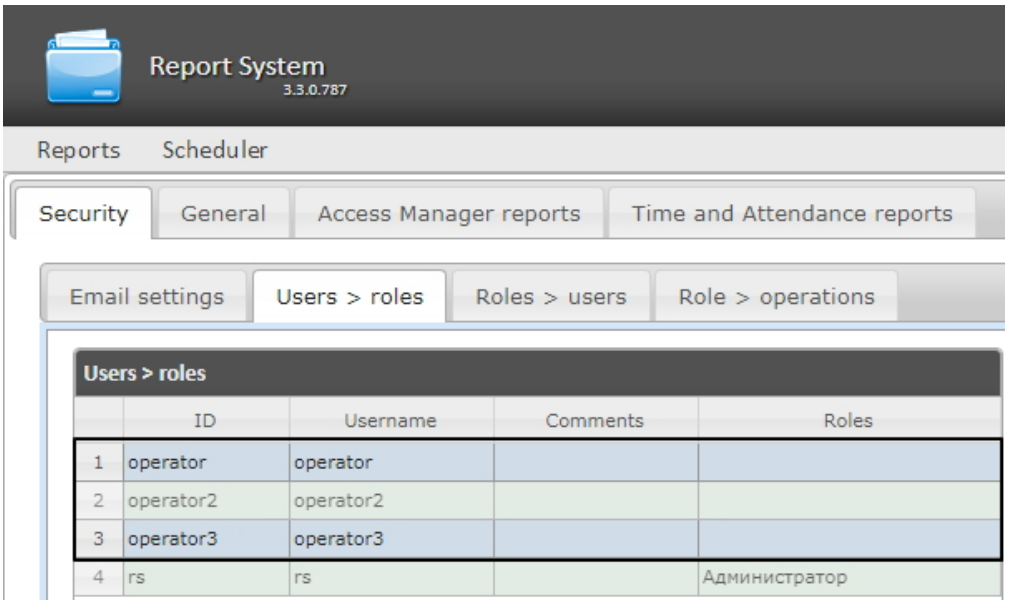


Note

It is recommended to take into account the following specifics while adding a new *Intellect Web Report System* user by means of *Intellect:*

a. The **anonymous** user is a dummy operator account. Once the first operator will be created with *Intellect,* the dummy will be replaced with the account data of the first added user.
b. The user login in *Intellect Web Report System* is similar to the login assigned to the user when he is granted the right in *Intellect*.
c. The username and login are subject to the same rules as the Windows login.

Any required number of users may be added to *Intellect Web Report System* in this manner.



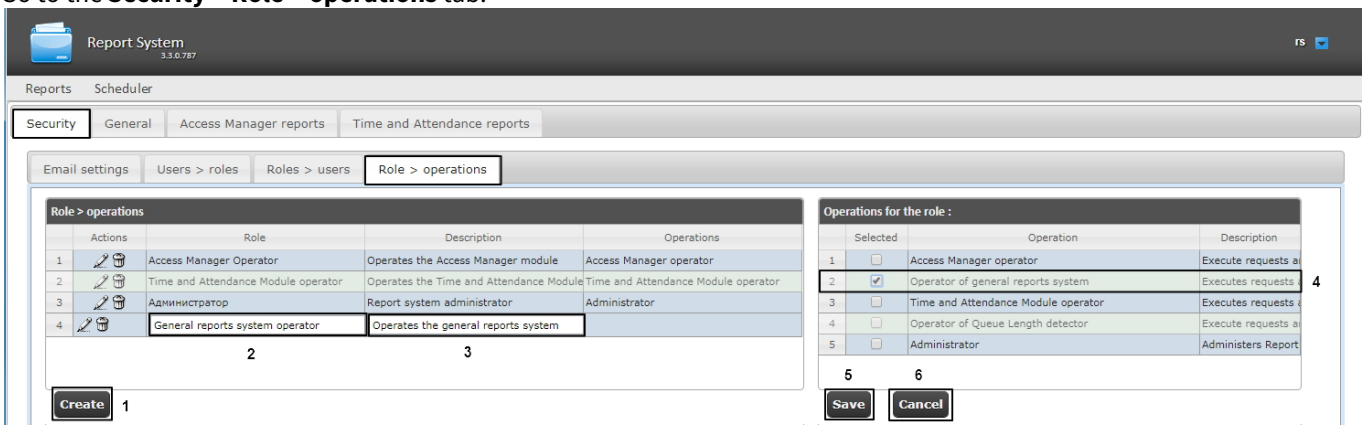
7.1.2 Set up the roles

Setting up the roles is carried out in the **Roles > operations** nested tab of the **Security** tab.

7.1.2.1 Role registration

In order to register a new role in *Intellect Web Report System* do the following:

1. Go to the **Security > Role > operations** tab.



2. Click **Create** (1).
3. As a result a new line will be added to the **Role > operations** table. Fill in its fields:
   a. In the **Description** field type a brief description of the operations that will be available to the users with a new role (3).

      Note.
      This field is optional for filling in.

   b. In the **Role** field type the name of a new role (2).
4. In the **Operations for the role** table (4) in the **Selected** column set checkboxes for those operations that should be solved by users with a new role.

   Note.
   It is recommended to study the description of operations beforehand in the **Description** column of the same table.

5. In order to register a role click **Save** (5).

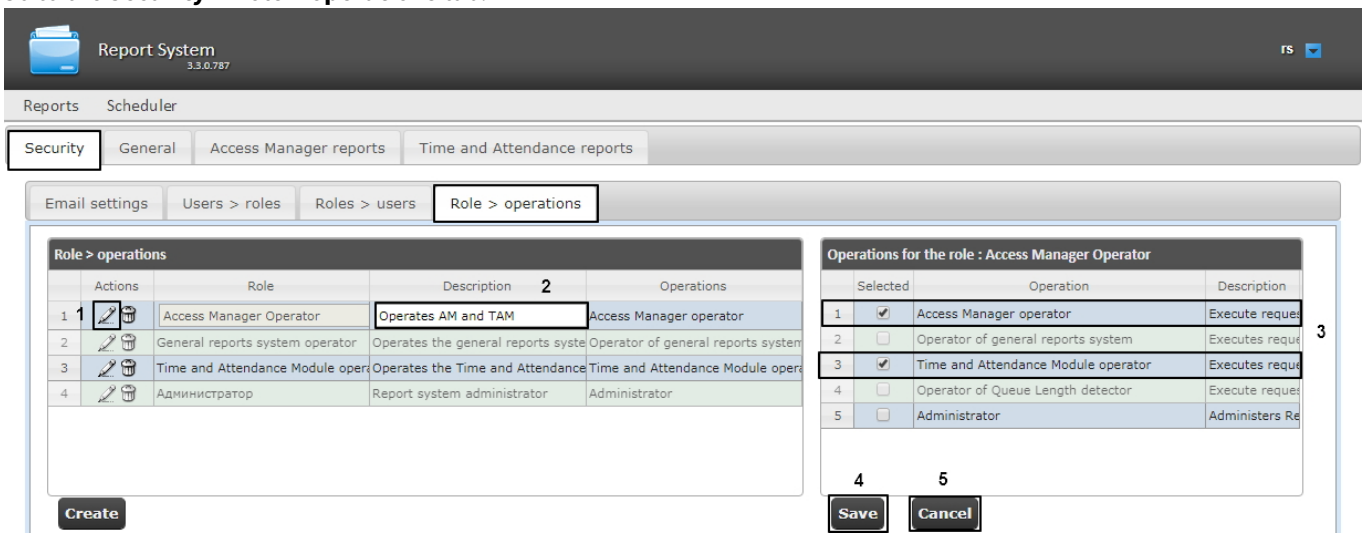
Note.
In order to cancel the registration of a new role click **Cancel** (**6**).

Role registration in *Intellect Web Report System* is completed.

7.1.2.2 Role editing

In order to edit a role do the following:

1. Go to the **Security > Role > operations** tab.



2. For the required role click button in the **Actions** column of the **Role > operations** table (1).
3. As a result you will be able to edit some role parameters. For example:
4. In the **Description** field one can edit a brief description of operations that will be available for users with this role (2).
5. In the **Operations for the role** table (3) in the **Selected** column one can edit the list of operations that should be solved by users with this role by setting or deselecting the corresponding checkboxes. In order to save the changes in role parameters click **Save** (4).

> **Note.**
> In order to cancel the changes in the role click **Cancel** (5).

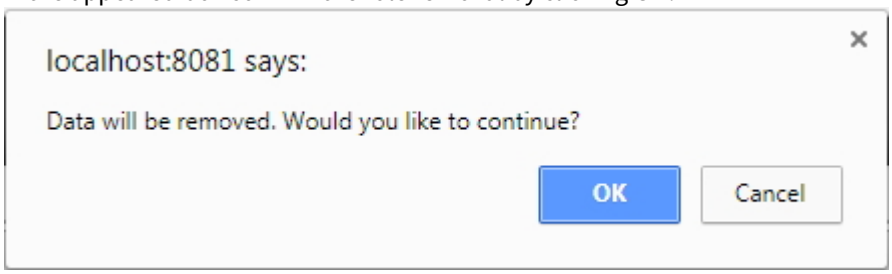
Role editing is completed.

7.1.2.3 Role removal

In order to remove the role, do the following:

1. Go to the **Security** > **Role > operations** tab.

2. For the required role click the button in the **Actions** column of the **Role > operations** table.
3. In the appeared box confirm the role removal by clicking **OK**.



Role removal is completed.

7.1.3 Configure roles and users compliance

Roles and users compliance is confugured on the **Security** tab of the administration page. It can be carried out in two ways:

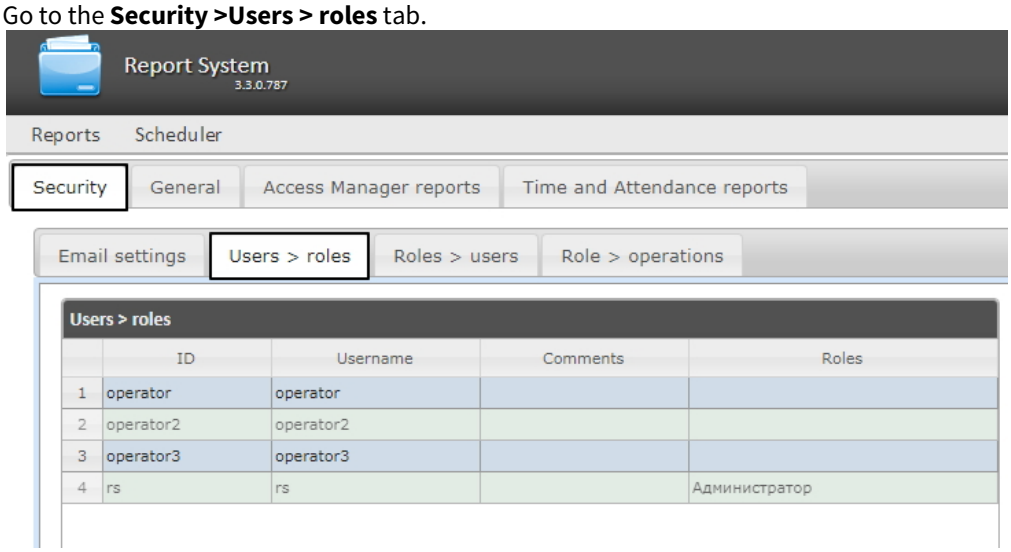
1. If the roles are assigned to a user, then the **Users > roles** tab is used.
2. If the users are added to a role, then the **Roles > Users** tab is used.

The choice of method is due to the convenience of administration.

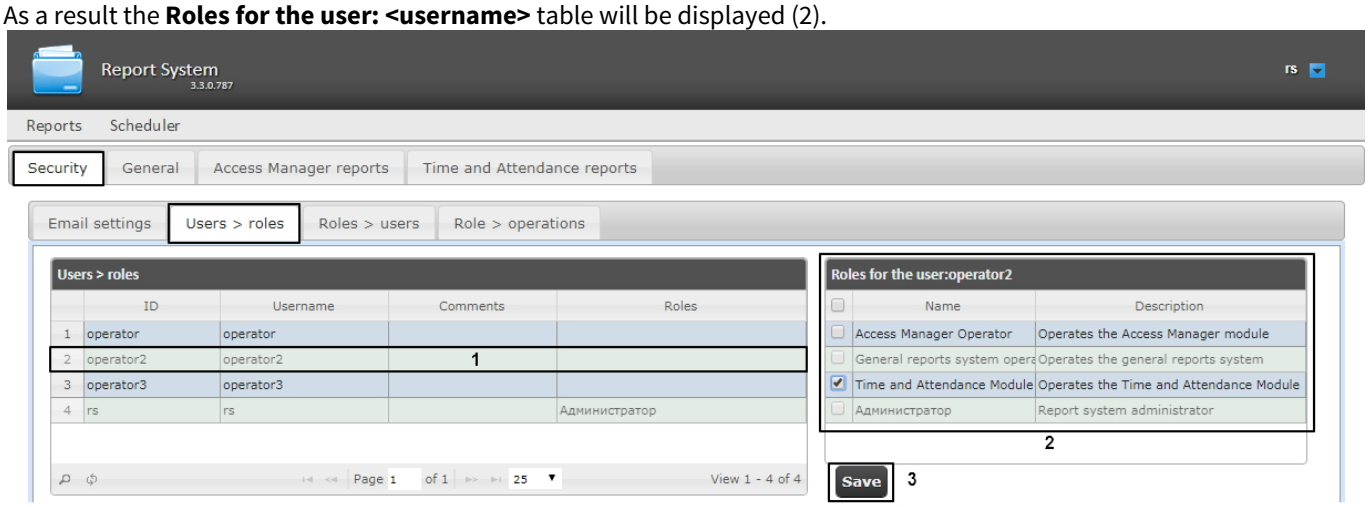
7.1.3.1 Assigning the roles to the user

In order to assign the roles to the user do the following:

1. Go to the **Security >Users > roles** tab.

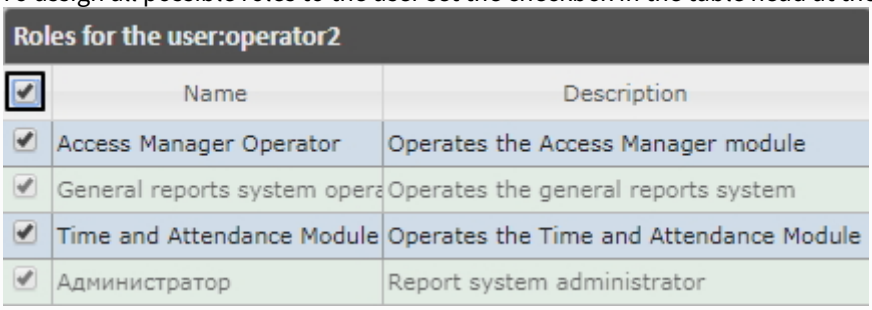


2. Left-click the required user (1).
3. As a result the **Roles for the user: <username>** table will be displayed (2).



4. Check or uncheck the required roles in the list to assign them to the selected user.

> **Note.**
> To assign all possible roles to the user set the checkbox in the table head at the **Name** field.



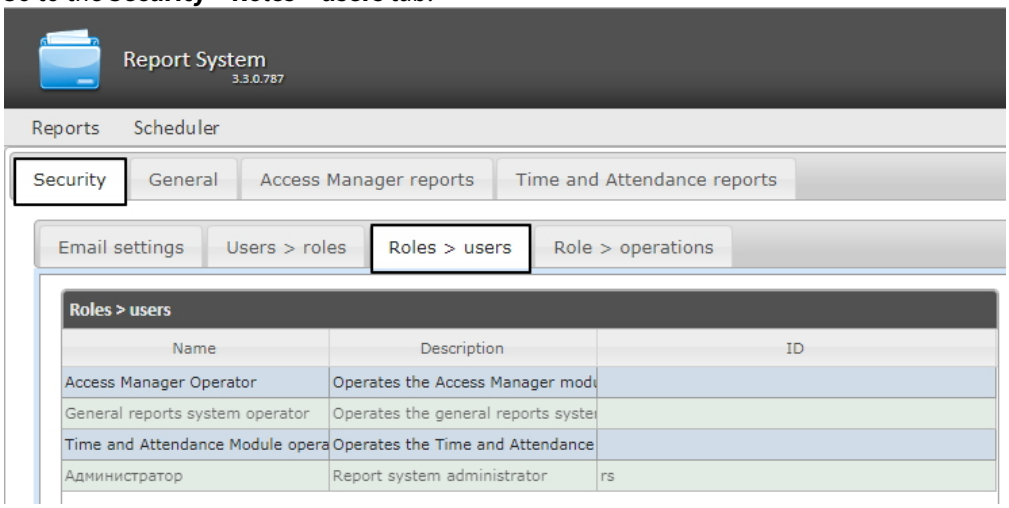
5. Click **Save** to save the changes (3).

Assigning the roles to the user is completed.

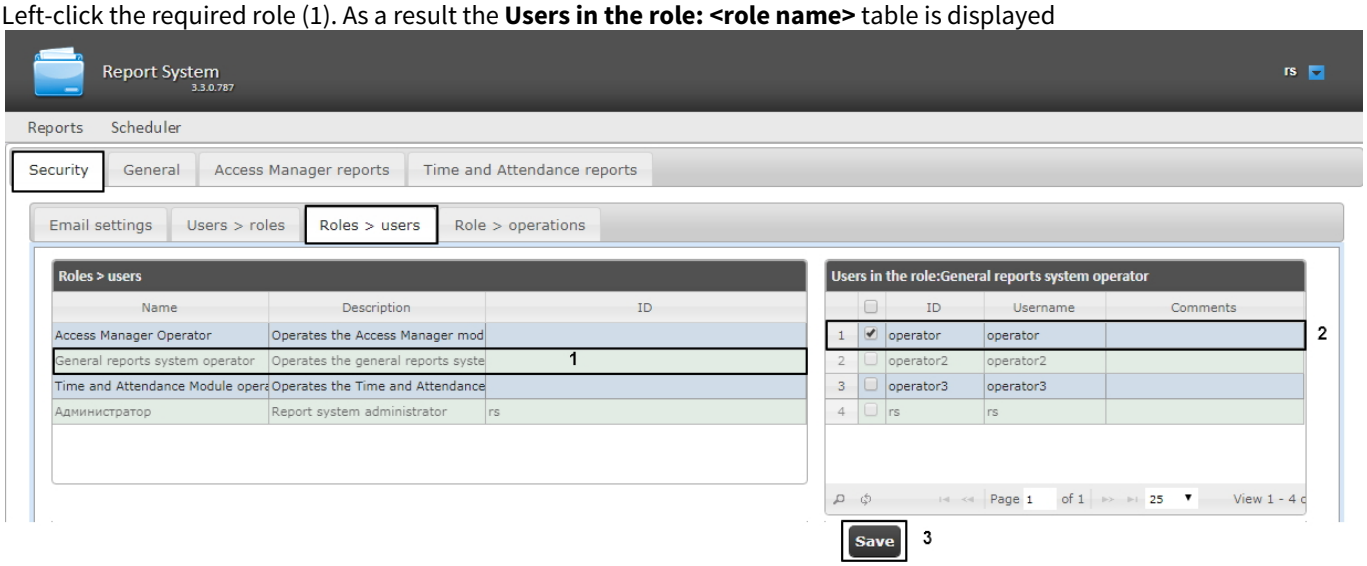
7.1.3.2 Adding the users to the role

In order to add the users to the role do the following:

1. Go to the **Security > Roles > users** tab.



2. Left-click the required role (1). As a result the **Users in the role: <role name>** table is displayed



3. Change the list of users added to the role by setting or deselecting the corresponding checkboxes (2).

> **Note.**
> To add all possible users to the role set the checkbox in the table head at the ID field.
>
> **Users in the role:General reports system operator**
>
		ID	Username	Comments
1	☑	operator	operator	
2	☑	operator2	operator2	
3	☑	operator3	operator3	
4	☑	rs	rs	

4. Click **Save** (3).

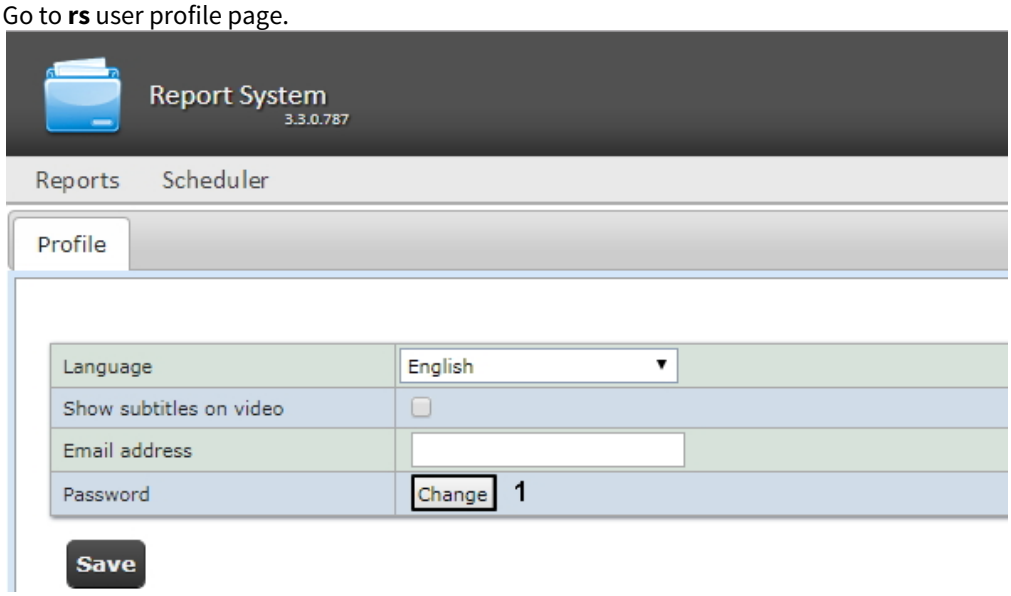
Adding the users to the role is completed.

7.1.4 Change the administrator password

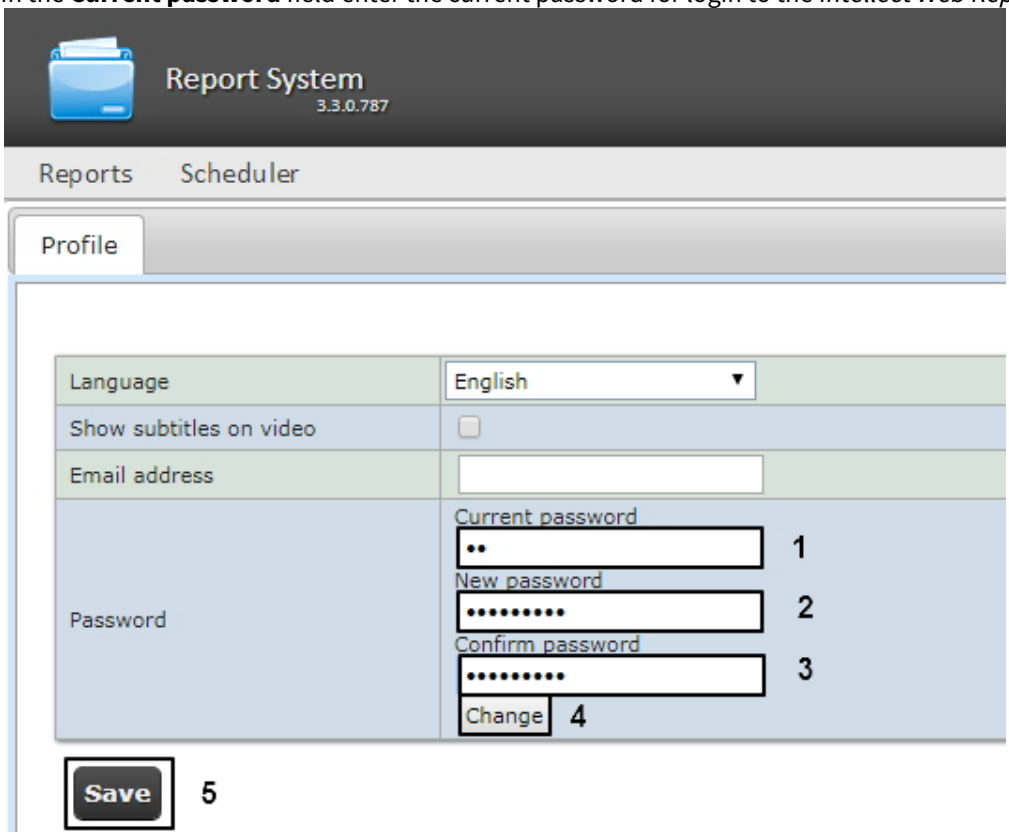
The password can be changed in the **Profile** page only for the **rs** user, which is the overall administrator of the subsytem. Password changing for other users is performed only on the **Users** tab of the *Intellect* software.

To change the password for **rs** user login to the *Intellect Web Report System* subsystem, do the following:

1. Go to **rs** user profile page.



2. In the **Password** field click the **Change** button (1).
3. In the **Current password** field enter the current password for login to the *Intellect Web Report System* (1).



4. In the **New password** field enter the new password for login to the *Intellect Web Report System* (2).
5. In the **Confirm password** field enter again the new password (3).

> **Attention!**
> The new password should contain at least 6 symbols.

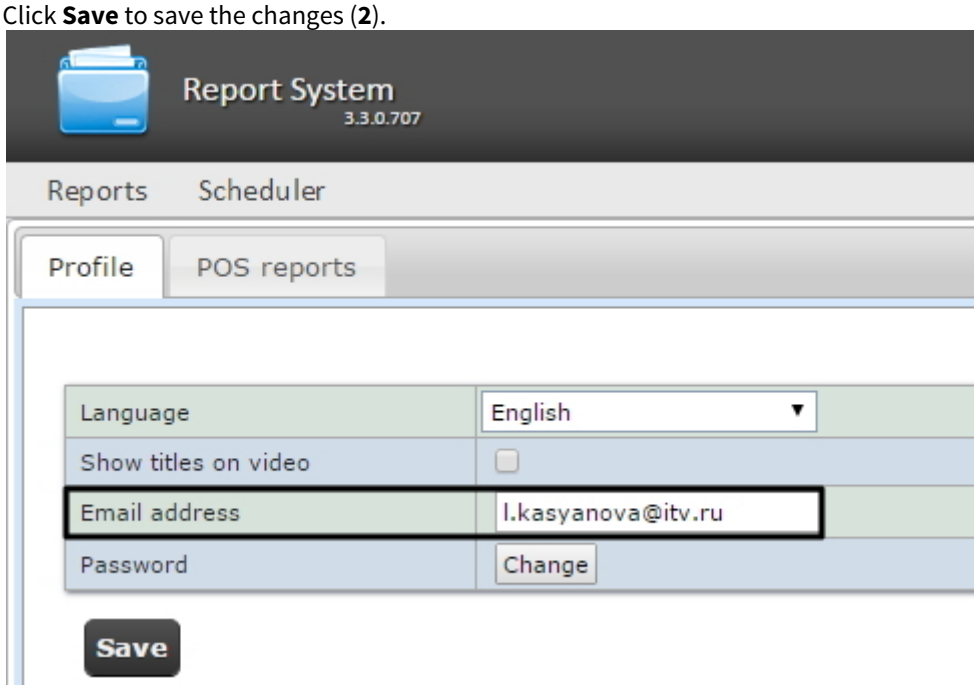
6. Click the **Change** button (4).
7. Click the **Save** button to save changes (5).

Changing the password for **rs** user is completed.

7.1.5 Setting up the user email

To set up the user email address in the *Intellect Web Report System*, do the following:

1. Switch to the user profile page.
2. Enter the email address of the current user in the **Email address** field (**1**).
3. Click **Save** to save the changes (**2**).



User email setup is complete.

7.2 Setting up Intellect Web Report System operation in the automatic mode

7.2.1 Intellect Web Report System setting up procedure in the automatic mode

Setting up the *Intellect Web Report System* operation in the automatic mode is carried out in the **Scheduler** tab on the administration page.

The following succession is recommended while setting up:

1. On the **Security** > **Email settings** tab setup the SMTP Server used for sending the auto-generated reports.

   > **Note.**
   > This step can be missed if there is no need to send the reports by e-mail in the automatic mode.

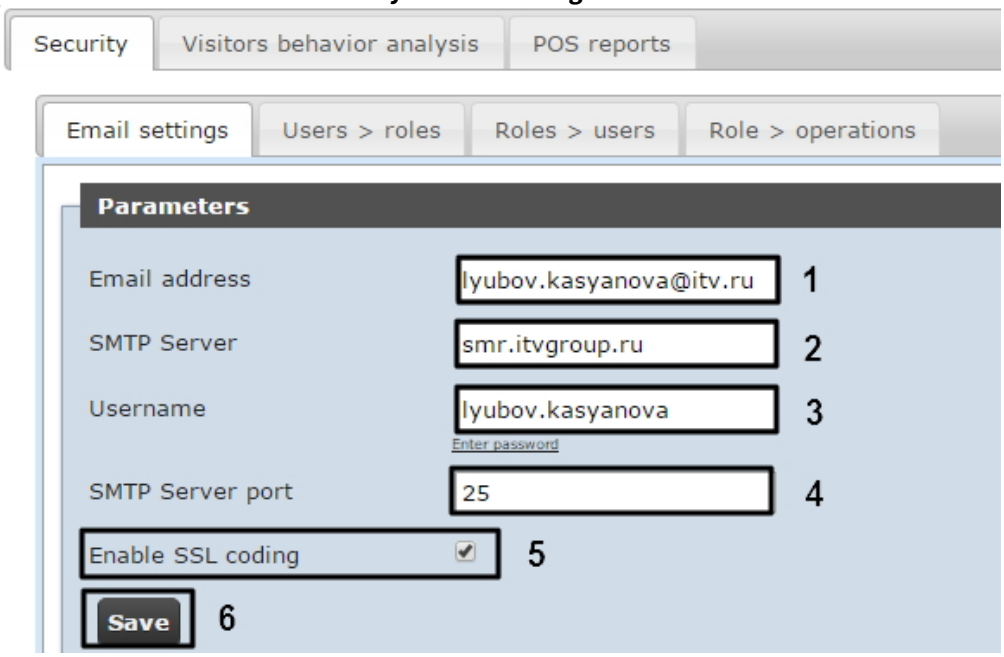
2. On the **Reports** tab create the list of auto-generated reports.
3. On the **Schedules** tab setup the schedule of *Intellect Web Report System* operation in the automatic mode.
4. On the **Tasks** tab create the tasks for auto-generating the reports. Start their execution.

7.2.2 SMTP Server setup

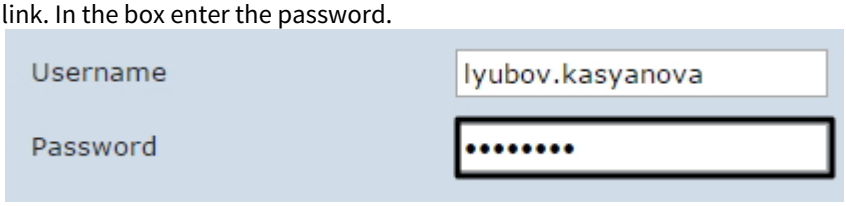
Setting up the SMTP server for sending the autogenerated reports via email is performed in the **Administration** > **Security** section.

In order to set up the SMTP server, do the following:

1. Go to the **Administration** > **Security** > **Email settings** tab.



2. In the **Email address** field (**1**) type the e-mail address from which the auto-generated reports will be sent.
3. In the **SMTP Server** field (**2**) enter the name of SMTP Server.
4. In the **Username** field (**3**) enter the name of account used for sending the messages to SMTP Server.
5. Specify the password of the account used for sending the messages to SMTP Server. For this click the **Enter password** link. In the box enter the password.



6. In the **SMTP Server port** field (**4**) enter the port number used by SMTP Server.
7. If the SSL coding is required to connect the SMTP Server then set the **Enable SSL coding** checkbox (**5**).
8. Click **Save** (**6**).

SMTP Server setup for autogenerated reports sending via email is completed.

7.2.3 Auto-generated reports setup

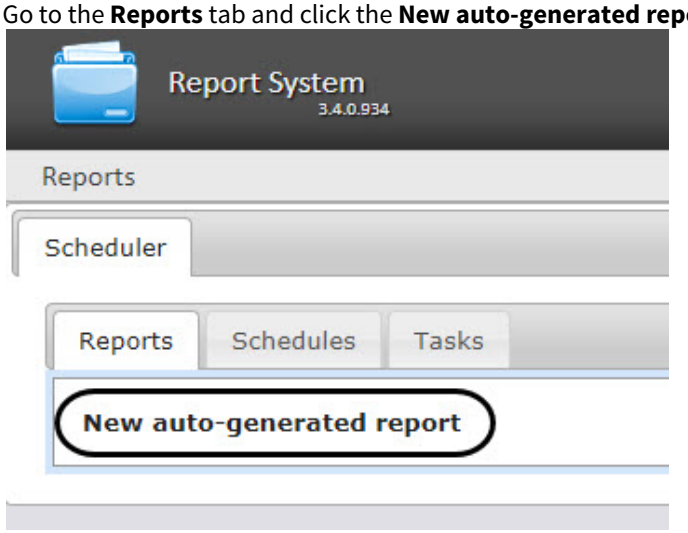
One can assign and setup the reports that will be auto-generated on the schedule.

> **Note.**
> Schedule setup is given in details in Setting up the schedule of operation in the automatic mode. The connection between the report and the schedule element is setup at the final stage when the task is created (see the Setting up the automatically executed tasks chapter).
>
> Auto-generated scheduled reports may be created by the adminisrator of the system (the **rs** user), as well as by ordinary users, given that they have the roles with the required operations.

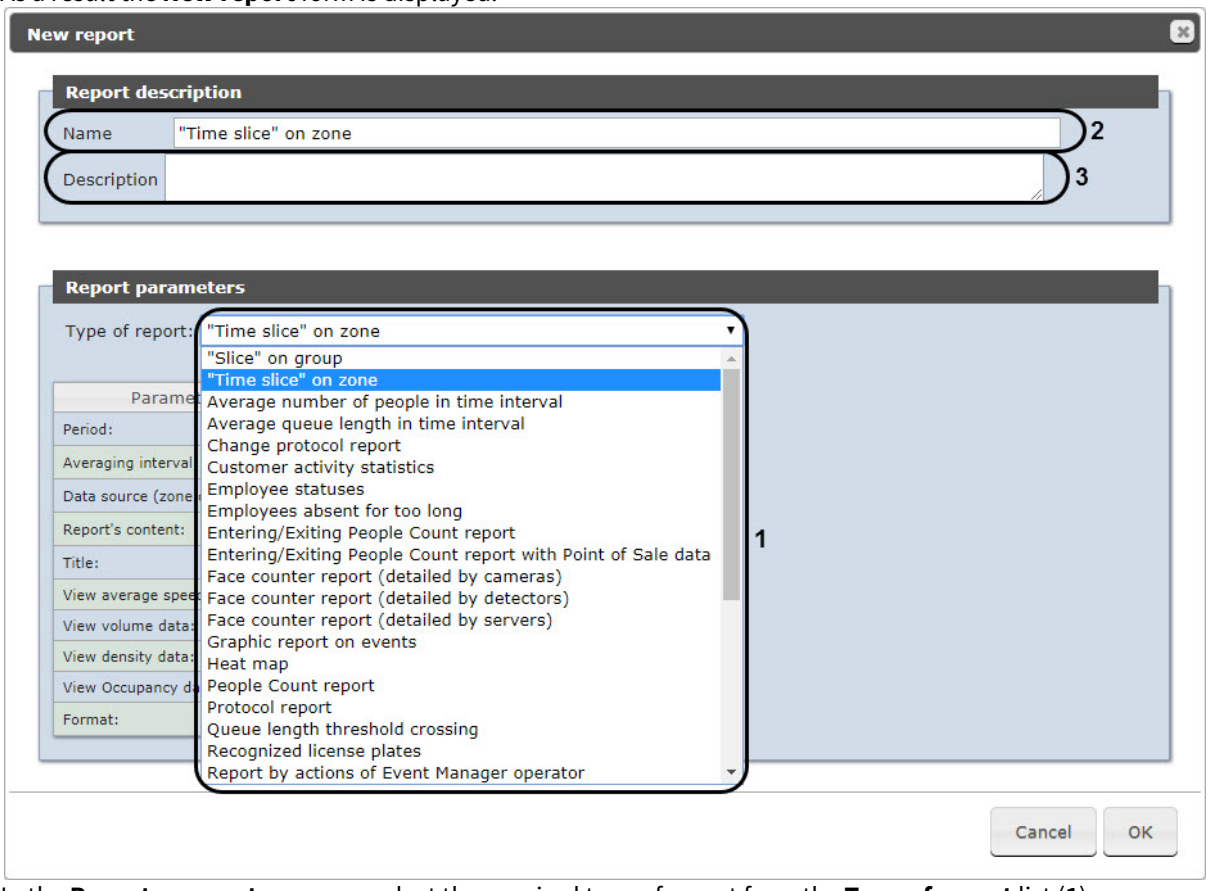
7.2.3.1 Creating the report

Make an auto-generated report as follows:

1. Go to the **Reports** tab and click the **New auto-generated report** link.



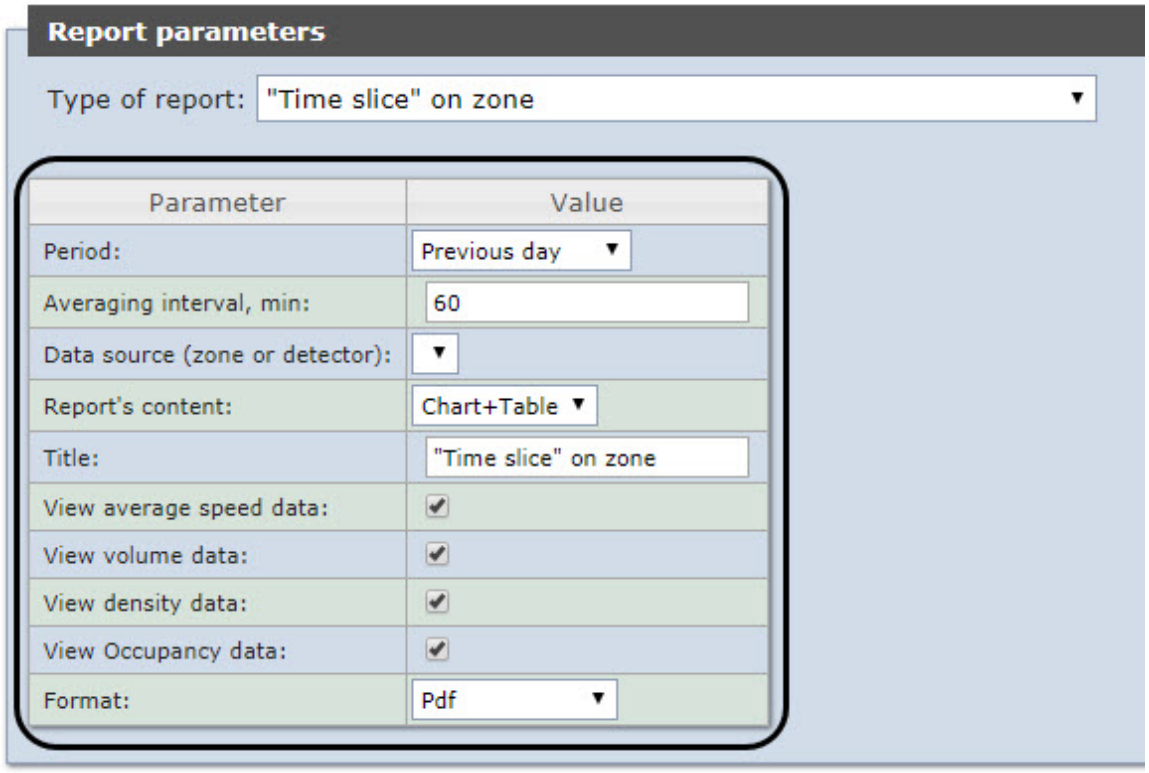
2. As a result the **New report** form is displayed.



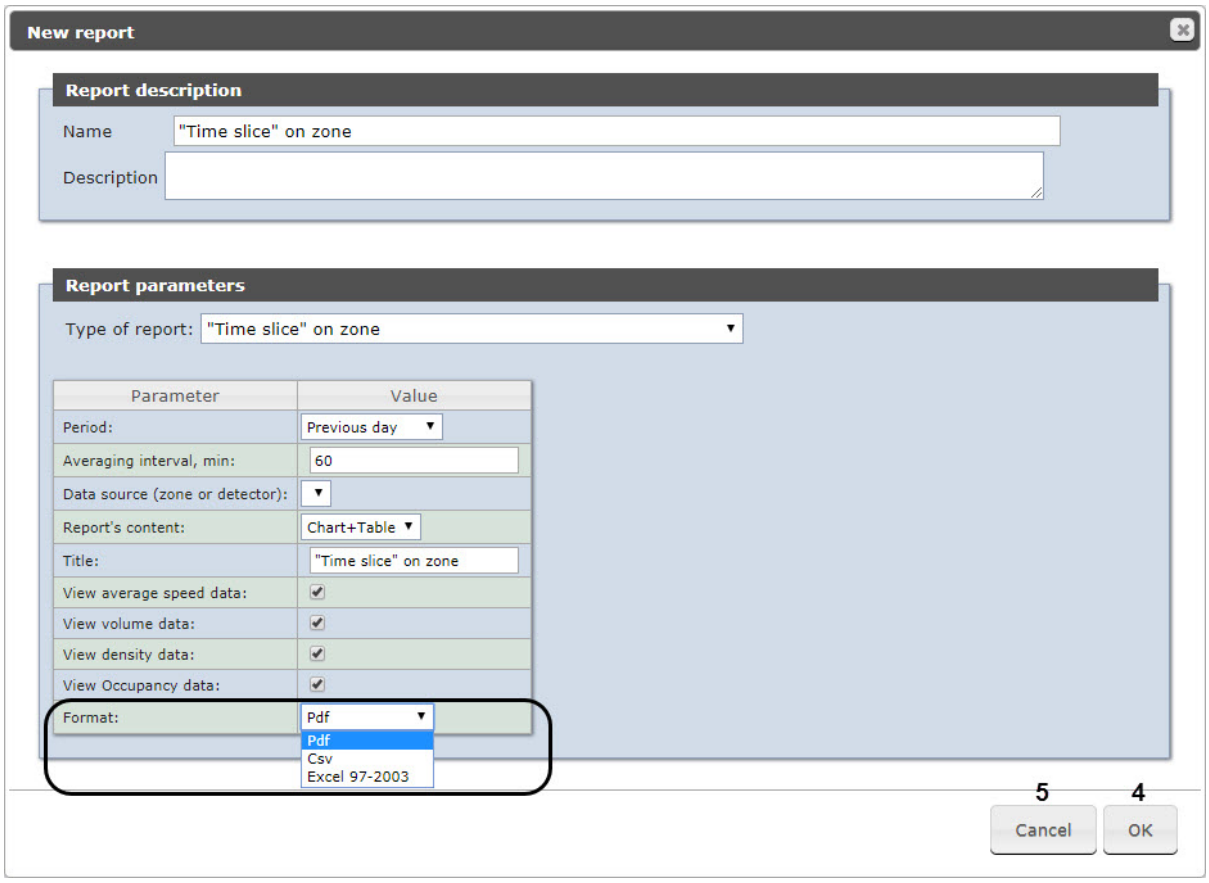
3. In the **Report parameters** group select the required type of report from the **Type of report** list (**1**).
4. In the **Name** field (**2**) of the **Report description** group the prior report name is displayed automatically. It can be edited if necessary.
5. In the **Description** field (**3**) of the **Report description** group specify the description of the report contents.

> **Note**
> This field is optional.

6. Set the report parameters in the **Report parameters** group.



Note
The list of parameters is individual for every type of report and the same as the list of parameters of the corresponding report when working with reports (see Working with Intellect Web Report System) with one exeption: the **Format** parameter is available - in its dropdown list it is possible to select the required format of saving the report.



> **Note**
> The contents of the **Format** dropdown list depends on the type of the selected report (see item 3). The following formats are supported:
> - PDF:
> - Csv:
> - Excel 97-2003:
> - Excel 2007.

7. In order to save the description and new report parameters click **OK** (**4**).

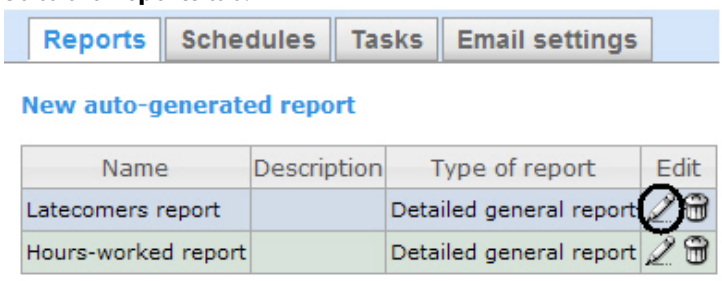
> **Note**
> In order to cancel making the report click **Cancel** (**5**).

Making the auto-generated report is completed.

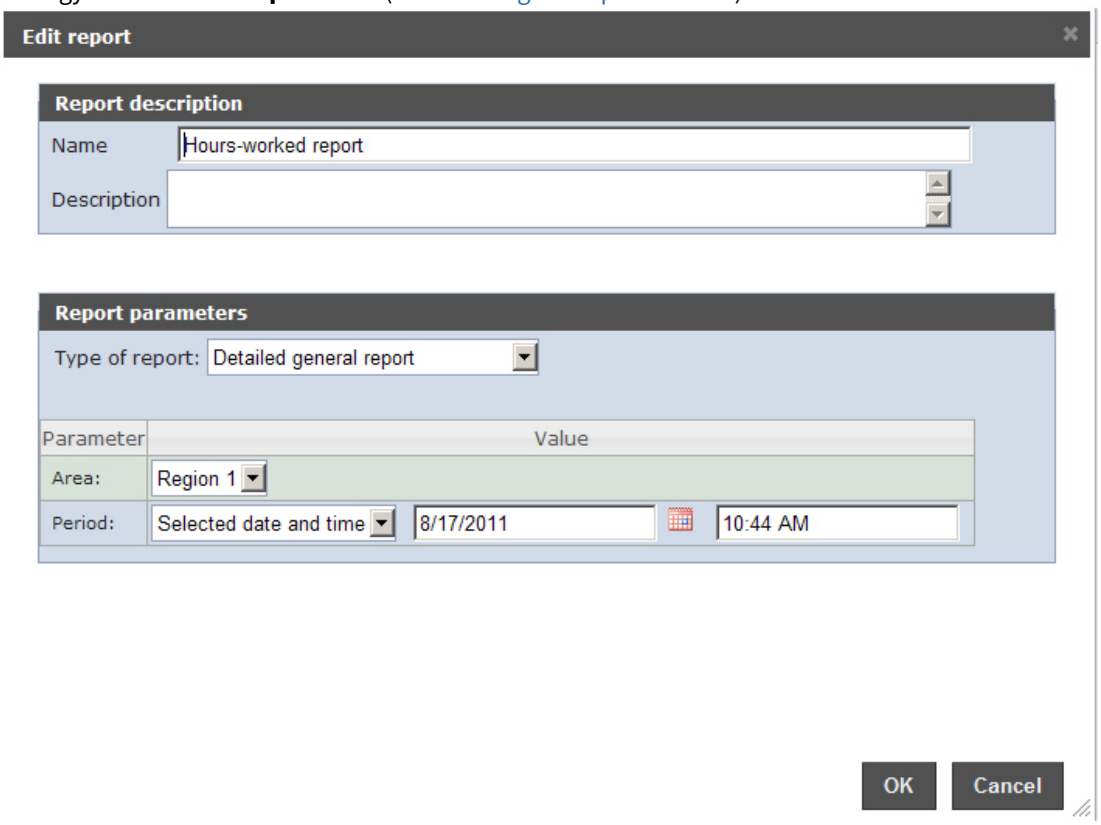
7.2.3.2 Editing the report

In order to edit the auto-generated report do the following:

1. Go to the **Reports** tab.



2. Click for the required report in the **Edit** column**.**
3. As a result the **Edit report** form is displayed**.** In this form one should edit the description and report parameters by analogy with the **New report** form (see Creating the report section).



4. In order to save the report changes click **OK**.

> **Note.**
> In order to cancel the report changes click **Cancel**.

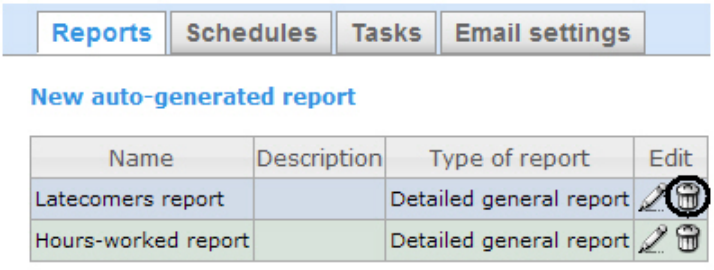
In order to change the language of the auto-generated report select the corresponding language in the profile page of the *rs* user (see User profile page section).

Editing the auto-generated report is completed.

7.2.3.3 Deleting the report

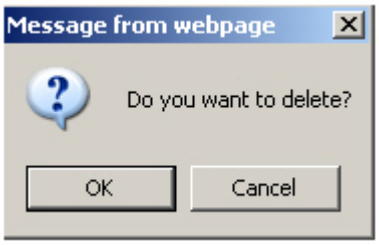
In order to delete the auto-generated report do the following:

1. Go to the **Reports** tab.



2. Click for the required report in the **Edit** column.

3. In the appeared window confirm the report deleting by clicking **OK.**



Deleting the auto-generated report is completed.

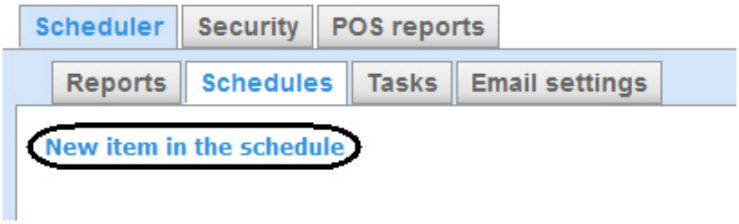
7.2.4 Setting up the schedule of operation in the automatic mode

Setting up the schedule of *Intellect Web Report System* operation in the automatic mode is performed by creating the schedule items. Later on any of created items in the schedule can be used while creating the task that should be executed in the automatic mode (see Setting up the automatically executed tasks section).

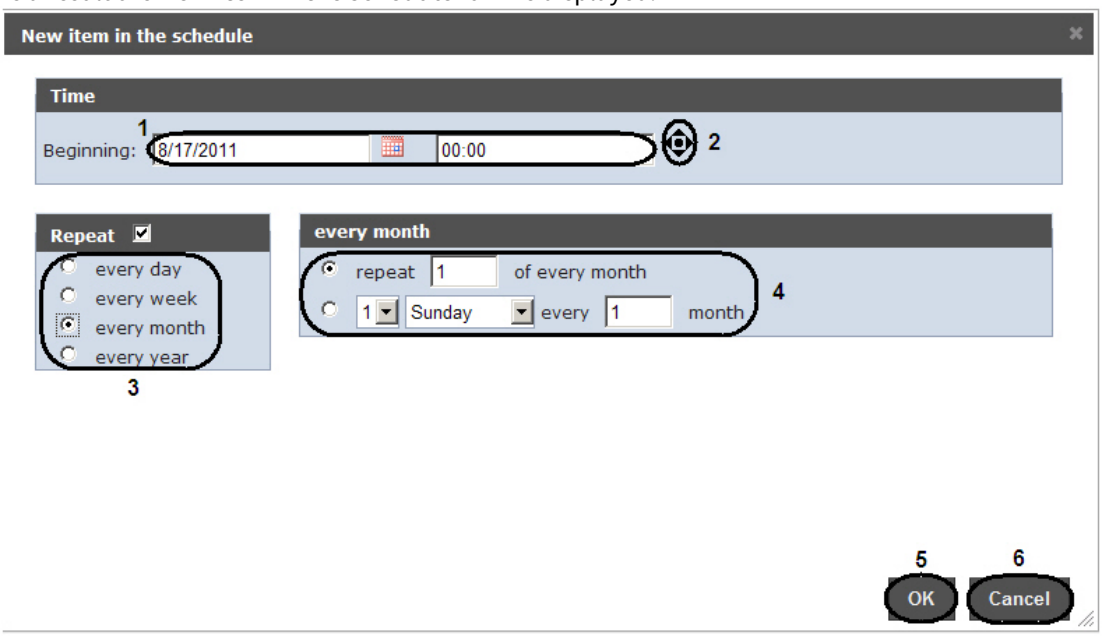
7.2.4.1 Creating the schedule item

In order to create the schedule item do the following:

1. Go to the **Schedules** tab.



2. Click the **New item in the schedule** link.
3. As a result the **New item in the schedule** form is displayed.



4. In the **Time** group (**1**) enter the instant approaching which the required reports will be generated automatically.

> **Note.**
> The selection of required reports will be performed when the tasks are created (see Setting up the automatically executed tasks section).

> **Note.**
>
> In order to set current time it is convenient to use button (**2**).

5. If the reports should be generated regularly since the specified instant then in the **Repeat** group set the checkbox in the boxes of required generation period (**3**).
6. As a result the tweaking form of strategy for repeating is displayed (**4**). The procedure of filling it in is clear.
7. In order to save the schedule item click **OK** (**5**)**.**

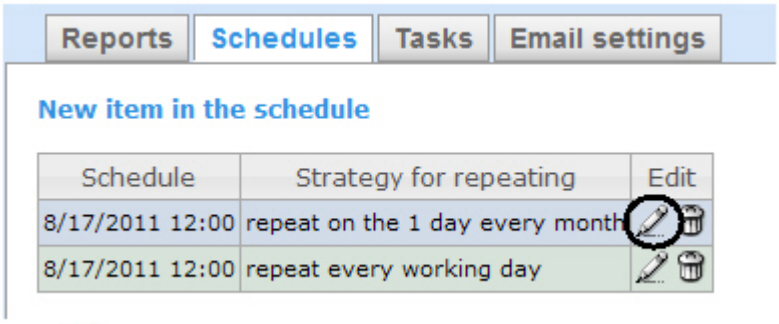
> **Note.**
> In order to cancel creating of the schedule item click **Cancel** (**6**).

Creating the schedule item is completed.

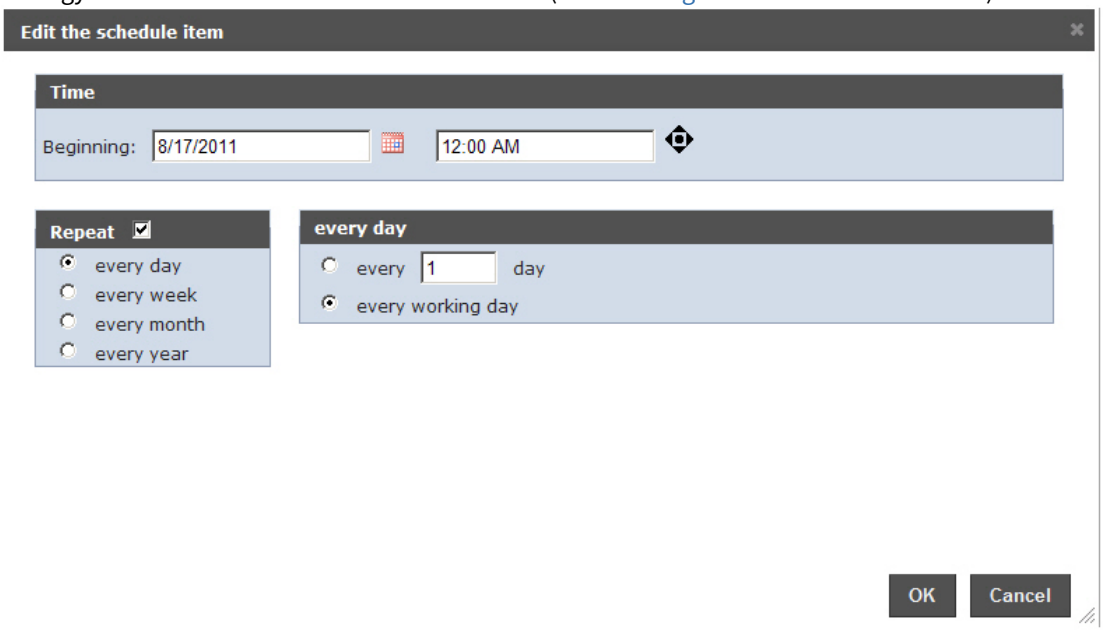
7.2.4.2 Editing the schedule item

In order to edit the auto-generated report do the following:

1. Go to the **Schedules** tab.



2. Click for the required schedule item in the **Edit** column**.**
3. As a result the **Edit the schedule item** form is displayed**.** In this form one should edit the schedule item parameters by analogy with the **New item in the schedule** form (see Creating the schedule item section).



4. In order to save the changes in the schedule item click **OK.**

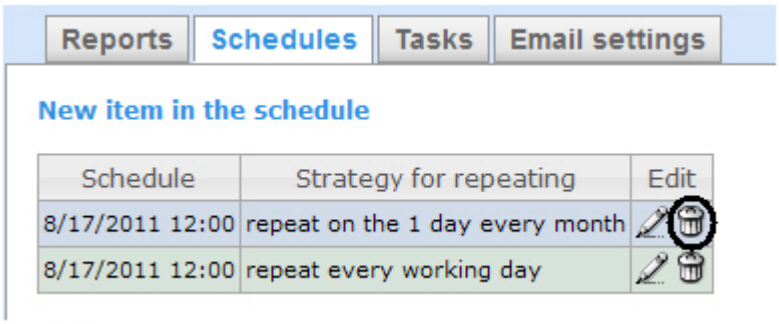
> **Note.**
> In order to cancel the changes in the schedule item click **Cancel**.

Editing the schedule item is completed.

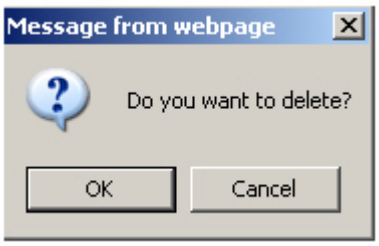
7.2.4.3 Deleting the schedule item

In order to delete the schedule item do the following:

1. Go to the **Schedules** tab.



2. Click for the required schedule item in the **Edit** column.
3. In the appeared window confirm the schedule item deleting by clicking **OK.**



Deleting the schedule item is completed.

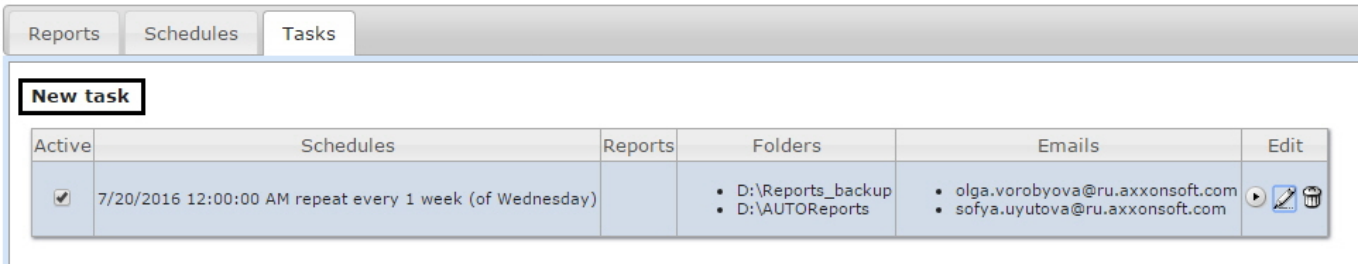
7.2.5 Setting up the automatically executed tasks

If the required reports should be auto-generated according to the specified schedule then it is necessary to create, set up and run a task.

7.2.5.1 Creating the task

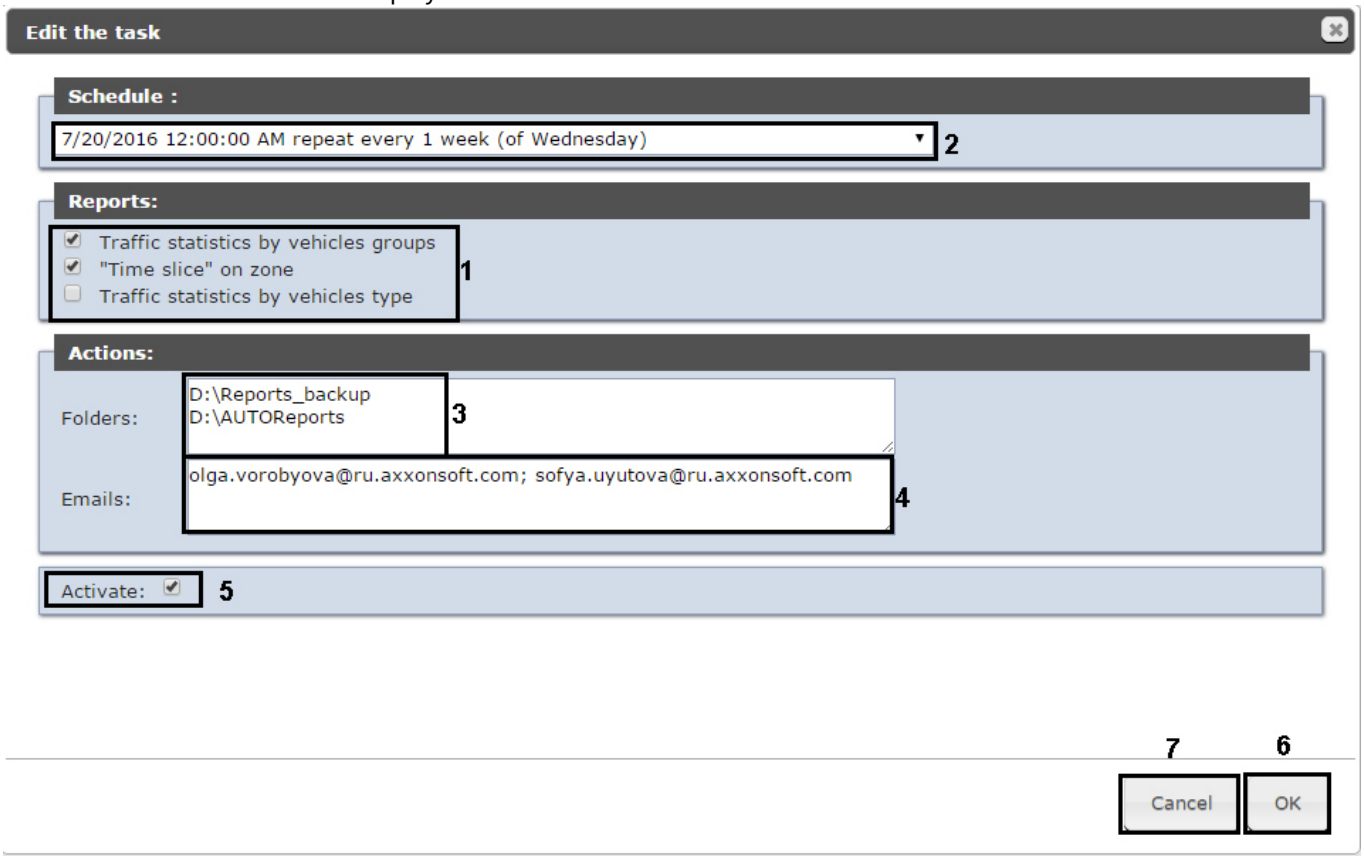
In order to create the auto-executed task do the following:

1. Go to the **Tasks** tab.



2. Click the **New task** link.

3. As a result the **New task** form is displayed.



4. In the **Reports** group (**1**) select the reports that should be auto-generated by setting the checkboxes.
5. From the **Schedule** list (**2**) select the schedule according to which the selected reports should be generated.
6. In the **Actions**group set up at least one action with the reports:
   6.1 In the **Foldres** field (**3**) enter the path for the folders where the generated reports should be stored. Use Enter key as a separator, i.e. there is a certain line for every folder.
   6.2 In the **Emails** field (**4**) enter the email addresses to which the generated reports should be sent. Use ";" sign as a separator.

> **Note.**
> Generated reports that are sent to emails are PDF and XLS files.

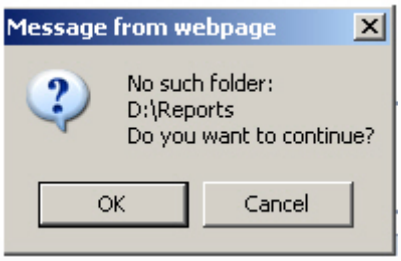
7. In order to run the task execution right after its creation set the **Activate** checkbox (**5**).

> **Note.**
> Later one can run the task execution at any moment (see the Running and stopping the task execution section).

8. In order to save the task parameters click **OK** (**6**).

> **Note.**
> In order to cancel the task creation click Cancel (**7**).

Note.
If there are no folders that are set at 6.1 step then the following message is displayed when the task parameters are saved. In order to auto create folders click OK.



Creating the automatically executed task is completed.

7.2.5.2 Checking the task execution

One can check the task execution at any time without taking into account the selected schedule. For this do the following:

1. Go to the **Tasks** tab.

2. For the required task click in the **Edit** column.
3. Reports specified in the task will be generated and saved in the folders and/or sent to the e-mail addresses. If it is not happening one should check whether the actions with reports are set up correctly (see Creating the task section).

Checking the task execution is completed.

7.2.5.3 Running and stopping the task execution

One can run and stop the task execution without editing them. For this do the following:

1. Go to the **Tasks** tab.

2. In the **Active** column set the checkboxes checked for the tasks that should be run and unchecked for the tasks that should be stopped.

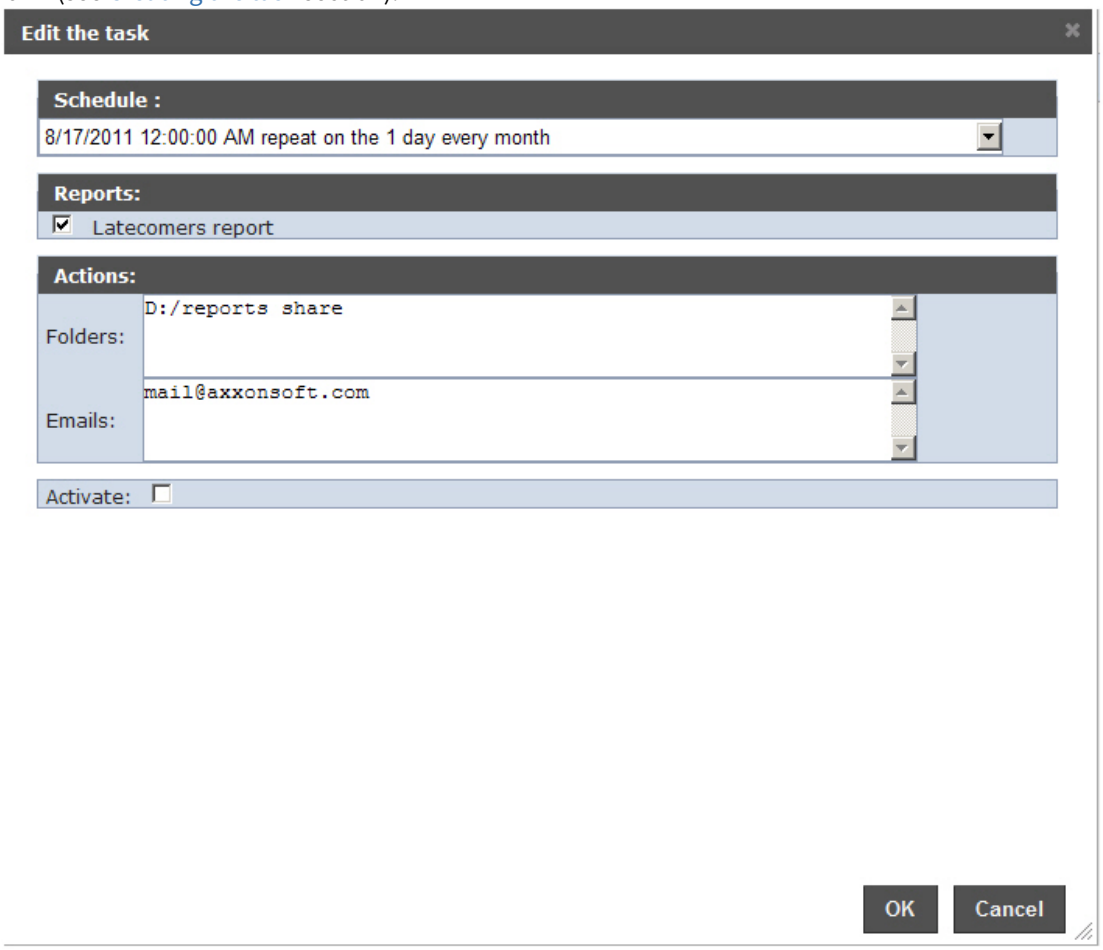
Running or/and stopping the task execution are completed.

7.2.5.4 Editing the task

In order to edit the auto-executed task do the following:

1. Go to the **Tasks** tab.

2. For the required task click in the **Edit** column**.**
3. As a result the **Edit the task** form is displayed**.** The task parameters should be changed by analogy with the **New task** form (see Creating the task section).



4. In order to save the changes click **OK.**

> **Note.**
> In order to cancel the changes in the task click **Cancel**.

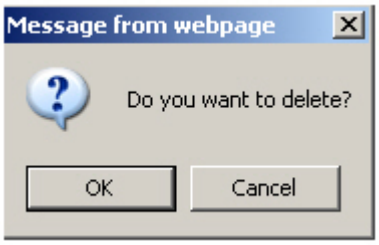
Editing the auto-executed task is completed.

7.2.5.5 Deleting the task

In order to delete the task do the following:

1. Go to the **Tasks** tab.

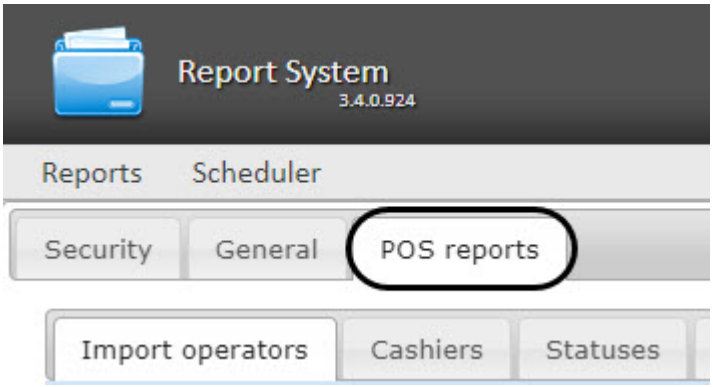
2. For the required task click in the **Edit** column.
3. In the appeared box confirm the task deleting by clicking **OK.**



Deleting the task is completed.

7.3 Setting up the POS reports

Setting up the POS reports is performed in the **POS reports** tab on the administration page.



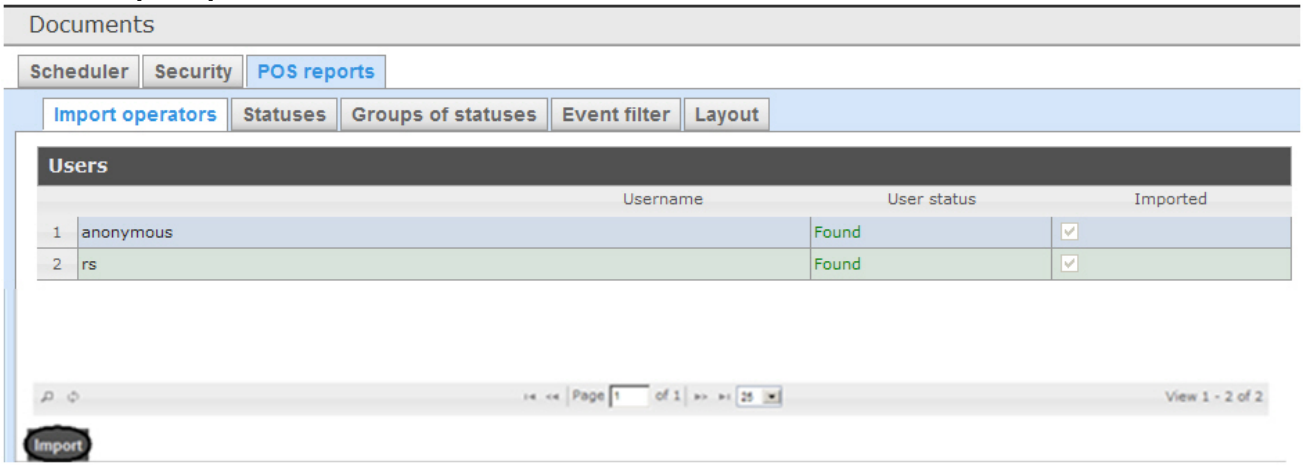
7.3.1 Creating the list of POS operators

The user that is not in the list of POS operators can not change statuses of POS events in reports whether he has the **POS expert** role or not (see Set up the roles and users section).

The list of POS operators is empty by default. In order to fill it in it is necessary to import users from the general list of *Intellect Web Report System* users.

In order to import users do the following:

1. Go to the **Import operators** tab.



2. The list of users registered in *Intellect Web Report System* including those who do not have the rights of POS operator or POS expert, is displayed. If the user is imported into the list of POS operators then there will be the checked checkbox in the **Imported** column.
3. In order to import remaining users click **Import**.

Users import into the list of POS operators is completed.

7.3.2 Setting up the cashiers in the POS reports

Содержание страницы

- Setting up the cashiers list
- Setting up the new cashiers

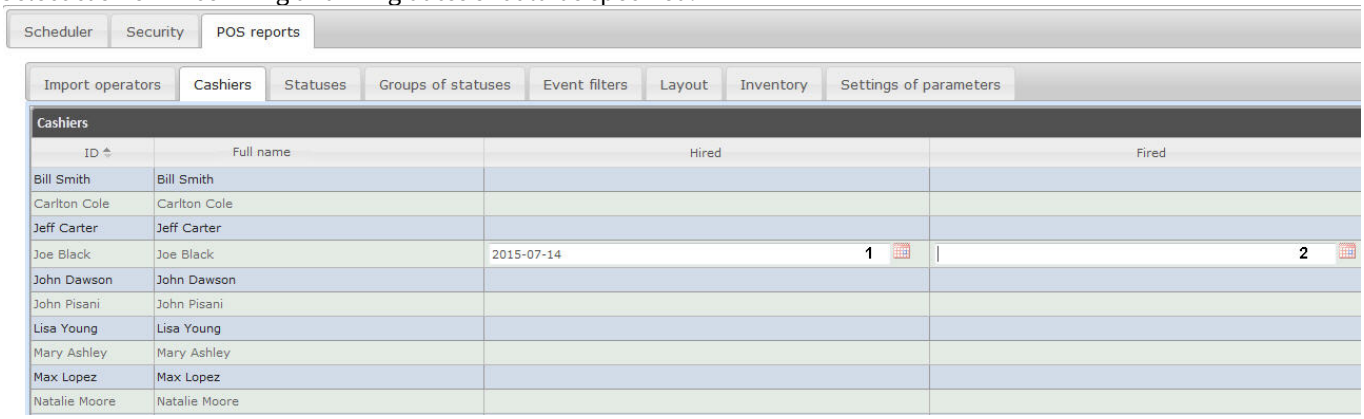
7.3.2.1 Setting up the cashiers list

The list of all cashiers from the database is displayed in the **Cashiers** tab.

To display only the working cashiers in the settings panel of the cashiers report or the potential violations report, it is possible to specify the cashiers' hiring and firing dates. In this case, the fired cashiers will not be available for selection when building the report.

To do this:

1. Go to the **Cashiers** tab.
2. Select cashier whos hiring and firing dates should be specified.



3. Specify the hiring using the **Calendar** tool in the area (**1**).
4. Specify the firing date using the **Calendar** tool in the area (**2**).

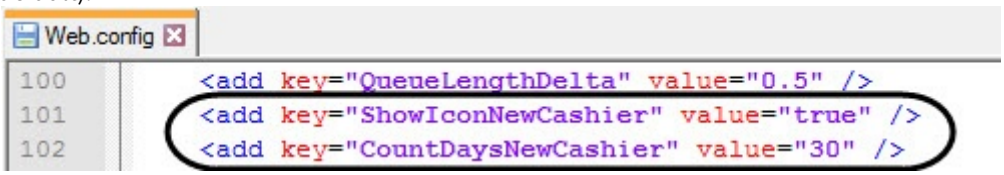
7.3.2.2 Setting up the new cashiers

In **POS** reports, you can highlight the new cashiers who work less than a specified number of days. To do this:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. Set the **true** value for the **ShowIconNewCashier** key to highlight the new cashier's name with the asterisk and the different color.

   > **Note**
   > The default key value is **true**. If you set the **false** value, the new cashiers will not be highlighted in the **POS** reports.

4. For the **CountDaysNewCashier** key, set the number of days within which the cashier is considered a new one (30 days by default).

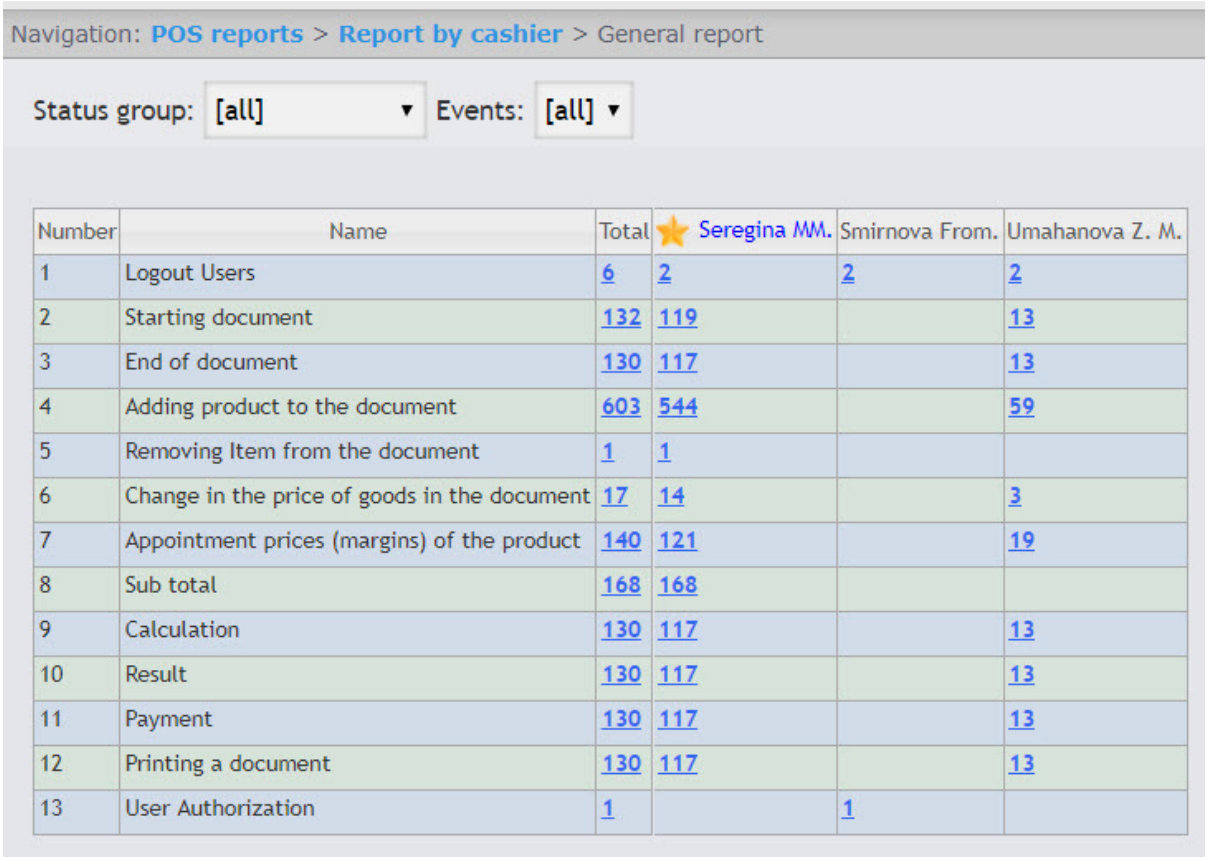


5. Save the changes in the **Web.config** file.

   > **Attention!**
   > The **Web.config** file configuration must be performed on the computer where it is planned to work with the **POS** reports.

   > **Note**
   > For the new cashiers, the date of hiring should be specified.

As a result, when generating **POS** reports, the new cashiers' names will be highlighted with the asterisk and the different color. See the example below:



Number	Name	Total	Seregina MM.	Smirnova From.	Umahanova Z. M.
1	Logout Users	6	2	2	2
2	Starting document	132	119		13
3	End of document	130	117		13
4	Adding product to the document	603	544		59
5	Removing Item from the document	1	1		
6	Change in the price of goods in the document	17	14		3
7	Appointment prices (margins) of the product	140	121		19
8	Sub total	168	168		
9	Calculation	130	117		13
10	Result	130	117		13
11	Payment	130	117		13
12	Printing a document	130	117		13
13	User Authorization	1		1	

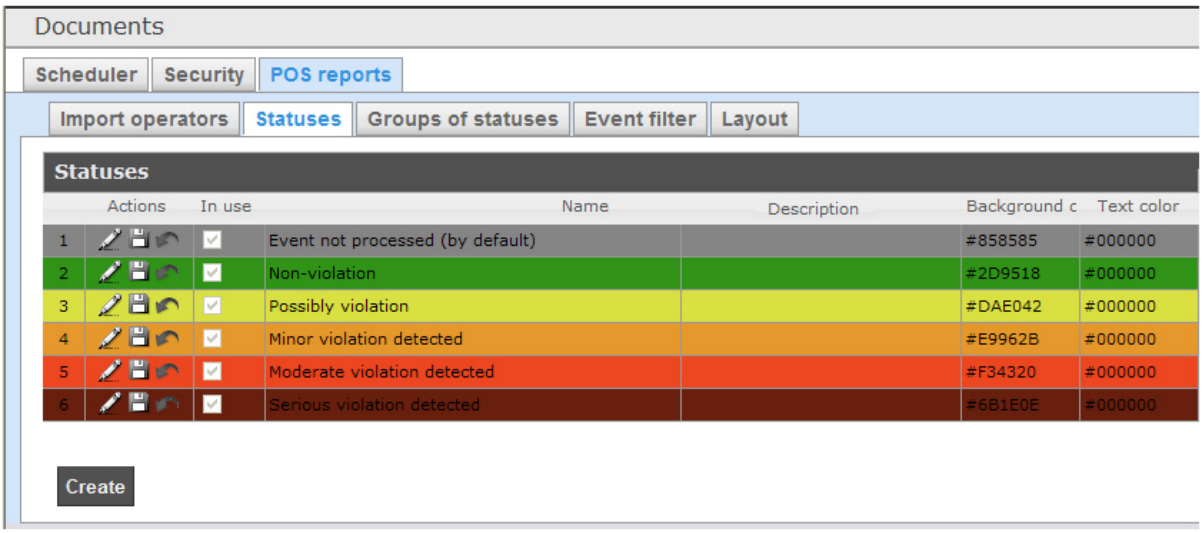
7.3.3 Setting up the statuses of POS events

Every POS event has the status. By default all POS events have the **Event not processed** status. In order to change this status POS operator should be added to the **POS expert** role.

> **Note.**
> This role allows changing the statuses of events repeatedly.

The following statuses processed by the operator of POS events are already registered in *Intellect Web Report System*:

1. Non- violation.
2. Possibly violation.
3. Minor violation detected.
4. Moderate violation detected.
5. Serious violation detected.

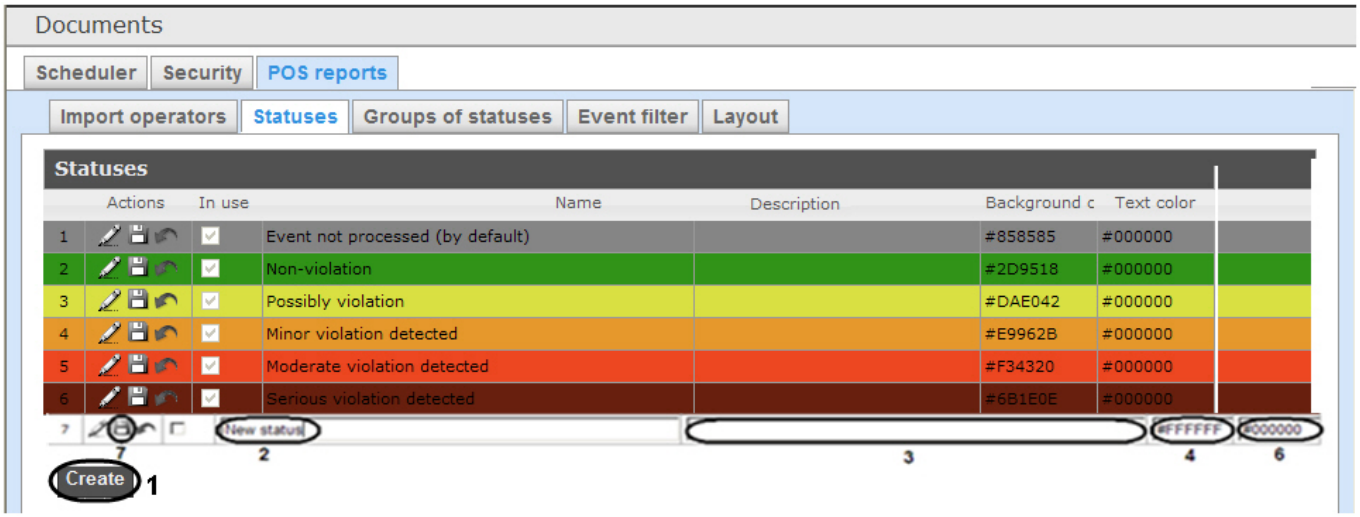


One can create user statuses and edit all existing ones.

7.3.3.1 Creating the user status

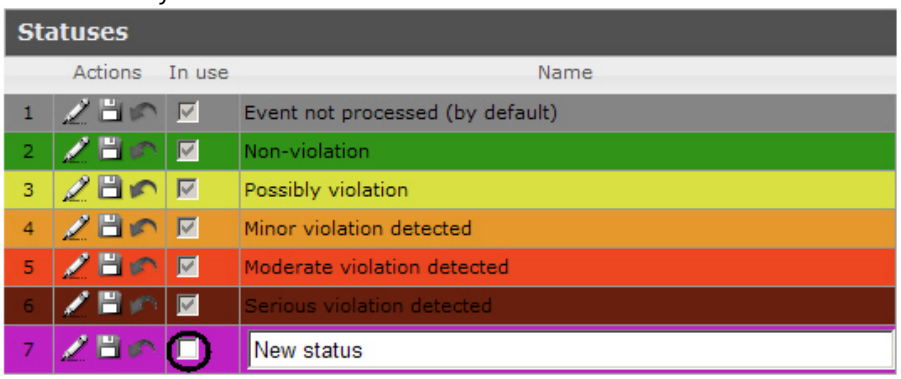
In order to create the user status do the following:

1. Go to the **Statuses** tab.



2. Click **Create** (**1**).
3. As a result a new line is added to the **Statuses** table.
4. In the **Name** field (**2**) enter a status name.
5. In the **Description** field (**3**) enter a short status description.
6. Set a color in which the line with event when it is moved to the created status will be colored. For this enter HTML color code in the **Background color** field (**4**) or use a color selection window.
   In the latter case left-click in the **Background color** field (**4**) and set the necessary color in the appeared window (**5**). For setting a color one can use both a color palette and RGB/HSB/HTML codes. In order to apply a color to a status and close a color selection window click .
7. By analogy with the step 6 set a color in which the text of event when it is moved to the created status will be colored (**6**).

8. If it is necessary to use the status after its creation then set the checkbox checked in the **In use** column.



> **Note.**
> One can both activate and deactivate the status afterwards when it is edited (see Editing the status section).

9. In order to save the status click (**7**) in the **Actions** column.

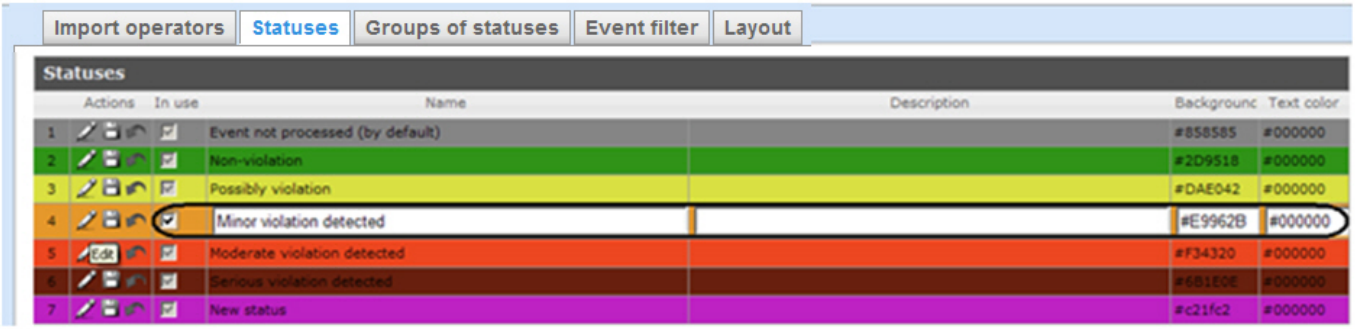
> **Note.**
> In order to cancel the status creation click in the same column.

User status creating is completed.

7.3.3.2 Editing the status

In order to edit a status do the following:

1. Go to the **Statuses** tab.



2. Click for a required status in the **Actions** column.
3. As a result it will be possible to edit a status. The editing procedure of any status is similar to creating the user status (see Creating the user status section).
4. In order to save the status changes click in the **Actions** column.

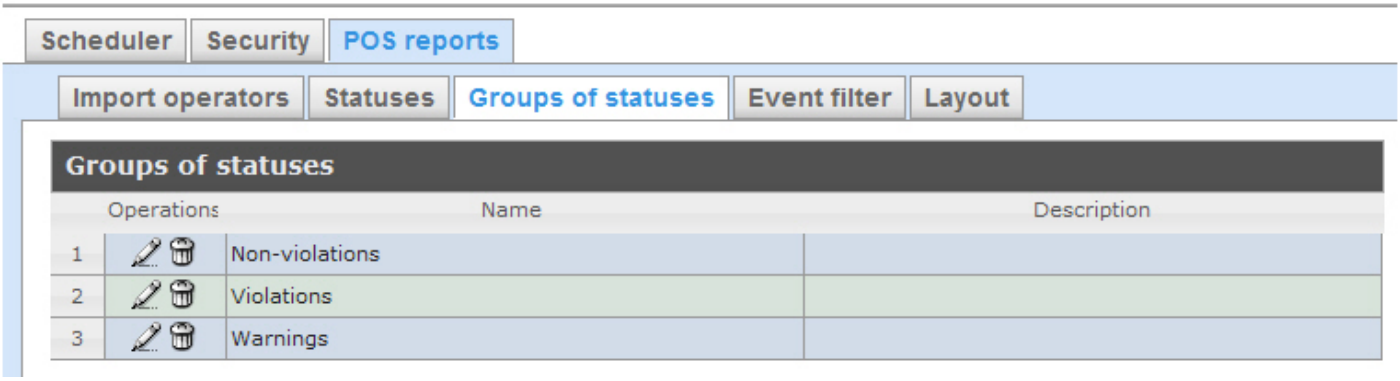
> **Note.**
> In order to cancel the changes in the status click in the same column.

Status editing is completed.

7.3.4 Setting up the groups of statuses of POS events

One can group statuses of POS events on the basis of one or another feature to make *Intellect Web Report System* more convenient to use. Created groups are used for making reports.

Setting up the groups of statuses of POS events is carried out in the **Groups of statuses** tab.



By default three groups of statuses of POS events are already created in *Intellect Web Report System*.

Groups of statuses of POS events are presented in the following table.

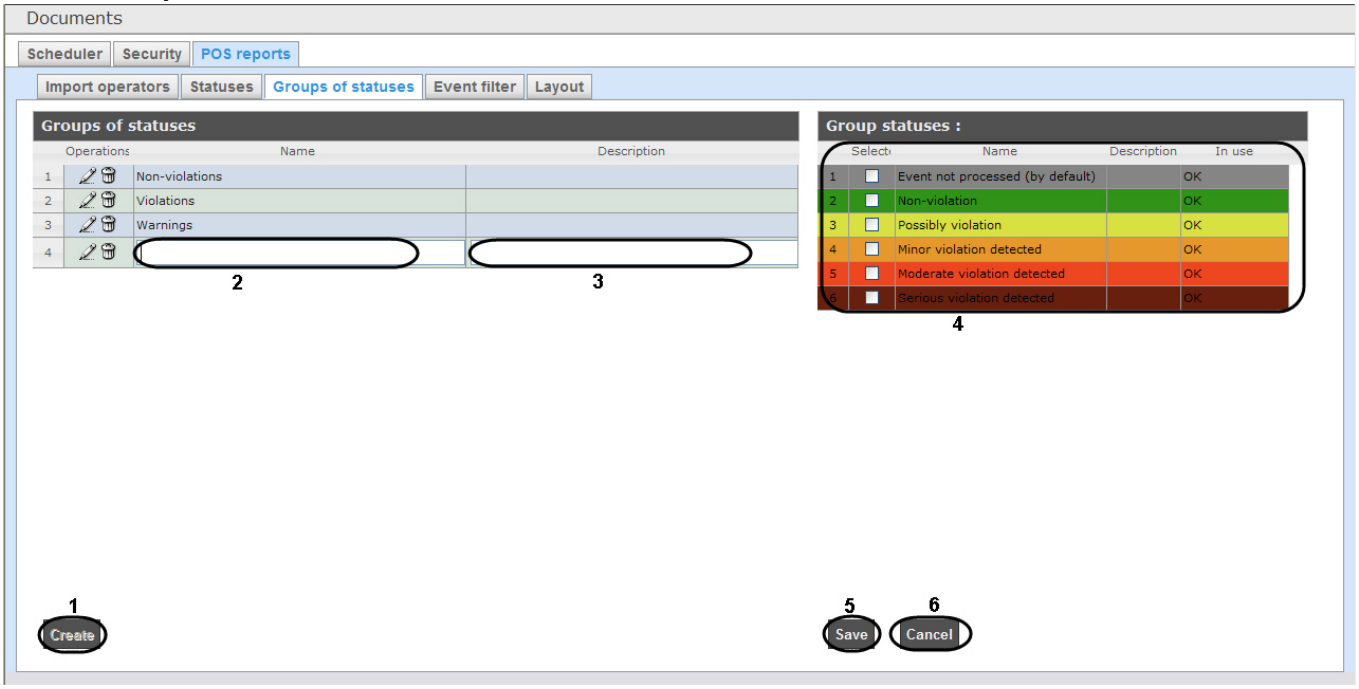
Group of statuses	**Statuses**
Non-violations	Non-violation
Violations	Minor violation detected
	Moderate violation detected
	Serious violation detected
Warnings	Event not processed
	Possibly violation

One can create other groups and also edit and delete the existing ones.

7.3.4.1 Creating a group of statuses

In order to create a group of statuses do the following:

1. Go to the **Groups of statuses** tab.



2. Click **Create** (**1**).
3. As a result a new line is added to the **Groups of statuses**table. Fill in its fields:
   3.1 In the **Name** field enter the name of a new group of statuses (**2**).
   3.2 In the **Description** field enter a short description of a group of statuses (**3**).

> **Note.**
> This field is optional for filling in.

4. In the **Selected** column of the **Group statuses** table (**4**) set checkboxes checked for those statuses that should be added to the group.

> **Note.**
> One should make sure that these statuses are in use (in the **In use** field there is **OK**). Otherwise the statuses will be ignored while making a report by group.

5. In order to save parameters of a new group of statuses click **Save** (**5**).

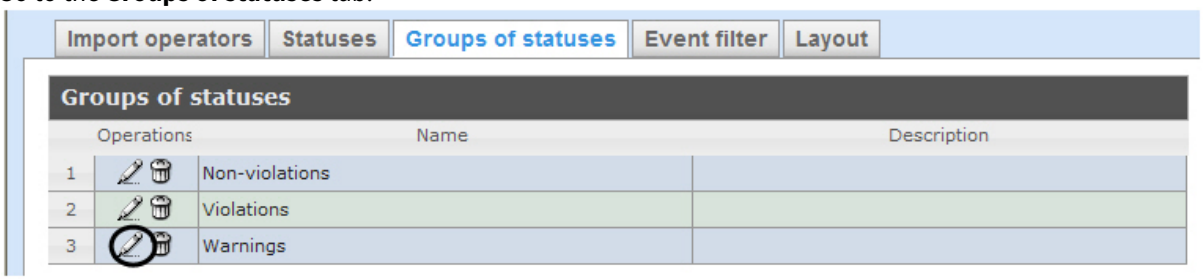
> **Note.**
> In order to cancel the creating a new group of statuses click **Cancel** (**6**).

Creating a new group of statuses is completed.

7.3.4.2 Editing a group of statuses

In order to edit a group of statuses do the following:

1. Go to the **Groups of statuses** tab.



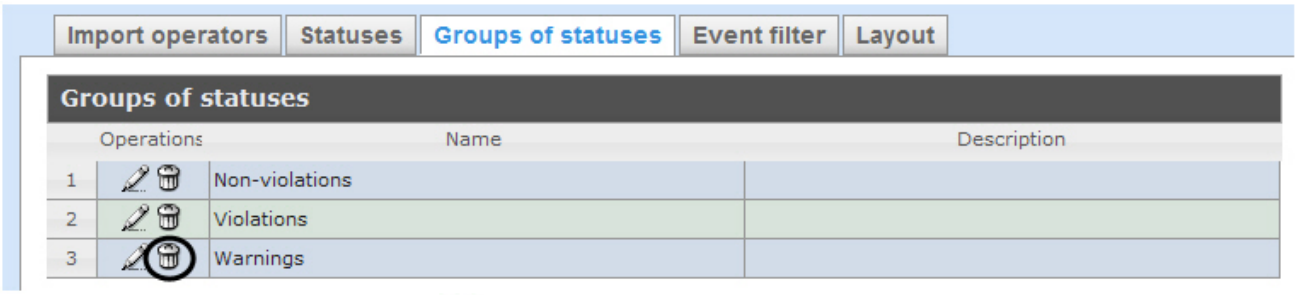
2. For the required group of statuses click in the **Operations** column.
3. As a result it will be possible to edit all parameters of a group of statuses. One can edit the group of statuses by analogy with its creation (see Creating a group of statuses section).

Editing a group of statuses is completed.

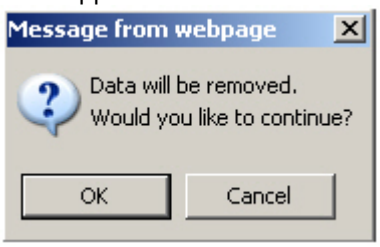
7.3.4.3 Deleting a group of statuses

In order to delete a group of statuses do the following:

1. Go to the **Groups of statuses** tab.



2. For the required group of statuses click in the **Operations** column.
3. In the appeared window confirm deleting a group of statuses by clicking **OK**.

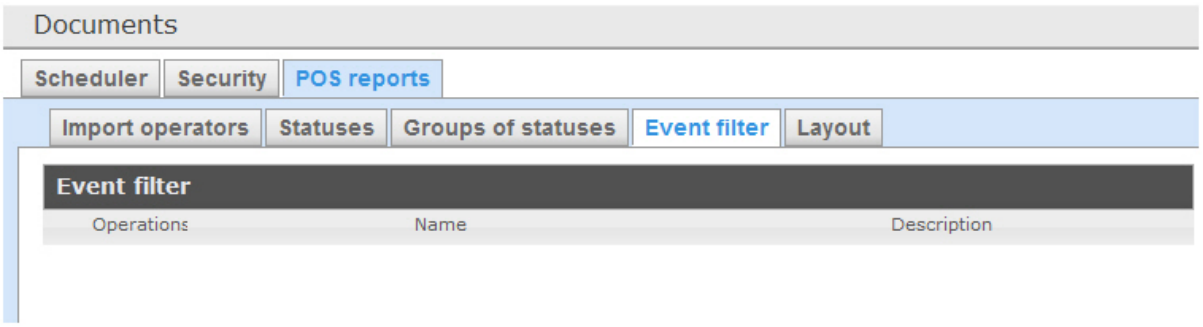


Deleting a group of statuses is completed.

7.3.5 Setting up the filter of events

One can create filters of function events and make general reports by these filters.

Setting up the event filters is carried out in the **Event filter** tab.



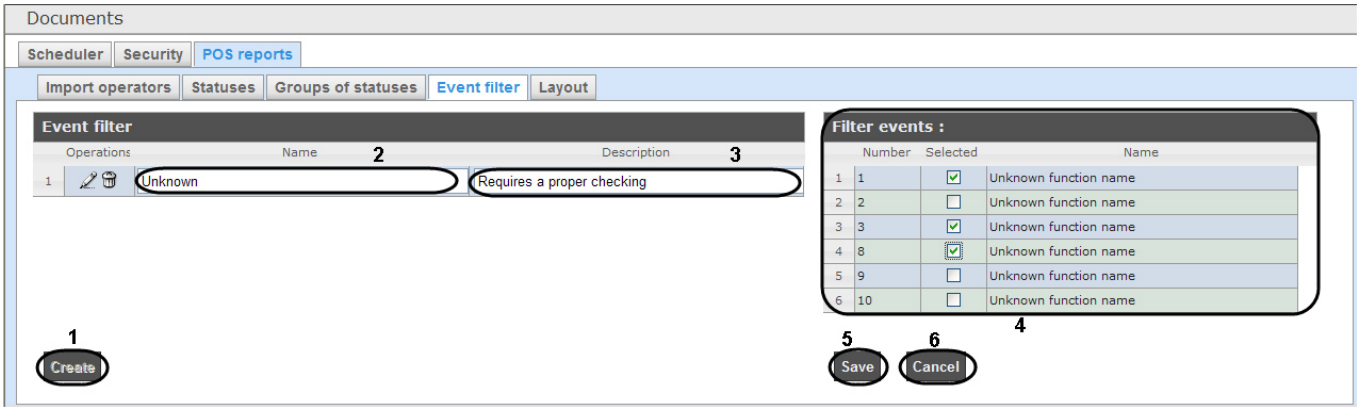
By default none filters are created in *Intellect Web Report System*.

One can create event filters and also edit and delete them.

7.3.5.1 Creating a filter of events

In order to create a filter of events do the following:

1. Go to the **Event filter** tab.



2. Click **Create** (**1**).
3. As a result a new line is added to the **Event filter**table. Fill in its fields:
   3.1 In the **Name** field enter the name of a new filter of events (**2**).
   3.2 In the **Description** field enter a short description of a filter of events (**3**).

> **Note.**
> This field is optional for filling in.

4. In the **Selected** column of the **Event filter** table (**4**) set checkboxes checked for those events that should be added to the filter.
5. In order to save parameters of a new filter of events click **Save** (**5**).

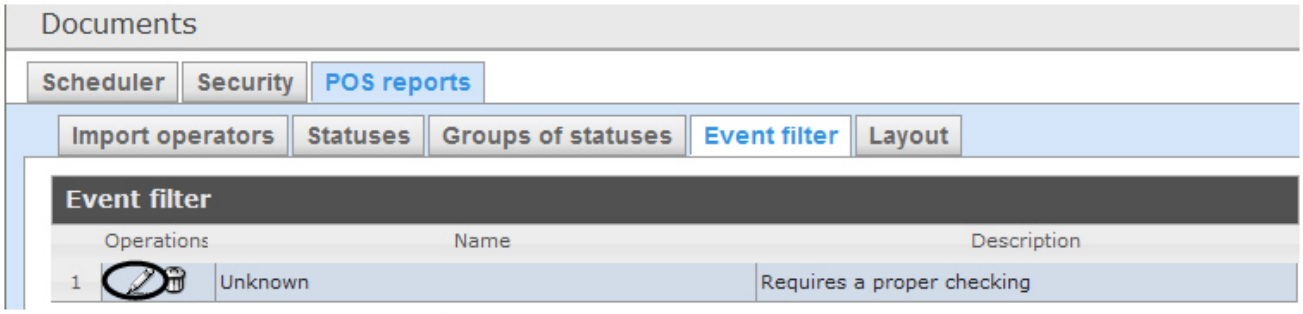
> **Note.**
> In order to cancel the creating a new filter of events click **Cancel** (**6**).

Creating a new filter of events is completed.

7.3.5.2 Editing a filter of events

In order to edit a filter of events do the following:

1. Go to the **Event filter** tab.



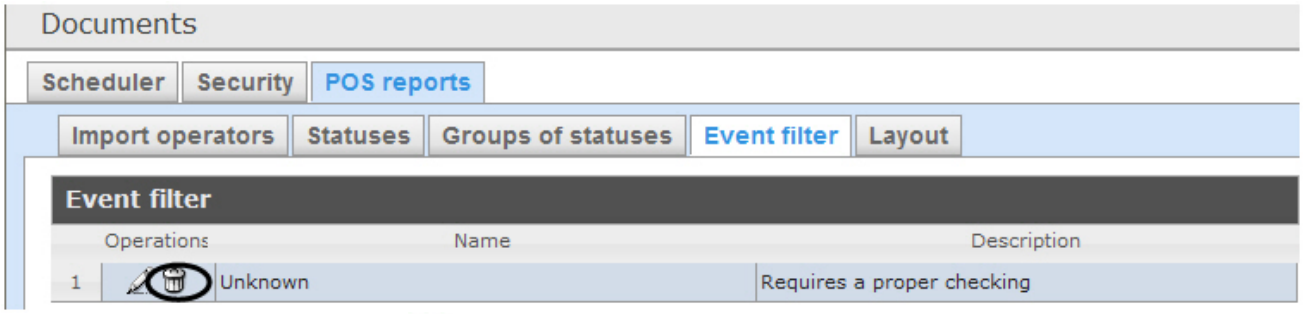
2. For the required filter of events click in the **Operations** column.
3. As a result it will be possible to edit all parameters of a filter of events. One can edit the filter of events by analogy with its creation (see Creating a filter of events section).

Editing a filter of events is completed.

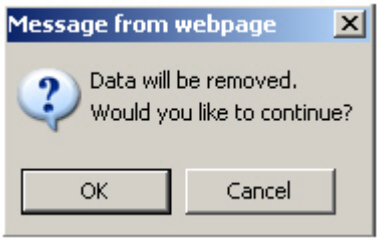
7.3.5.3 Deleting a filter of events

In order to delete a filter of events do the following:

1. Go to the **Event filter** tab.



2. For the required filter of events click in the **Operations** column.
3. In the appeared window confirm deleting a filter of events by clicking **OK**.

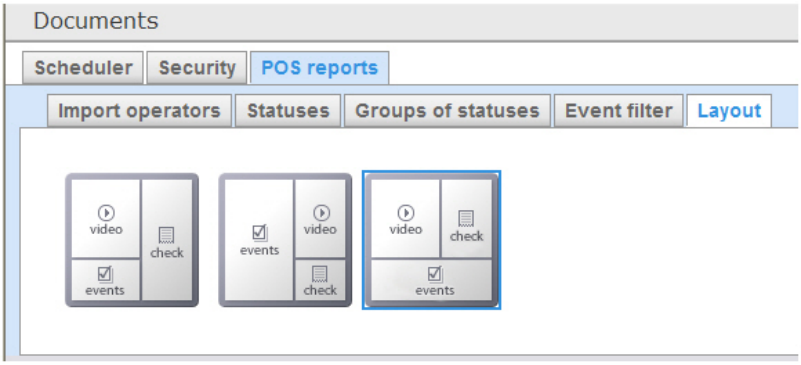


Deleting a filter of events is completed.

7.3.6 Selecting layouts in POS reports

One can select the layout of POS reports to make *Intellect Web Report System* more convenient to use.

Selecting the layouts POS events is carried out in the **Layout** tab.

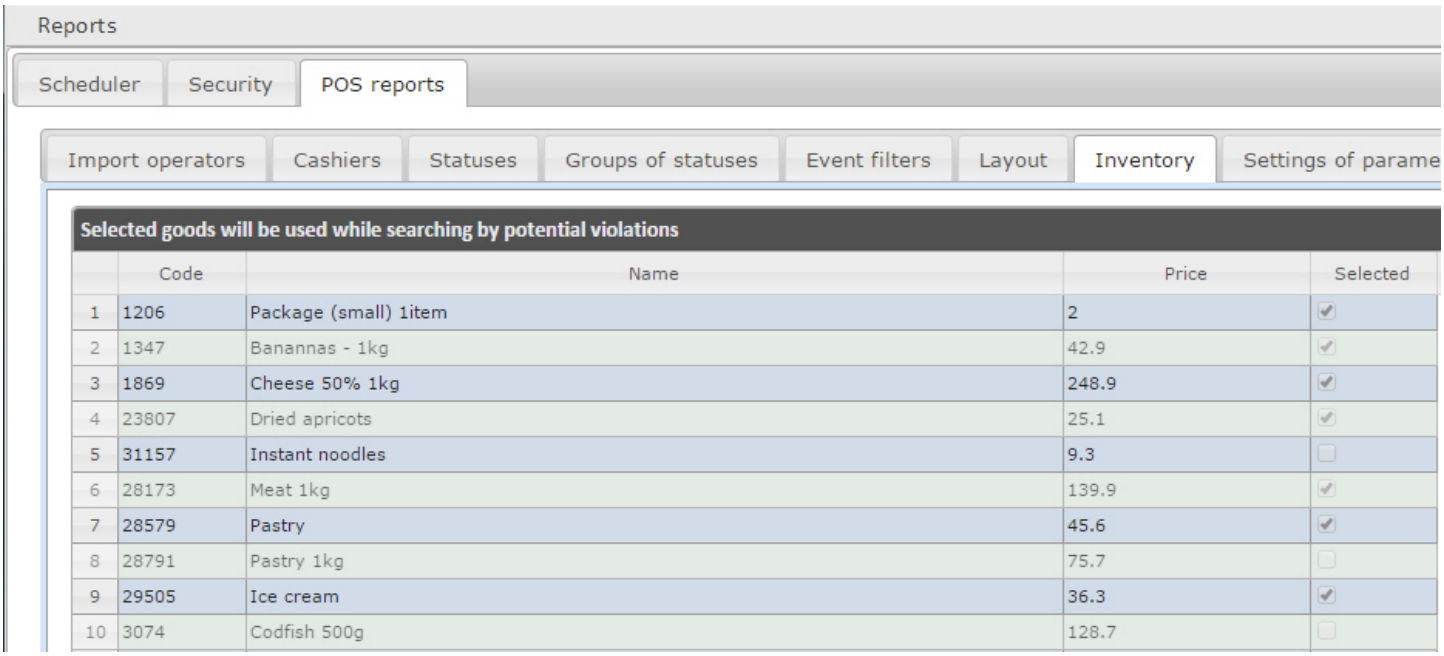


By default three layouts of POS reports are already created in *Intellect Web Report System*.

Select the needed layout by clicking the left mouse button.

7.3.7 Selecting items for report creating

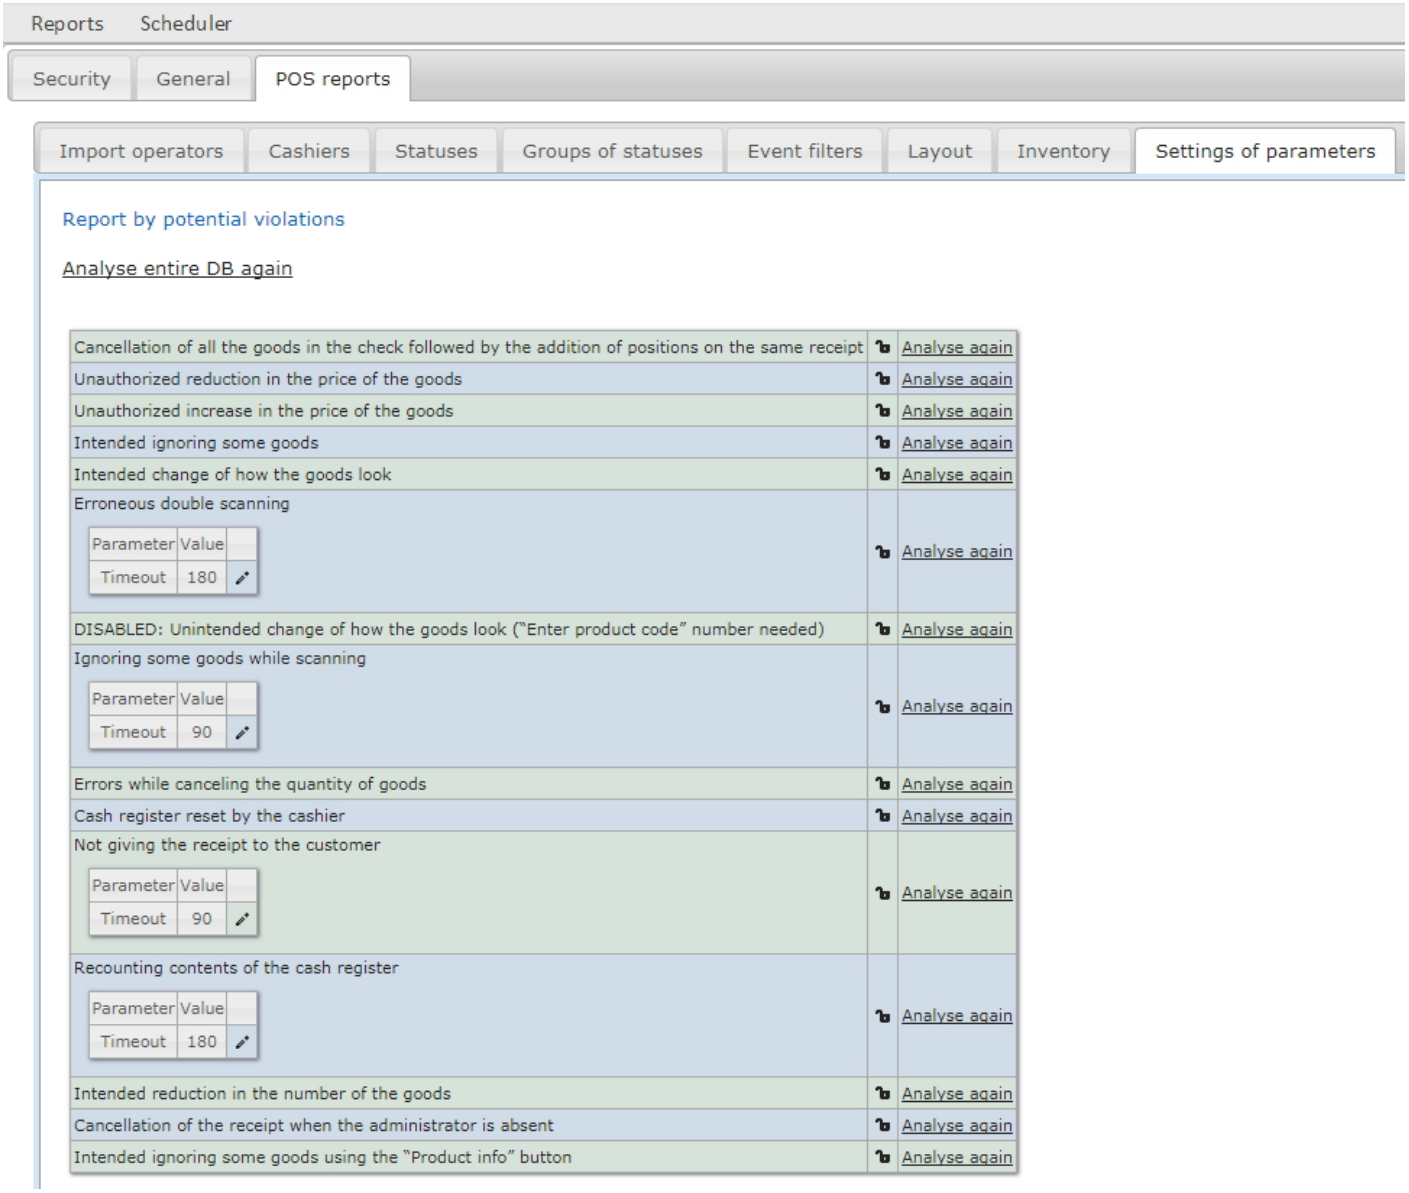
Selecting items by which the report by suspicious events is created is performed in the **Inventory** tab.



Set a checkbox close to the required name to select this item.

7.3.8 Setting up parameters of report by potential violations

Setting up parameters of report by potential violations is performed on the **Settings of parameters** tab.



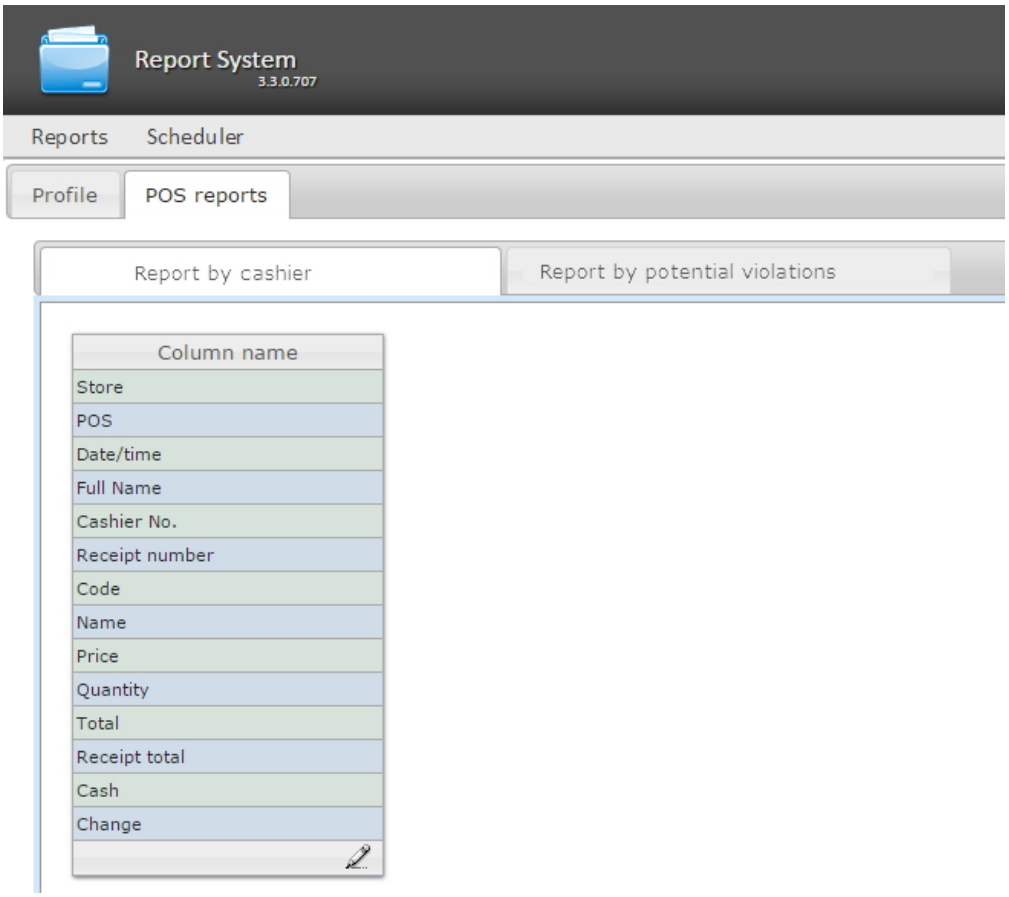
Click the sign close to the corresponding violation to disable it for selecting while creating the report by potential violations.

> **Note.**
> Report by **Unintended change of how the goods look** violation type is not available to create. To enable this violation type refer to the technical support department of the *AxxonSoft* company.

7.3.9 Setting up the user interface of POS reports

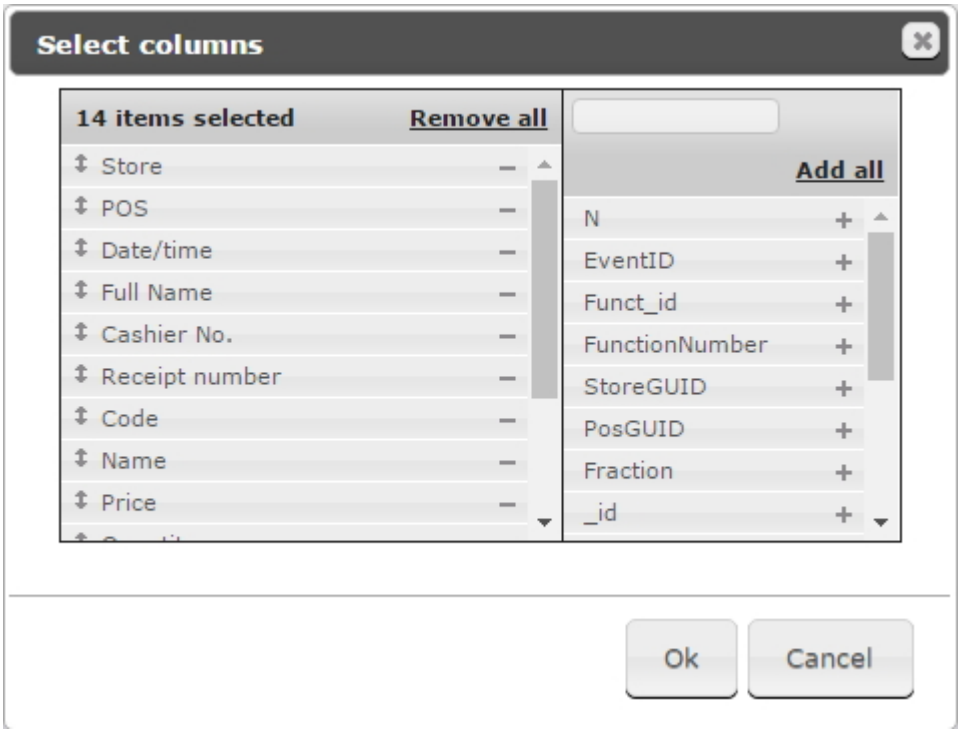
A unique interface of POS reports can be configured for every user.

User interface setup is performed on the **Profile** > **POS reports** tab.



To edit the list of columns in the report, do the following:

1. Click the icon at the bottom of the list.
2. In the window that appears, add the required columns by clicking + and remove the unnesserary ones by clicking −. It is possible to add/remove all the columns.
3. Click **OK** to save the changes.



The list of columns can be edited in a similar way by clicking the **Edit columns** button right on the report page.

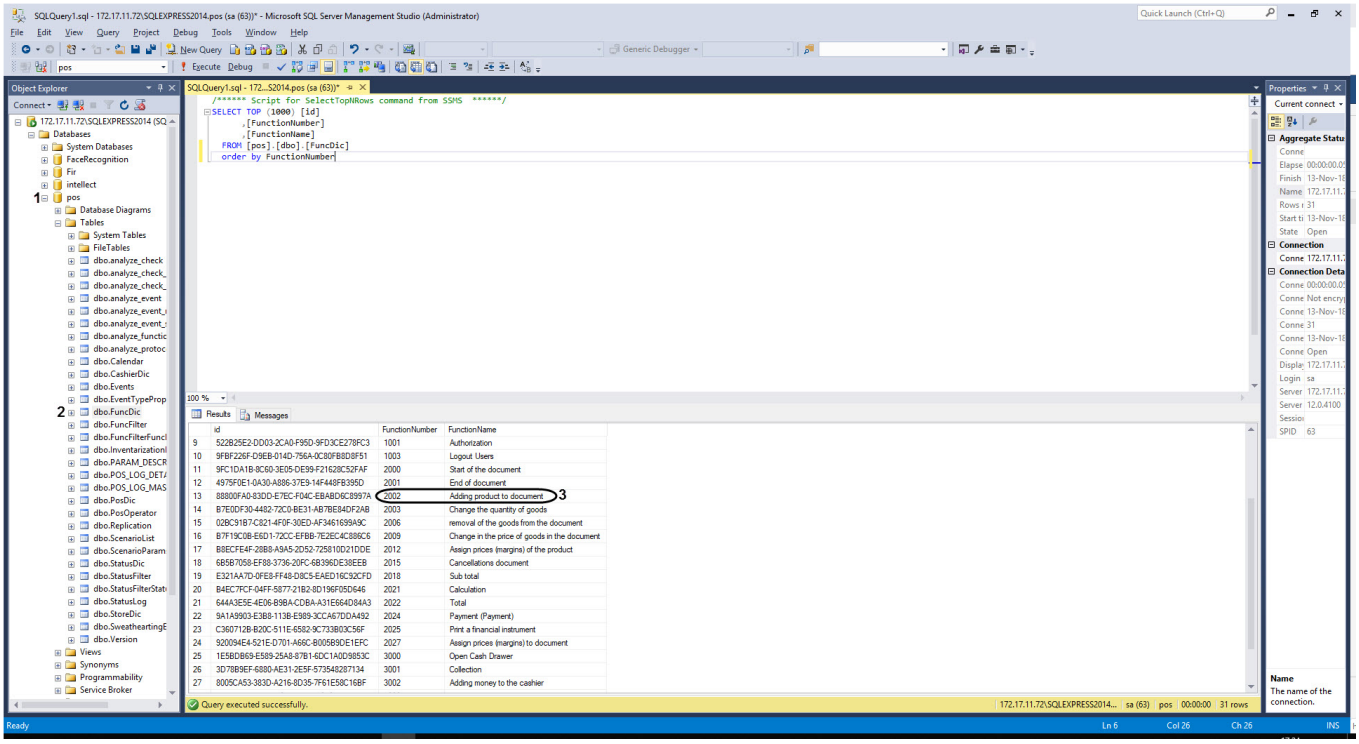
7.3.10 Setting up the Sweethearting report

7.3.10.1 Enabling the Sweethearting report

> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Sweethearting** report.
> After making any changes in the **Web.config** file, it is necessary to restart the **Cassini Service** utility.

By default, the **Sweethearting** report is disabled. To enable it, do the following:

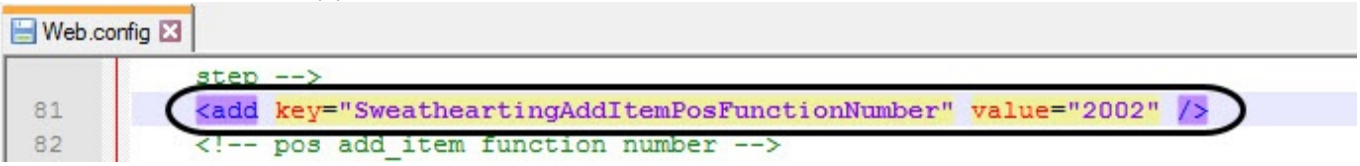
1. Open the **POS** database in the SQL Server Management Studio software (**1**).



2. Open the **dbo.FuncDic** table (**2**).
3. Copy to the clipboard or memorize the **Adding product to document** function number (**3**).

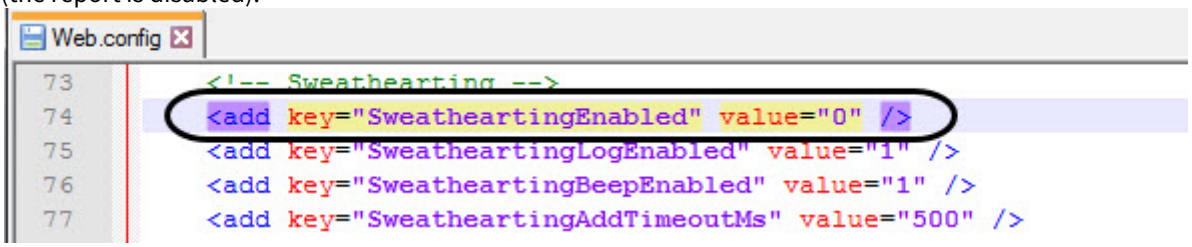
> **Note**
> The **Adding product to document** function name can differ depending on the localization.

4. Go to the <*Intellect* installation directory>\Modules\Wt2.
5. Open the **Web.config** file for editing.
6. For the **SweatheartingAddItemPosFunctionNumber** key specify the value corresponding to the **Adding product to document** function number (**3**).



> **Important!**
> If the **Adding product to document** function number is specified incorreclty, the **Sweethearting** report will not be enabled, because only the receipts with the item adding event number specified in the **SweatheartingAddItemPosFunctionNumber** key are added to the report.

7. To enable the **Sweethearting** report, specify the **1** value for the **SweatheartingEnabled** key. The default key value is **0** (the report is disabled).



8. Save the changes in the **Web.config** file.

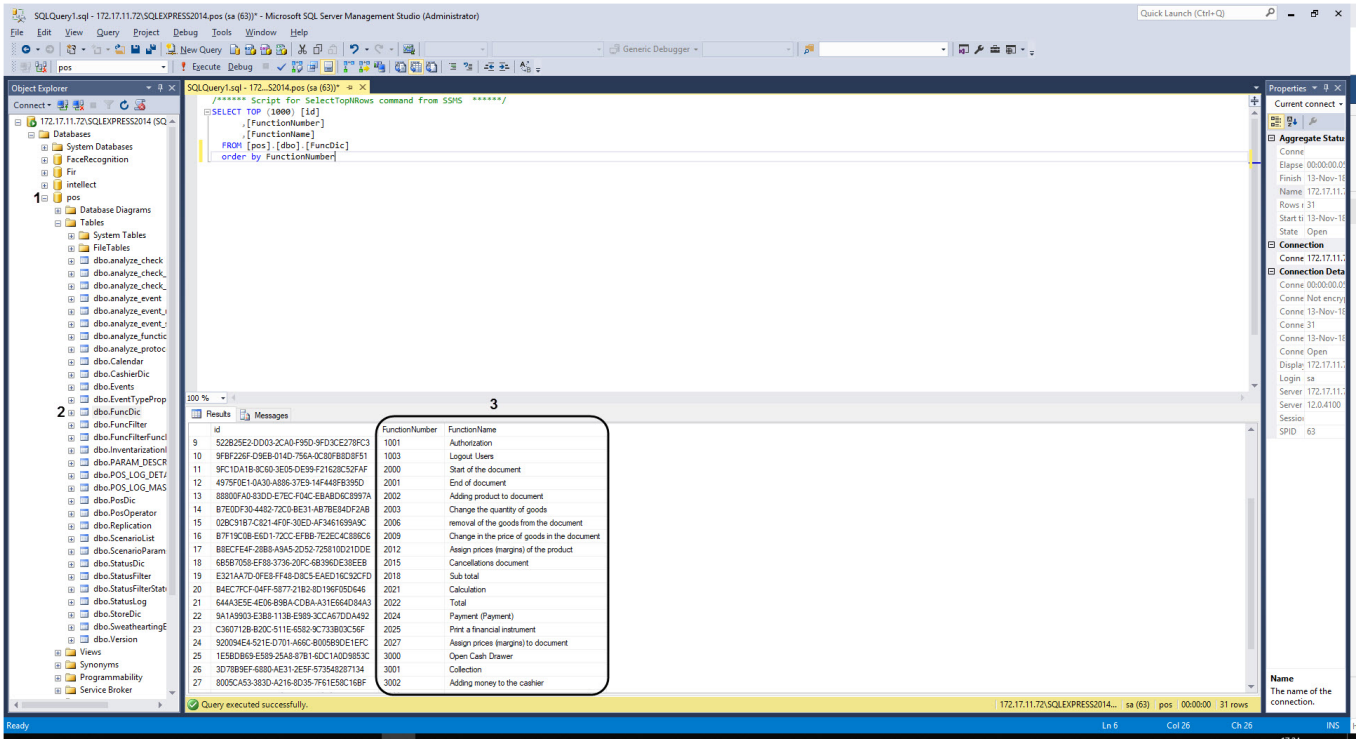
7.3.10.2 Filtering the sweethearting events

> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Sweethearting** report.
> After making any changes in the **Web.config** file, it is necessary to restart the **Cassini Service** utility.

You can filter the sweethearting events in order to build the **Sweethearting** report only by the events which occured while the receipt was open.

To filter the sweethearting events, do the following:

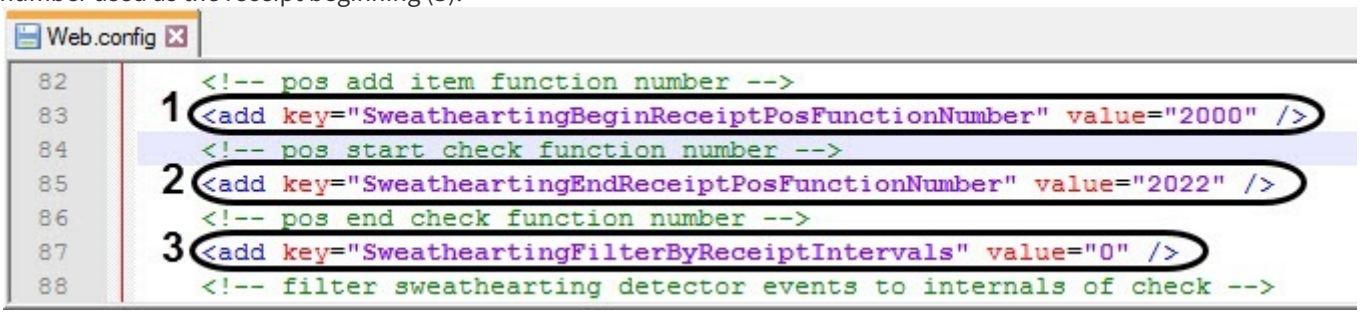
1. Open the **POS** database in the SQL Server Management Studio software (**1**).



2. Open the **dbo.FuncDic** table (**2**).
3. Copy to the clipboard or memorize the function numbers in the **FunctionNumber** column (**3**) which will indicate the beginning and the end of the receipt.

> **Note**
> For example, the **Document start** function with the corresponding function number **2000** can be used as the receipt beginning, and the **Result** function with the corresponding function number **2022** can be used as the receipt end.

4. Go to the <*Intellect* installation directory>\Modules\Wt2.
5. Open the **Web.config** file for editing.
6. For the **SweatheartingBeginReceiptPosFunctionNumber** key (**1**) specify the value corresponding to the function number used as the receipt beginning (**3**).



7. For the **SweatheartingEndReceiptPosFunctionNumber** key (**2**) specify the value corresponding to the function number used as the receipt end (**3**).
8. To enable filtering, specify the **1** value for the **SweatheartingFilterByReceiptIntervals** key (**3**). The default key value is **0** (filtering is disabled).
9. Save the changes in the **Web.config** file.

> **Note**
> As a result, only the events which occured while the receipt was open will be displayed in the **Sweethearting** report. If the sweethearting event occured when the receipt was closed, such event will not be displayed in the report.

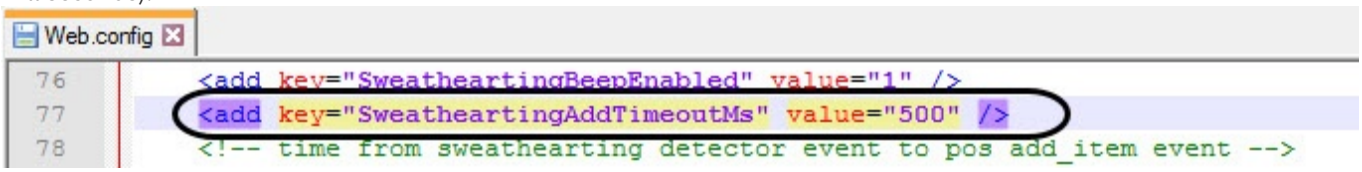
> **Note**
> The receipts which do not have their beginning and end specified in the **Web.config** file will be considered incorrect and will not be processed. Meanwhile, the receipt with several beginnings and ends specified will be processed.

7.3.10.3 Setting the timeout for sweethearting event addition to report

> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Sweethearting** report.
> After making any changes in the **Web.config** file, it is necessary to restart the **Cassini Service** utility.

You can set the timeout between the sweethearting detector event and the POS event. If this timeout is exceeded, the sweethearting event will be added to the report. To set the timeout, do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. For the **SweatheartingAddTimeoutMs** key specify the required value in milliseconds. The default value is **500** (500 milliseconds).



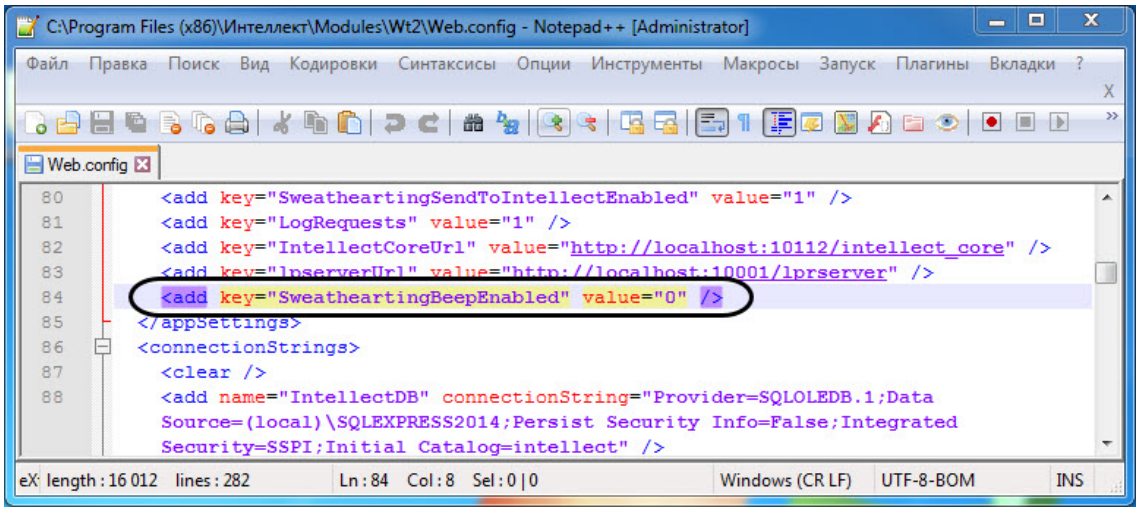
4. Save the changes in the **Web.config** file.

7.3.10.4 Disabling sound notification about new events in Sweethearting report

> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Sweethearting** report.
> After making any changes in the **Web.config** file, it is necessary to restart the **Cassini Service** utility.

To disable the sound notification about new events in **Sweethearting** report, do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. Set the **0** value for the **SweatheartingBeepEnabled** key. The default value is **1** (the sound notification is enabled).



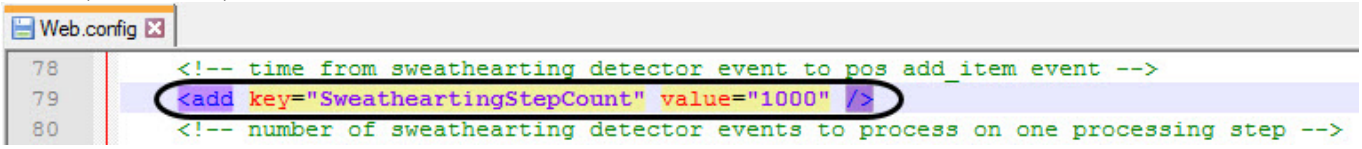
4. Save the changes in the **Web.config** file.

7.3.10.5 Configuring the events preloaded on first Sweethearting report launch

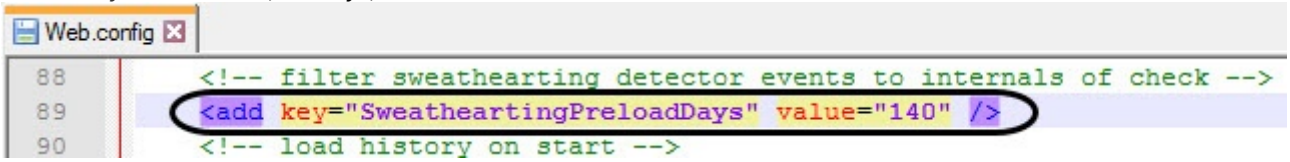
> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Sweethearting** report.
> After making any changes in the **Web.config** file, it is necessary to restart the **Cassini Service** utility.

To configure the events which should be preloaded on the first **Sweethearting** report launch, do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. For the **SweatheartingStepCount** key specify the required number of preloaded events. The default key value is **1000** (1000 events).



4. For the **SweatheartingPreloadDays** key specify the required number of days which events should be displayed. The default key value is **140** (140 days).



> **Note**
> For example, if the **1** (1 day) value is specified for the **SweatheartingPreloadDays** key, then on the first **Sweethearting** report launch all events occurred within the past 24 hours will be displayed. However, the number of preloaded events is limited by the value specified for the **SweatheartingStepCount** key. Therefore, if within the specified number of days the number of occurred events exceeds the **SweatheartingStepCount** key value, only the most recent events will be displayed in the report.

5. Save the changes in the **Web.config** file.

> **Note**
> This configuration applies to the events which are preloaded only on the first **Sweethearting** report launch. After you specify any filters in the report interface, they will be applied to the report.

7.4 Setting up the Time and Attendance reports

Setting up the Time and Attendance reports is performed in the **Time and Attendance reports** tab on the administration page.

Time and Attendance reports setup is performed in the following sequence:

1. Setting up the user access rights to departments
2. Setting up the access rights to Time and Attendance reports

> **Note**
> In order to perform the setup, you need to create the *Time and Attendance* interface object in the server, see Time and Attendance object settings.

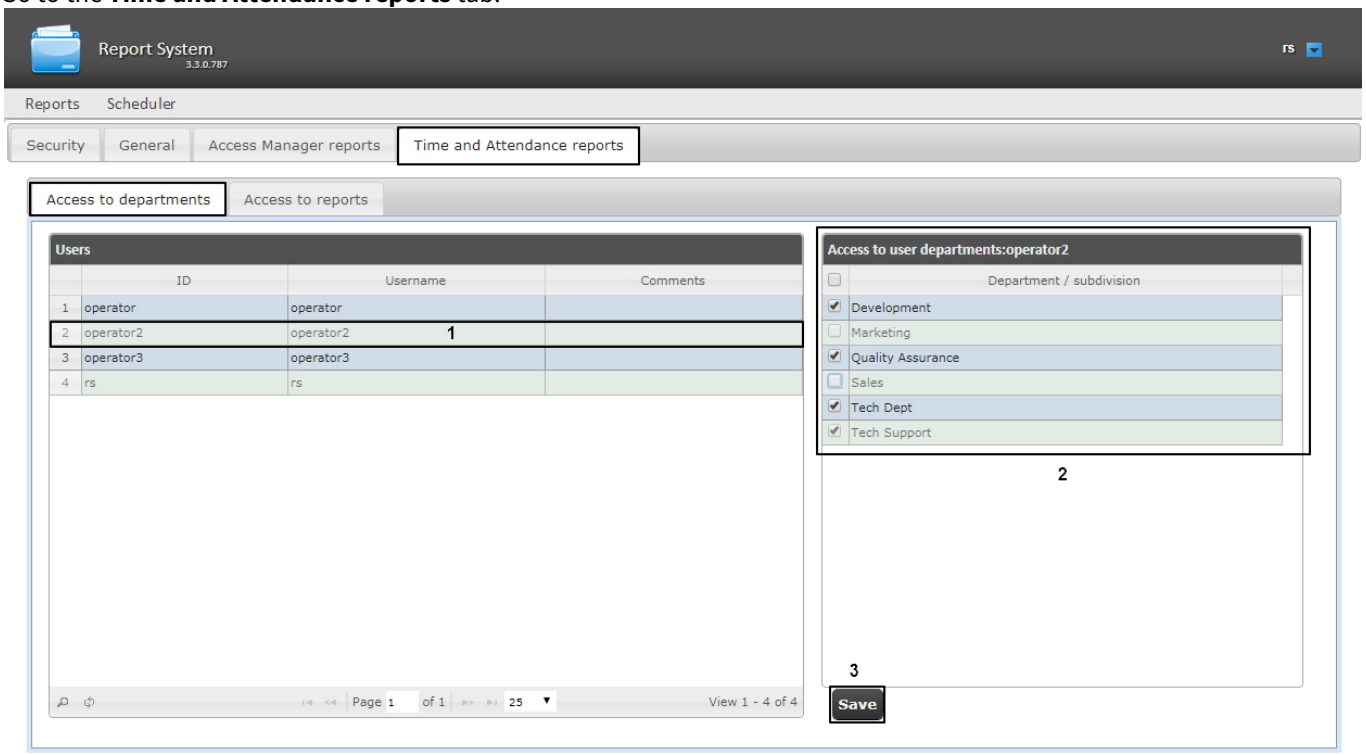
> **Note**
> In order to be able to work with Time and Attendance reports, the role with the right to perform the **Time and Attendance Module operator** operations should be created and assigned to users, as described in Set up the roles.

> **Note**
> Once the configuration is complete, update the report database as described in Updating the report database.

7.4.1 Setting up the user access rights to departments

To configure user access to departments do the following:

1. Go to the **Time and Attendance reports** tab.



2. In the **Users** table select the user for which access is to be configured (1).

> **Note**
> The user must have a role with the right to perform the **Time and Attendance module operator** operations. For details on role configuration, see Set up the roles.

3. The list of available departments for the selected user is displayed in the **Access to user department** table (2).

> **Note.**
> Only departments selected while configuring the *Time and Attendance* program module display in the **Access to user department** table

4. Set checkboxes close to departments to which access will be allowed for the selected user.
5. Click the **Save** button (3).
6. Repeat steps 2-5 for all users.

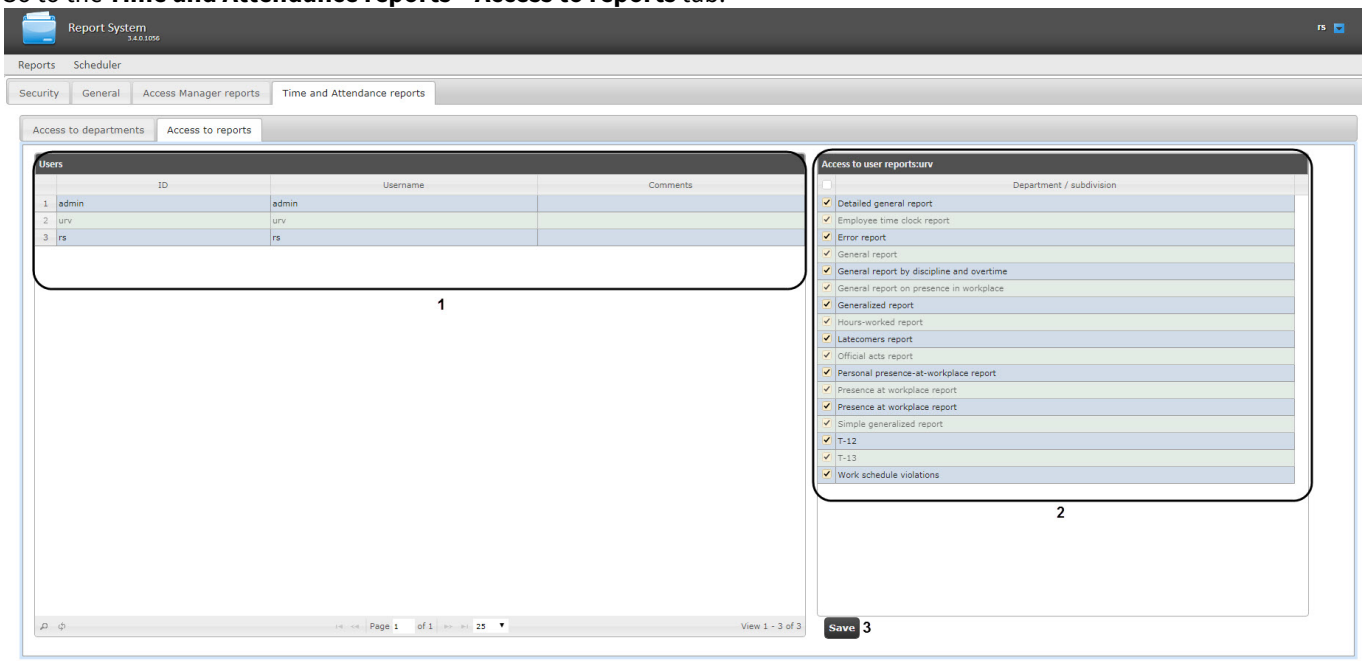
> **Note**
> The **rs** user has access to all departments by default, this can not be changed.

Configuring of user access to departments is completed.

7.4.2 Setting up the access rights to Time and Attendance reports

To configure user access to reports do the following:

1. Go to the **Time and Attendance reports** > **Access to reports** tab.



2. In the **Users** table select user for which access is configured (**1**).

> **Note**
> The user must have a role with the right to perform the **Time and Attendance module operator** operations. For details on role configuration, see Set up the roles.

3. The list of available reports for the selected user is displayed in the **Access to user reports** table (**2**).
4. Set the checkboxes next to reports which will be enabled for the selected user.
5. Click the **Save** button (**3**).
6. Repeat steps 2-5 for all users.

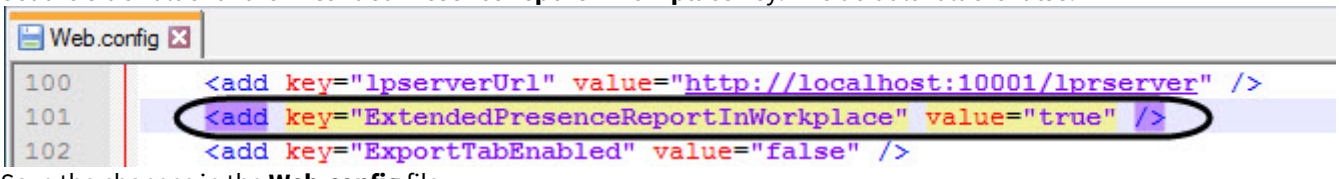
Configuring user access to reports is complete.

7.4.3 Enabling the extended display of reports

> **Attention!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Presence at workplace** report and **General report on presence in workplace**.

To enable the extended display of the **Presence at workplace report** and the **General report on presence in workplace**, do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. Set the **true** value for the **ExtendedPresenceReportInWorkplace** key. The default value is **false**.



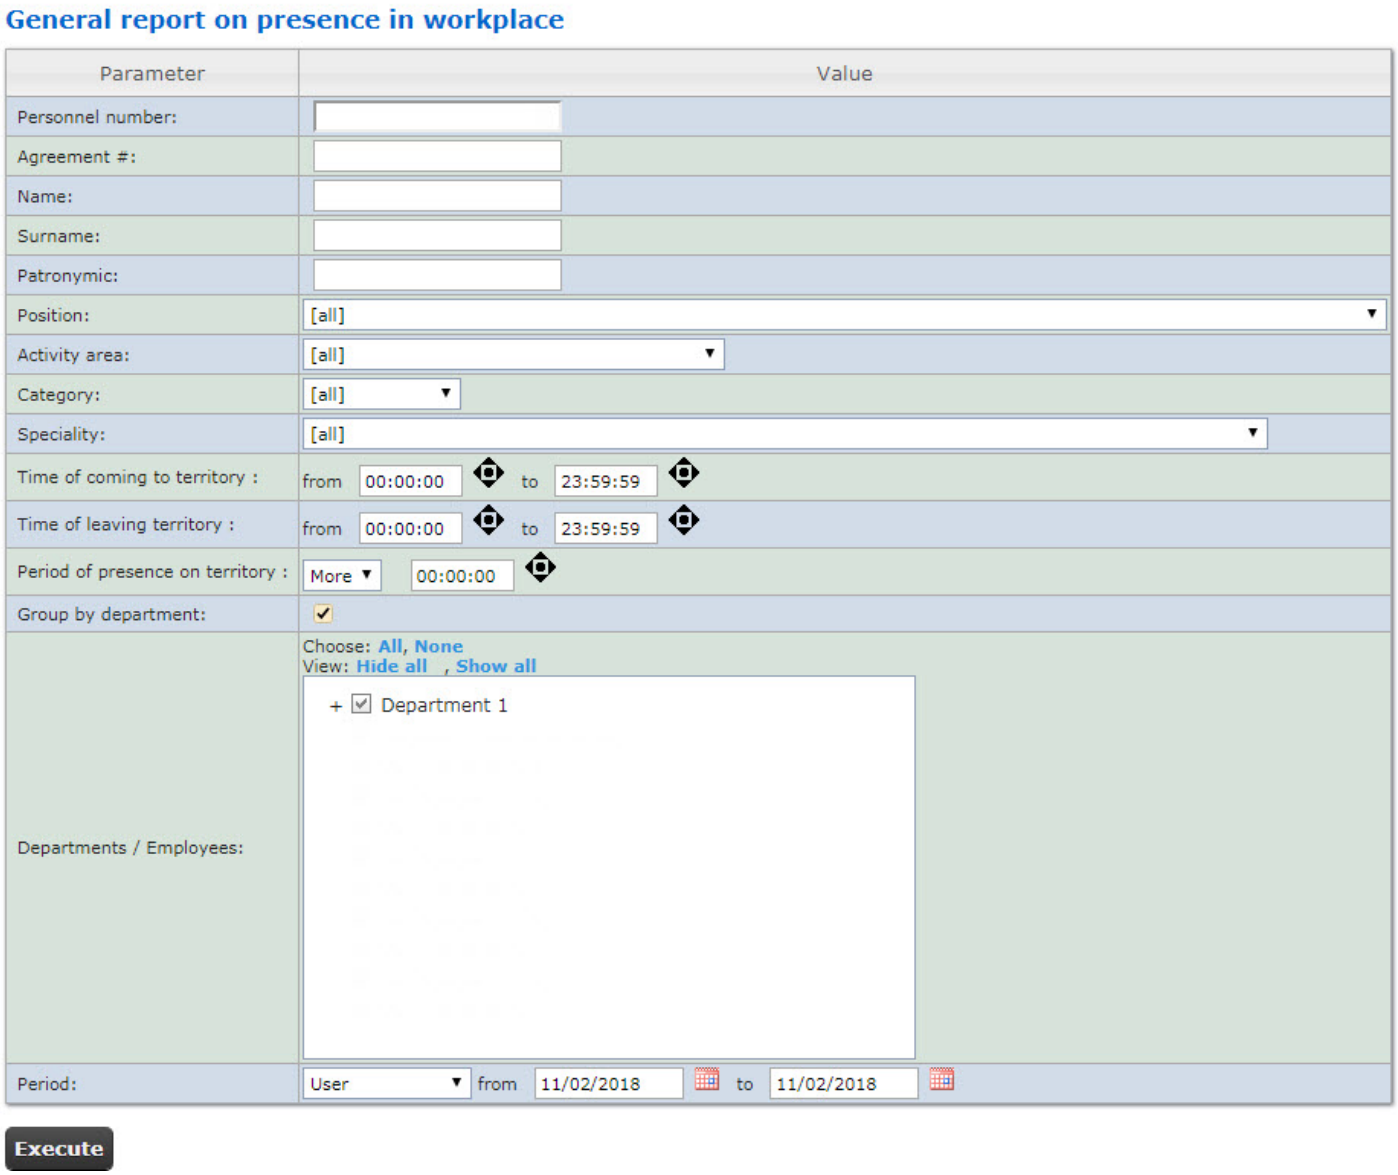
4. Save the changes in the **Web.config** file.

As a result, when generating the **Presence at workplace** report and the **General report on presence in workplace**, they will look like this:

Presence at workplace report

Parameter	Value
Area:	Street 1.1
Personnel number:	
Agreement #:	
Name:	
Surname:	
Patronymic:	
Position:	[all]
Activity area:	[all]
Category:	[all]
Speciality:	[all]
Time of coming to territory :	from 00:00:00 to 23:59:59
Time of leaving territory :	from 00:00:00 to 23:59:59
Period of presence on territory :	Less 00:00:00
Group by department:	☑
Sum up each employee's time :	☑
Departments / Employees:	Choose: All, None View: Hide all , Show all + ☑ Department 1
Period:	User from 11/02/2018 to 11/02/2018

Execute



7.5 Setting up the Access Manager reports

> **Attention!**
> Prior to setting up the Access Manager reports, it is necessary to update the report database as described in Updating the report database.

Setting up the Access Manager reports is performed in the **Access Manager reports** tab on the administration page.

Access Manager reports setup is performed in the following sequence:

1. Setting up user access to departments
2. Setting up user access to reports

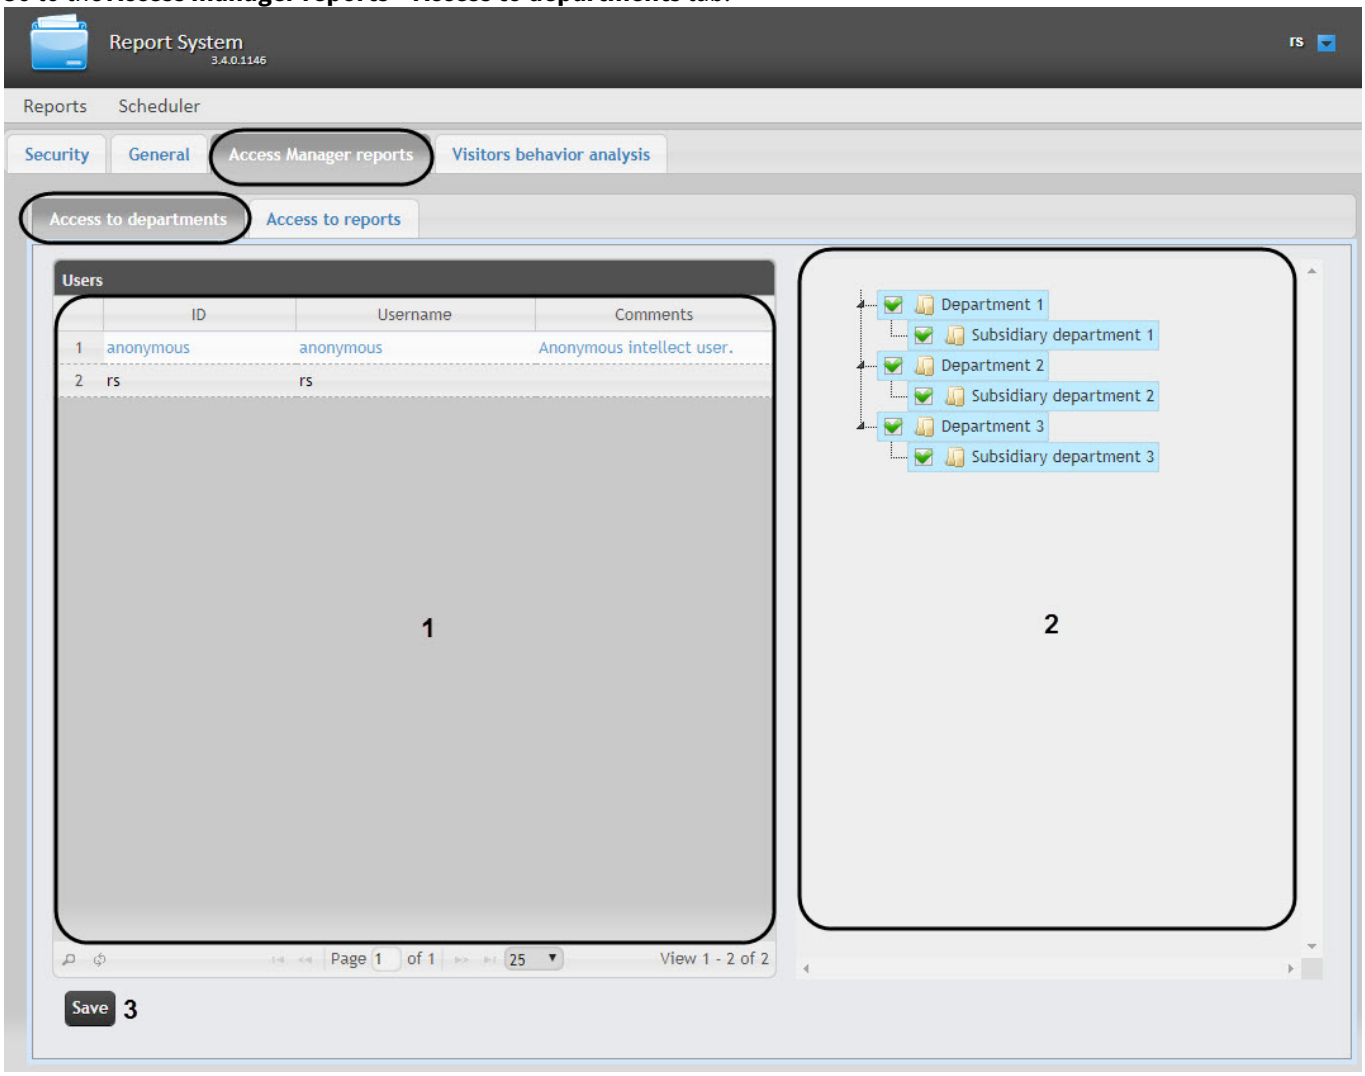
> **Note**
> To perform the configuration, the *Access Manager* interface object must be created and configured on the Server, see Configuration of the Access Manager module.

> **Note**
> In order to be able to work with Access Manager reports, the role with the right to perform the **Access Manager operator** operations should be created and assigned to users, as described in Set up the roles.

7.5.1 Setting up user access to departments

To configure user access to departments do the following:

1. Go to the **Access manager reports > Access to departments** tab.



2. In the **Users** table select user for which access is to be configured (**1**).

> **Note**
> The user must have a role with the right to perform the **Access Manager operator** operations. For details on role configuration, see Set up the roles.

3. The list of available departments for the selected user is displayed in the **Access to user departments** table (**2**).
4. Set the checkboxes close to departments to which access will be allowed for the selected user.
5. Click the **Save** button (**3**).
6. Repeat steps 2-5 for all users.

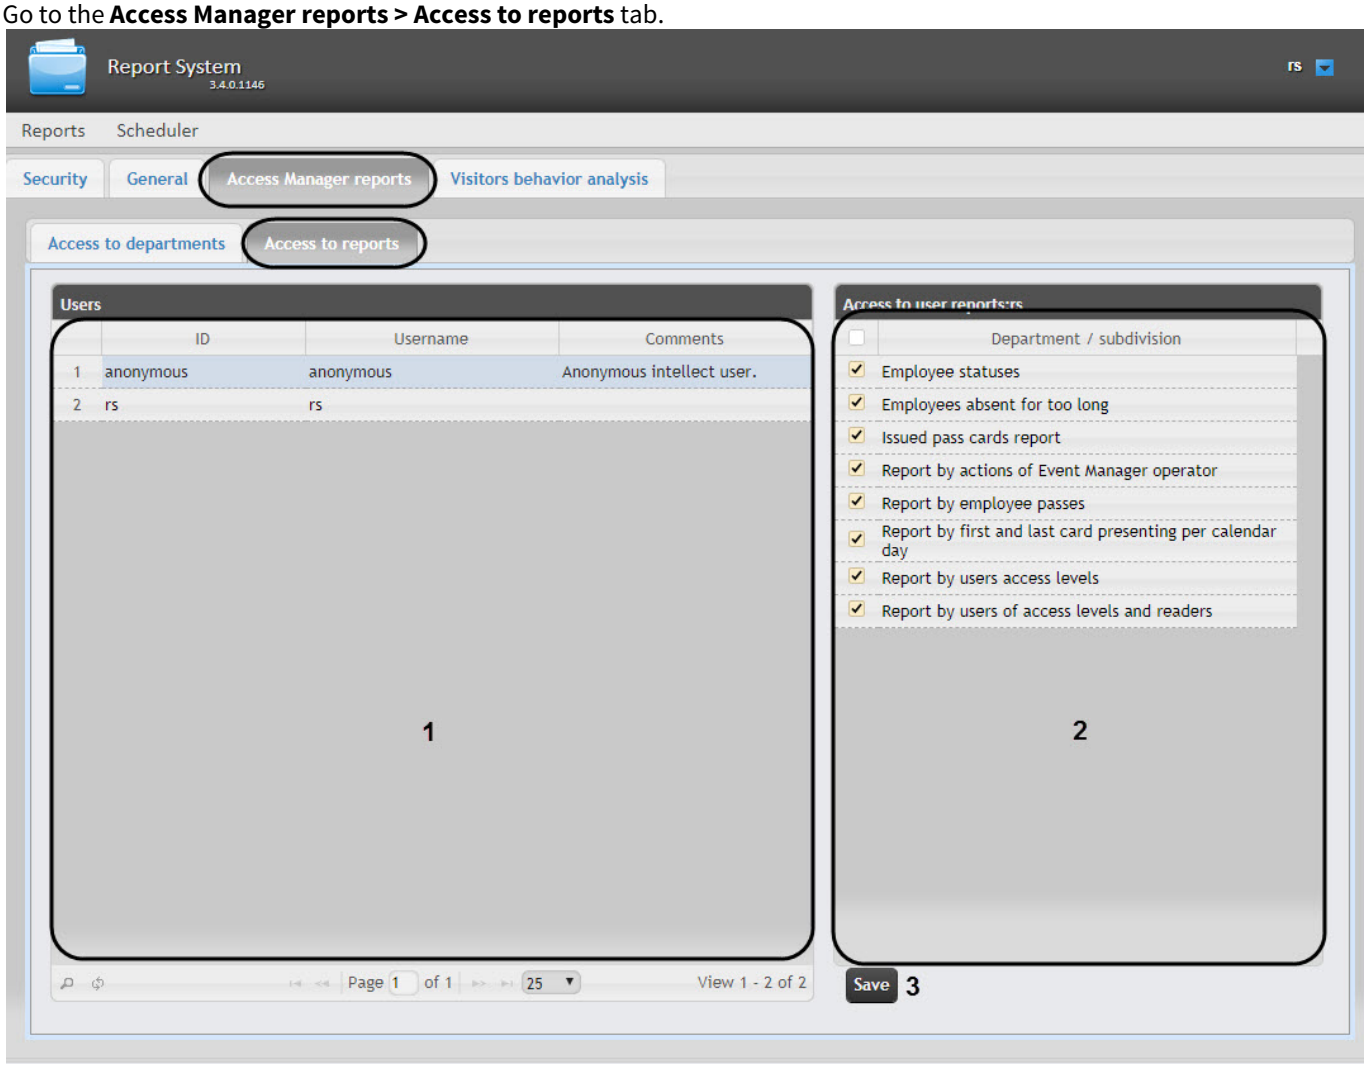
> **Note**
> The **rs** user has access to all departments by default.

Configuring user access to departments is completed.

7.5.2 Setting up user access to reports

To configure user access to reports do the following:

1. Go to the **Access Manager reports > Access to reports** tab.



2. In the **Users** table select user for which the access is configured (**1**).

> **Note**
> The user must have a role with the right to perform the **Access Manager operator** operations. For details on role configuration, see Set up the roles.

3. The list of available reports for the selected user is displayed in the **Access to reports of user** table (**2**).
4. Set the checkboxes next to reports which will be enabled for the selected user.
5. Click the **Save** button (**3**).
6. Repeat steps 2-5 for all users.

Setting up user access to Access Manager reports is complete.

7.6 Setting up the Auto reports

7.6.1 Setting up the Recognized license plates report

If the recognized LP images and the vehicle frames are stored in a folder on a disk (see Configuring the recognized LP images and vehicle images storage on disk), then for the correct operation of the **Recognized license plates** report (see Recognized license plates report), it is necessary to do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.

2. Open the **Web.config** file for editing.
3. For the **lpServerUrl** key specify the server address where the recognized LP images and the vehicle frames are stored. The default key value is **http://localhost:10001/lprserver**.

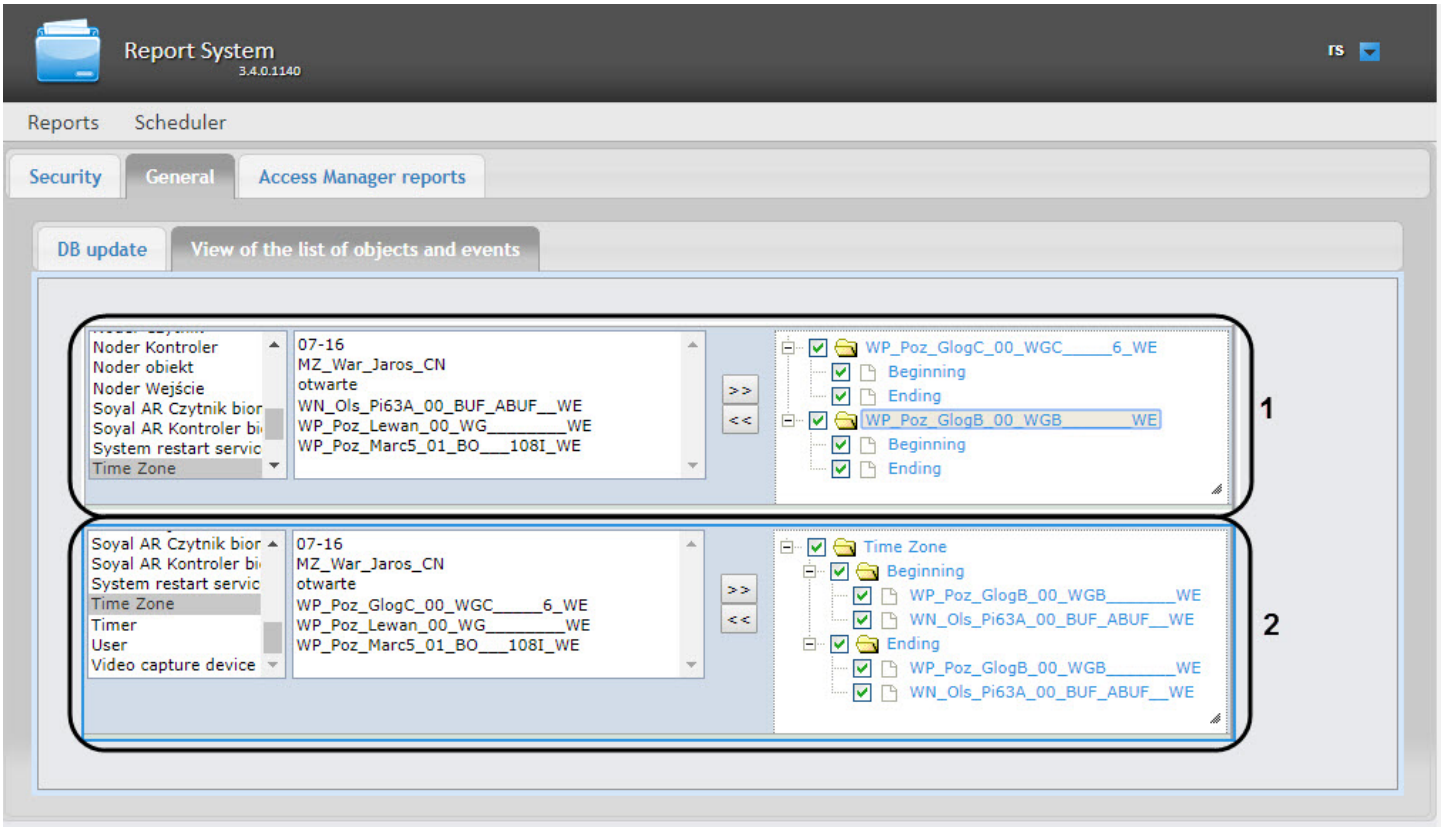
4. Save the changes in the **Web.config** file.

> **Important!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the **Recognized license plates** report.

7.7 Setting up the general reports

7.7.1 Selecting the view of the list of objects and events for the Protocol report

It is possible to select the view of the list of objects and events for the Protocol report. This can be set up on the **View of the list of objects and events** tab of the administration page.



To select the view of the list of objects and events, left-click on the required view: (**1**) or (**2**).

> **Note**
> The selected view is highlighted with a blue frame.

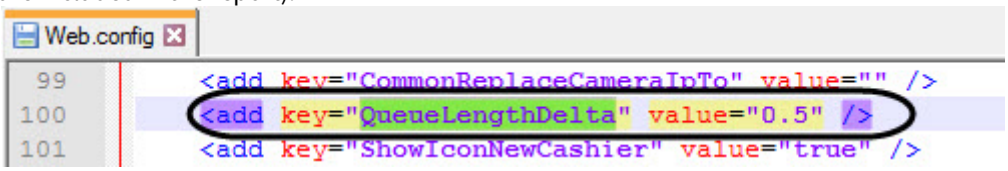
7.8 Setting up the reports by Queue Length detectors

7.8.1 Disabling the zero value filter

> **Attention!**
> The **Web.config** file configuration must be performed on the computer where it is planned to work with the reports by Queue Length detectors.

To include the 0 values to the table reports by Queue Length detectors, do the following:

1. Go to the <*Intellect* installation directory>\Modules\Wt2.
2. Open the **Web.config** file for editing.
3. Set the **0** value for the **QueueLengthDelta** key. The default value is **0.5** (which means that only the values greater than 0.5 are included in the report).



4. Save the changes in the **Web.config** file.

7.9 Setting up the Customer behavior reports

7.9.1 Cleaning up the database for the Customer behavior reports

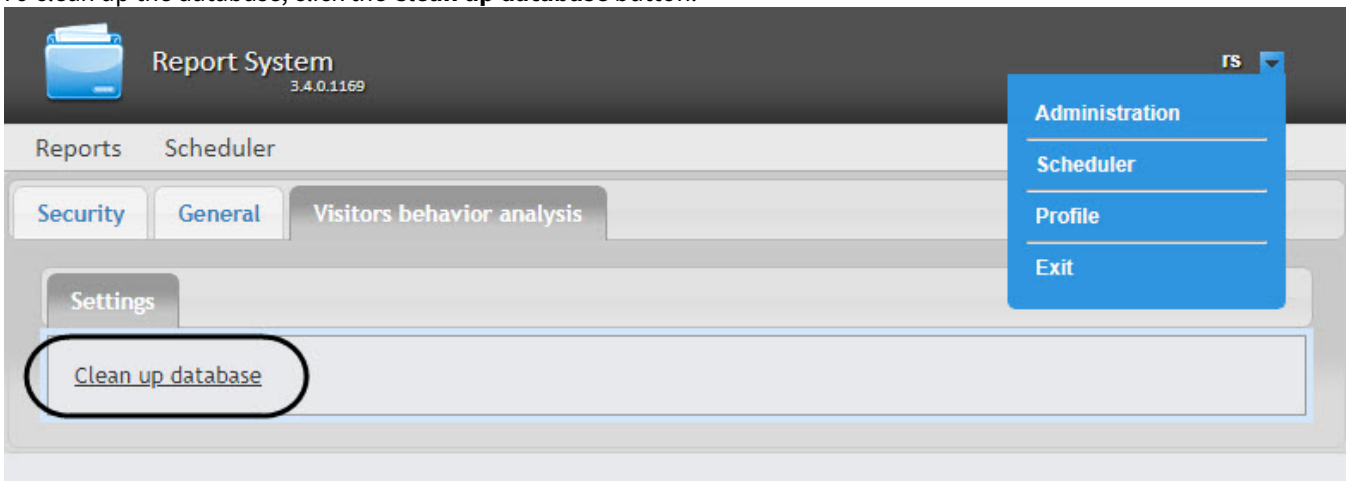
Cleaning up the database for the Customer behavior reports allows you to avoid the situation when the surveillance areas of the **Heat map detection** object (see Configuring the «Heat map detection» module) remain in the database after their deletion from *Intellect* and are displayed in the Customer behavior reports (see Working with Customer behavior reports).

> **Important!**
> The database is cleaned up on the server which is specified in the *Intellect Web Report System* connection string in the file C:\Program Files(x86)\Intellect\Modules\Wt2\Web.config (see Intellect Web Report System installation).

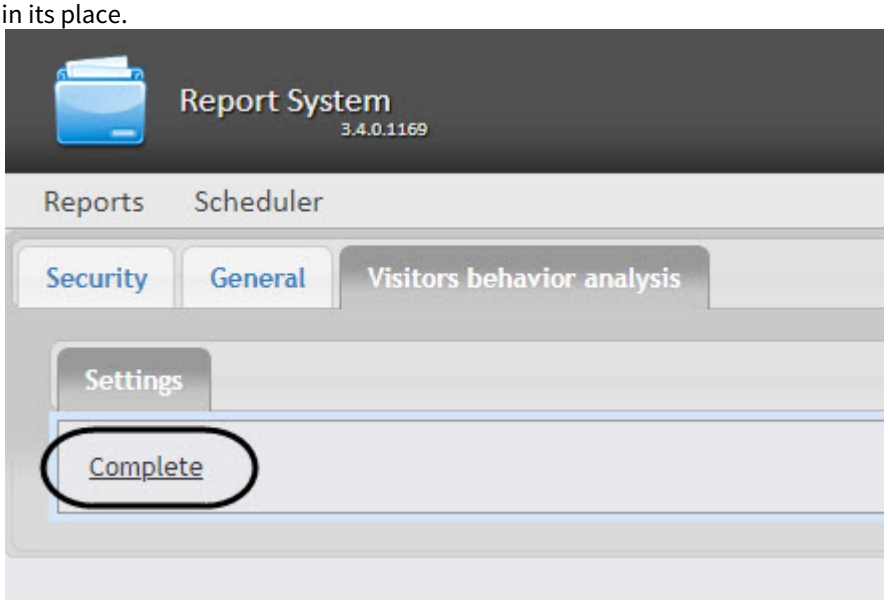
> **Note**
> Only the data related to the **Heat map detection** object is deleted from the database.

To clean up the database for the Customer behavior reports, do the following:

1. Go to the **Administration**, then open the **Visitors behavior analysis** tab, then open the **Settings** tab.
2. To clean up the database, click the **Clean up database** button.



3. After you click the **Clean up database** button, the database should be cleaned up, and the **Complete** sign should appear in its place.

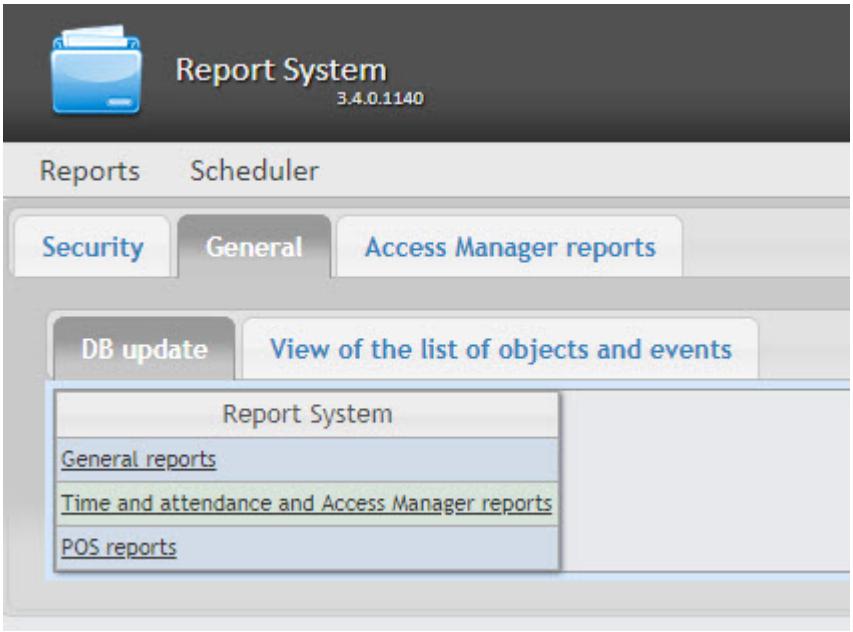


4. After the database clean up, the computer with the database server should be restarted.

Cleaning up the database for the Customer behavior reports is completed.

7.10 Updating the report database

Stored procedures for **General**, **Time and Attendance** and **POS** reports are updated in the database on the **General** tab of the administration page.



In order to update the stored procedures in the database for a specific type of reports, click the corresponding link in the **DB update** table.

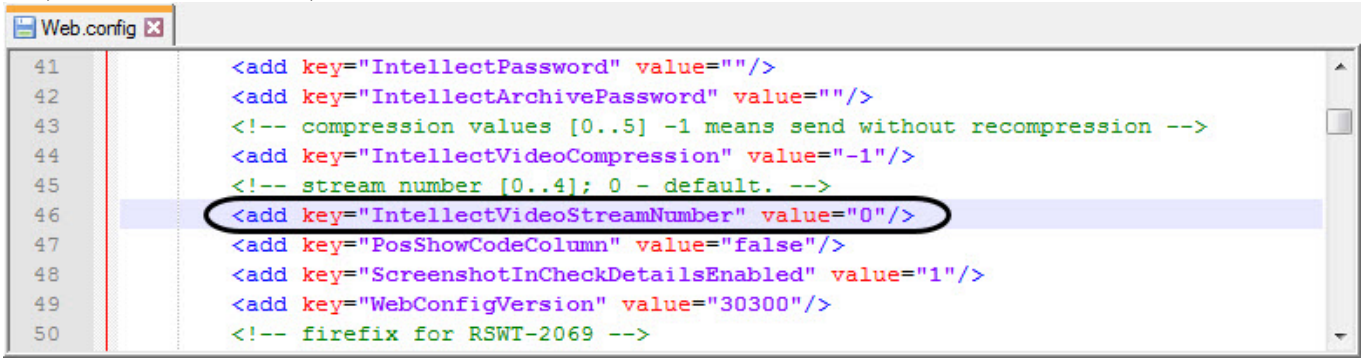
The stored procedures for Time and Attendance reports and Access Manager reports are stored in a single database. If any of thw two modules is absent, it will not hamper the update procedure: the stored procedure for the absent module will not be loaded in the database.

> **Warning!**
> The **General reports** database must be updated after each new installation of the Web Report System or re-installation with configuration update.

7.11 Selecting the camera stream in live video reports

To select the camera stream in live video reports, do the following:

1. Go to *<Intellect installation directory>*\Modules\Wt2.
2. Open the **Web.config** configuration file for editing.
3. For the **IntellectVideoStreamNumber** key specify the required camera stream number from **1** to **4**. By default, the value is **0** (the first camera stream).



4. Save the changes in the **Web.config** file.

> **Important!**
> This configuration must be performed on the computer where it is planned to work with reports and where the live video is available for viewing.

8 Working with Intellect Web Report System

Working with *Intellect Web Report System* is performed on the document page (see Intellect Web Report System interface section).

Opportunities of the *Intellect Web Report System* are described in the Purpose of the Intellect Web Report System section.

> **Note.**
> For proper operation of the Web Report System you may need to edit the configuration file (**Web.config**) by increasing the value of the **CommandTimeout** parameter (see the XML-file parameters reference guide)

8.1 Working with POS reports

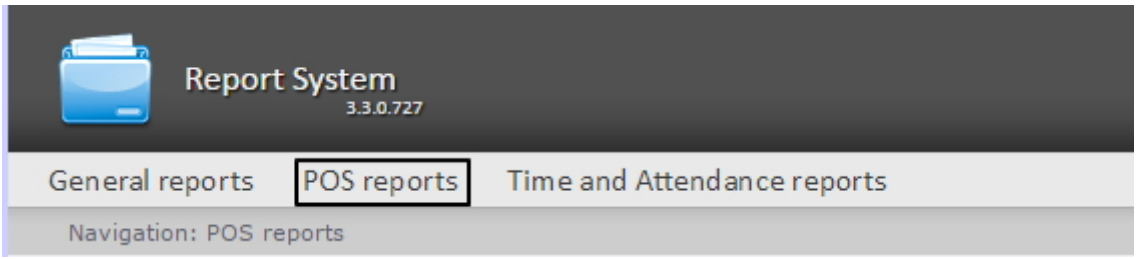
POS reports are created by the local database of the *Intellect* software package, but it is also possible to use data from remote servers. Configuration of database replication is needed (see Configuring the POS Replicator system object).

Working with POS reports starts with selection of summary report type.

8.1.1 General reports

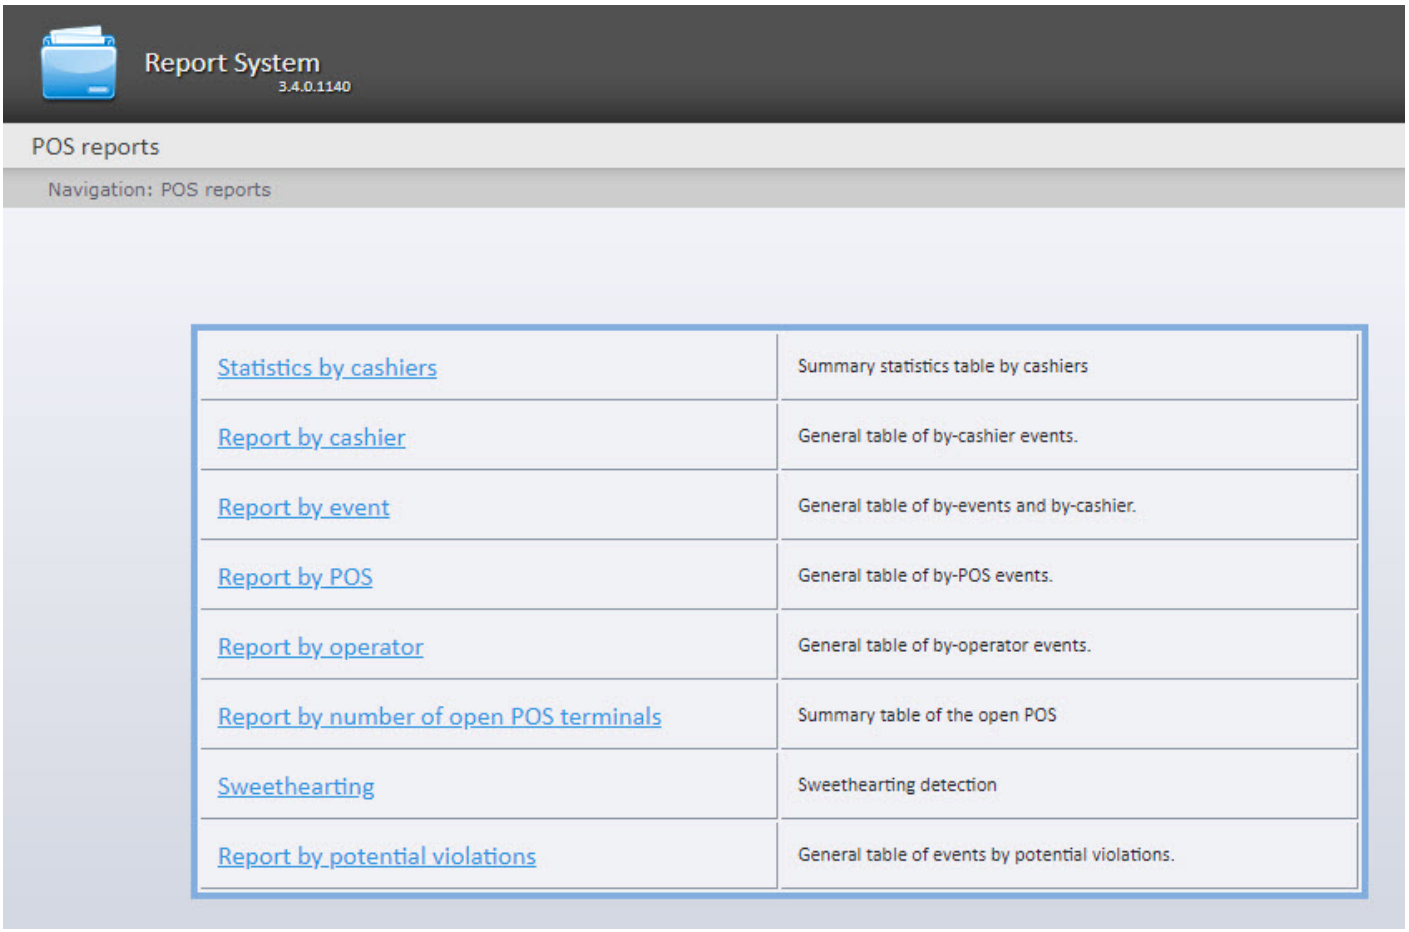
8.1.1.1 Selecting a type of general POS report

In order to select type of general POS report click **POS reports** in the menu of reports.



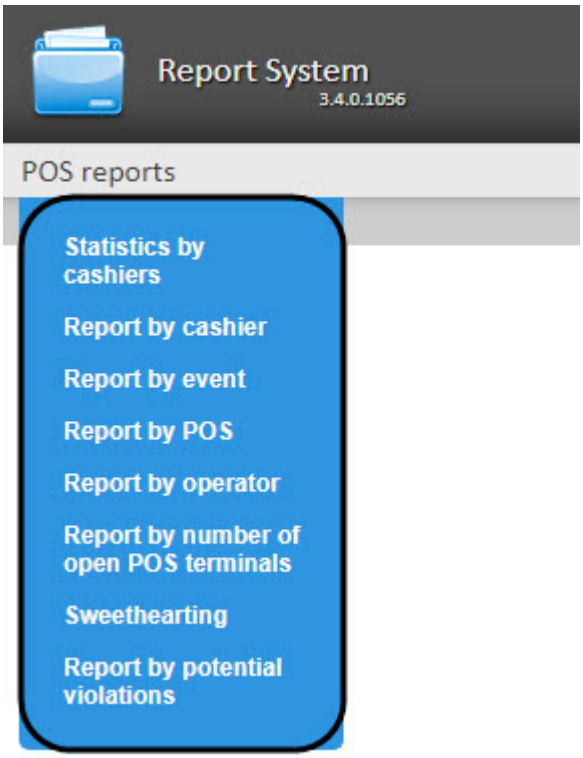
As a result the list of available general POS reports (with a short description of each one) is displayed:

1. Statistics by cashiers is a summary statistics table by cashiers;
2. Report by cashier is a general table of by cashier-related events;
3. Report by event is a general table by-events and by-cahsier related events;
4. Report by POS is a general table of by POS-related events;
5. Report by operator is a general table of by operator-related events;
6. Report by number of open POS terminals is a general table or a chart;
7. Sweethearting report opens a Sweetherting monitor (see Sweethearting monitor);
8. Report by potential violations is a general table by potential violations.



In order to switch to the required report click the corresponding link.

Note.
The list of links for switching to general POS reports is also available when hovering over a link to **POS reports** in the reports menu.

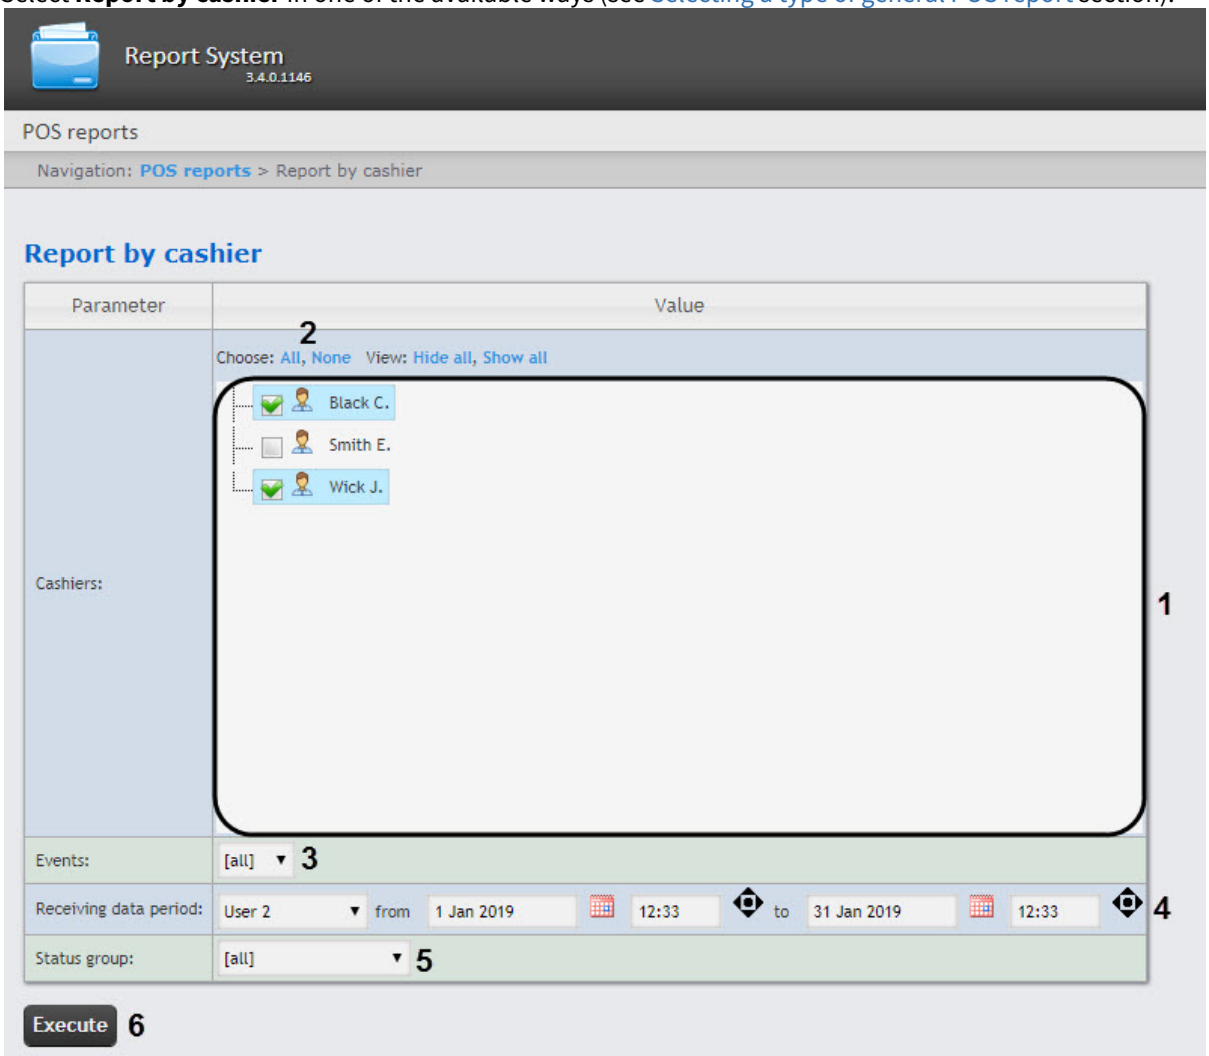


8.1.1.2 Stastics by cashiers

> **Important!**
> In order to generate the cashier stastistics, the **POS-terminal** object should be setup and configured in the *Intellect* (see The POS-terminal object setup).

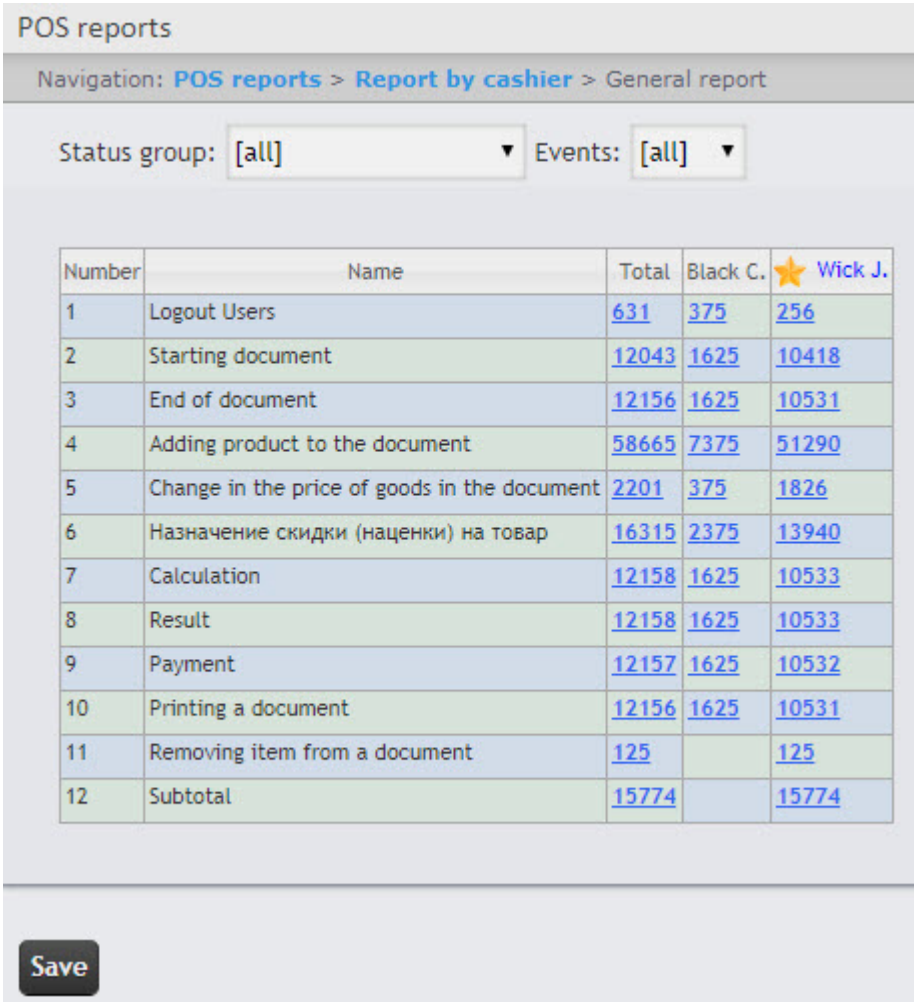
In order to display the cashier stastistics do the following:

1. Select **Report by cashier** in one of the available ways (see Selecting a type of general POS report section).



2. Specify the period in one of the following ways (**1**):
   a. By default, the **User defined** period is selected. Enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   b. There is also a possibility to build a report for a fixed period of time (a week, a month, etc.). These periods are selected in the drop-down list.
   c. Finally, the **User defined 2** period enables to enter the start and end time of period for which the report is to be created using the button.
3. Click **Execute** to run the report (**2**).

As a result of the operation, a summary table of events will be displayed for all the cashiers in accordance with predefined parameters. The number of events registered for each cachier will be dipolayed in the corresponding column. The **Total** column for each type of event will indicate the total number of events for each cashier.To view them, click the **[all]** link.



Number	Name	Total	Black C.	Wick J.
1	Logout Users	631	375	256
2	Starting document	12043	1625	10418
3	End of document	12156	1625	10531
4	Adding product to the document	58665	7375	51290
5	Change in the price of goods in the document	2201	375	1826
6	Назначение скидки (наценки) на товар	16315	2375	13940
7	Calculation	12158	1625	10533
8	Result	12158	1625	10533
9	Payment	12157	1625	10532
10	Printing a document	12156	1625	10531
11	Removing item from a document	125		125
12	Subtotal	15774		15774

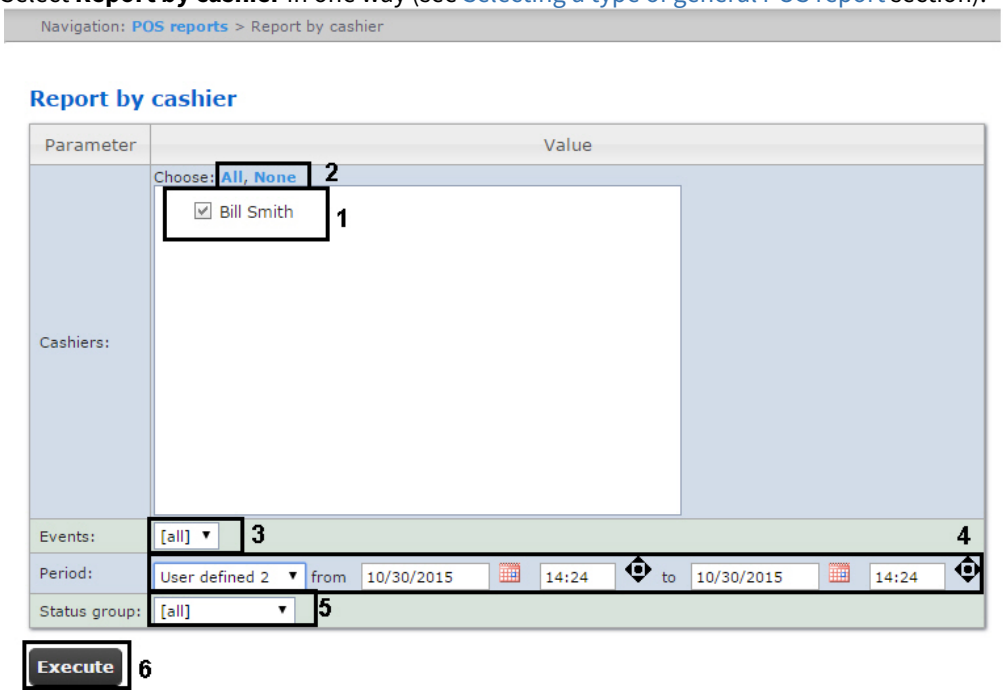
In order to save a general report by cashier in.xls format click **Save**.

8.1.1.3 Report by cashier

> **Important!**
> In order to generate a report by cashier, the **POS-terminal** object should be setup and configured in the Intellect (see The POS-terminal object setup).

In order to display a report by cashier do the following:

1. Select **Report by cashier** in one way (see Selecting a type of general POS report section).

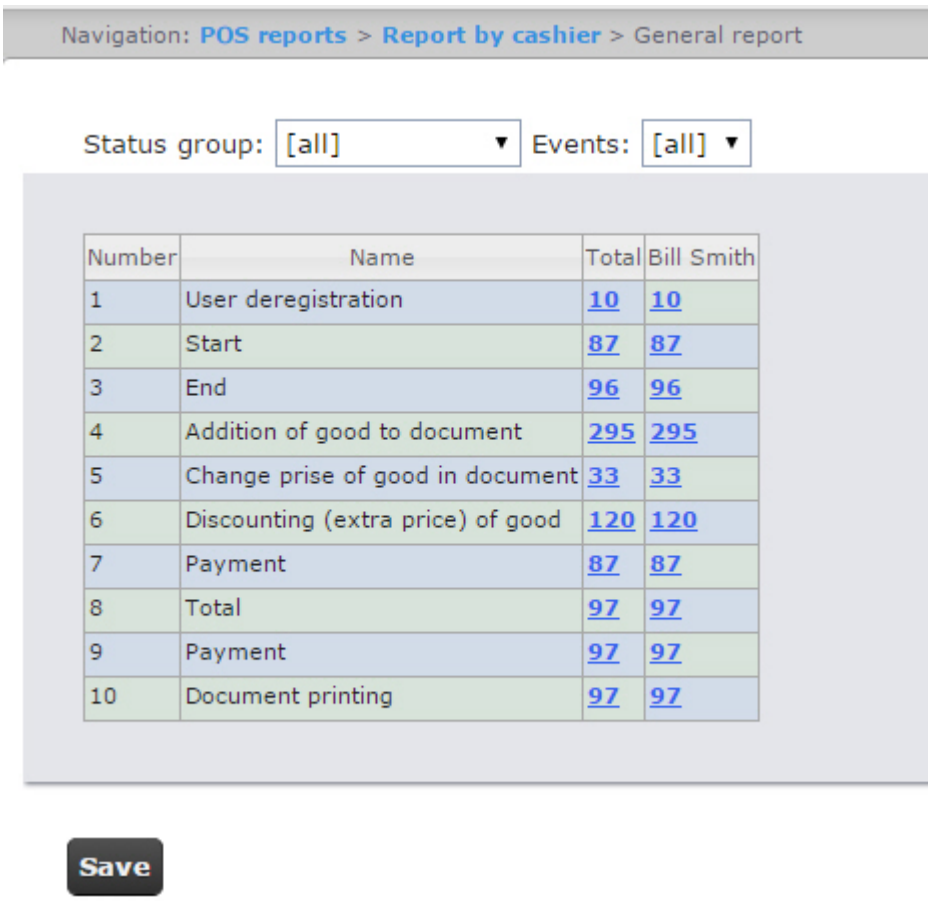


2. Select cashiers by whom it is necessary to display a report by setting corresponding checkboxes checked in the list (**1**).

> **Note.**
> In order to set checkboxes checked in every item of the list click **All**, to set all checkboxes unchecked click **None** (**2**).

3. Specify a filter of those events that should be displayed in a report (**3**). If **All** is selected then filter of events is not considered and report is created by all events.
4. Specify the period in the following way:
   a. From the **Period:** drop-down list select the time period for which the report is to be created (**4**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
5. Specify a group of statuses of those events that should be displayed in a report (**5**). If **All** is selected then all POS events are displayed regardless of their status.
6. Click **Execute** (**6**).

As a result a general table of by-cashier events (according to the parameters) is displayed. In the **Total** column the total amount of events is displayed by their type. In the column called by cashier name the amount of events registered for this cashier is displayed by their type.



In order to save a general report by cashier in .xls format, click **Save**.

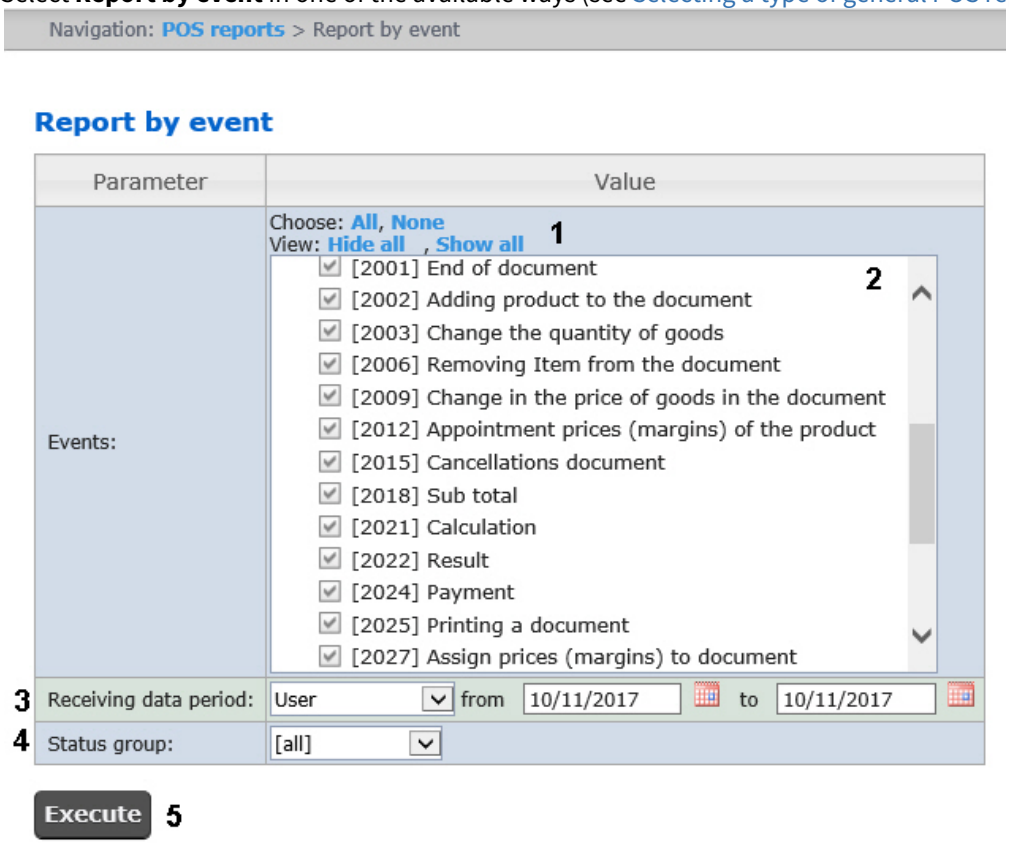
8.1.1.4 Report by event

Report by event allows viewing information on selected events including what shop and checkout lane they took place in, what cashier performed specified actions.

> **Important!**
> In order to generate a report by event, the **POS-terminal** object should be setup and configured in the *Intellect* (see The POS-terminal object setup).

In order to display a report by event do the following:

1. Select **Report by event** in one of the available ways (see Selecting a type of general POS report section).

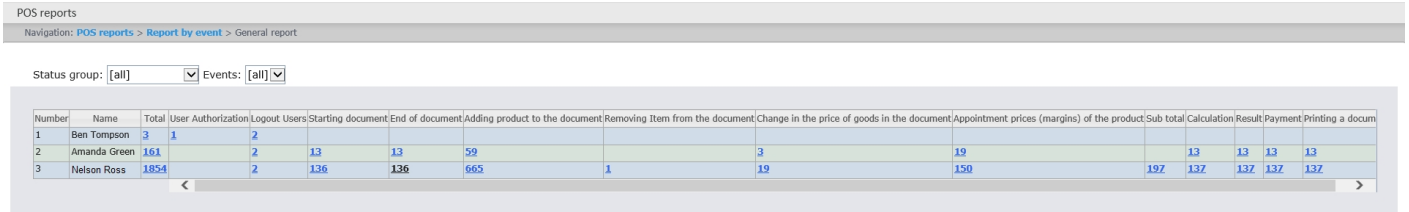


2. Select events to be displayed in the report by checking corresponding boxes in the list (**2**).

> **Note.**
> Click **All** to select every item on the list or **None** to remove selection (**1**).

3. Specify the period in the following way:
   a. From the **Receiving data period:** drop-down list select the time period for which the report is to be created (**3**).
   b. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
4. Specify a group of statuses of those events that should be displayed in a report (**4**). If **All** is selected then all POS events are displayed regardless of their status.
5. Click **Execute** (**6**).

As a result a general table of cashiers and events is displayed according to the specified parameters. A total of events for a cashier is displayed in the event type column.

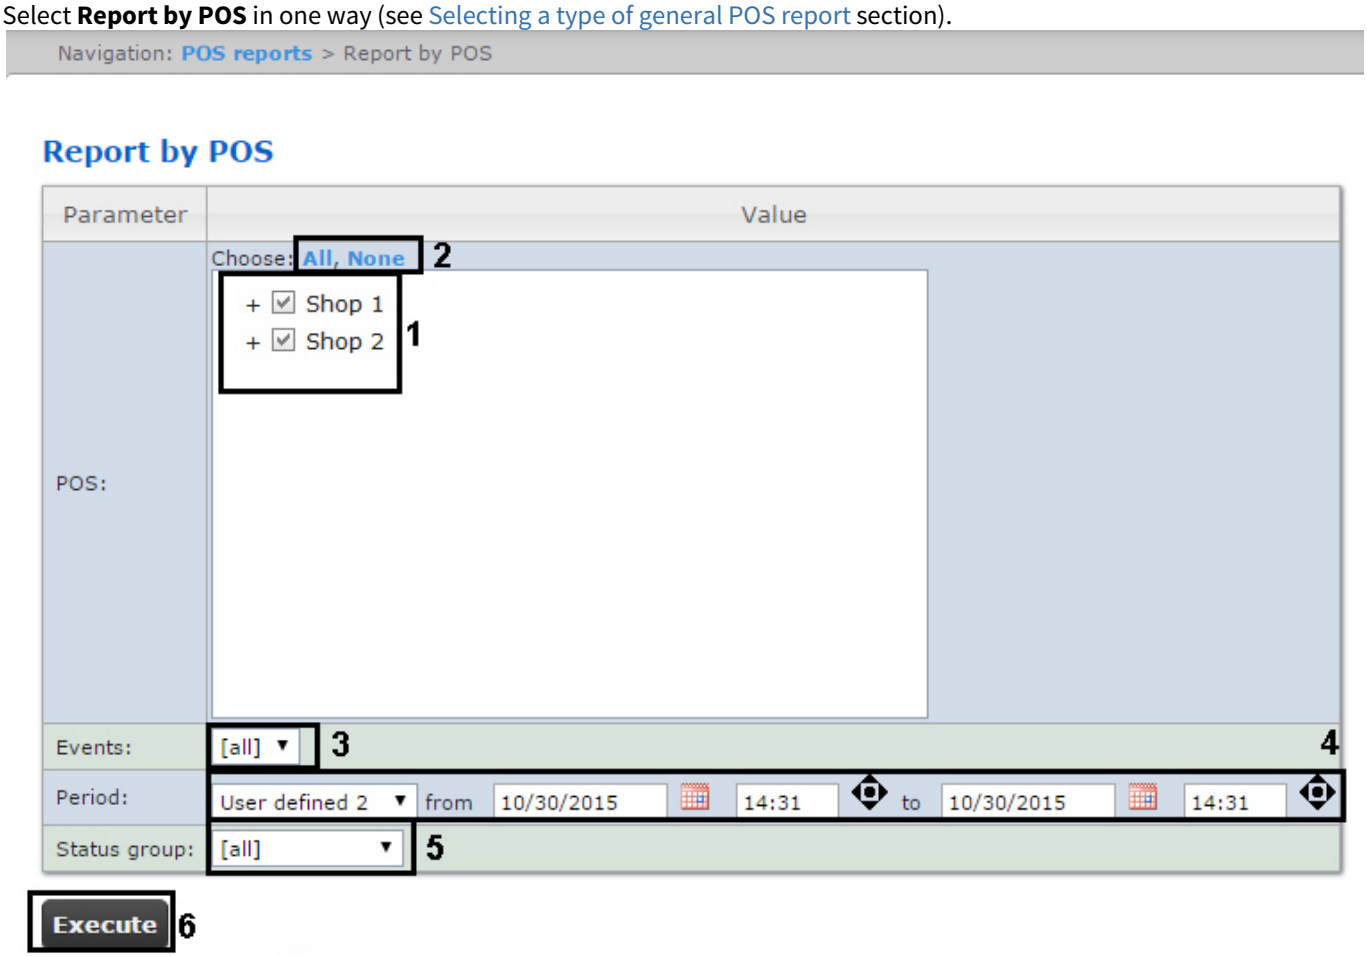


8.1.1.5 Report by POS

> **Important!**
> In order to generate a report by POS terminal, the **POS-terminal** and **Shop** objects should be setup and configured in the *Intellect* (see The POS-terminal object setup and Setting up the Shop system object).

In order to display a report by POS do the following:

1. Select **Report by POS** in one way (see Selecting a type of general POS report section).



2. Select POS terminals (cash desks) by which it is necessary to display a report by setting corresponding checkboxes checked in the list (**1**).

> **Note.**
> In order to set checkboxes checked in every item of the list click **All**, to set all checkboxes unchecked click **None** (**2**).

> **Note.**
> In order to select all POS terminals in one shop set a checkbox for this shop. In order to delete all POS terminals of a shop from report do vice versa: set a checkbox unchecked for this shop.

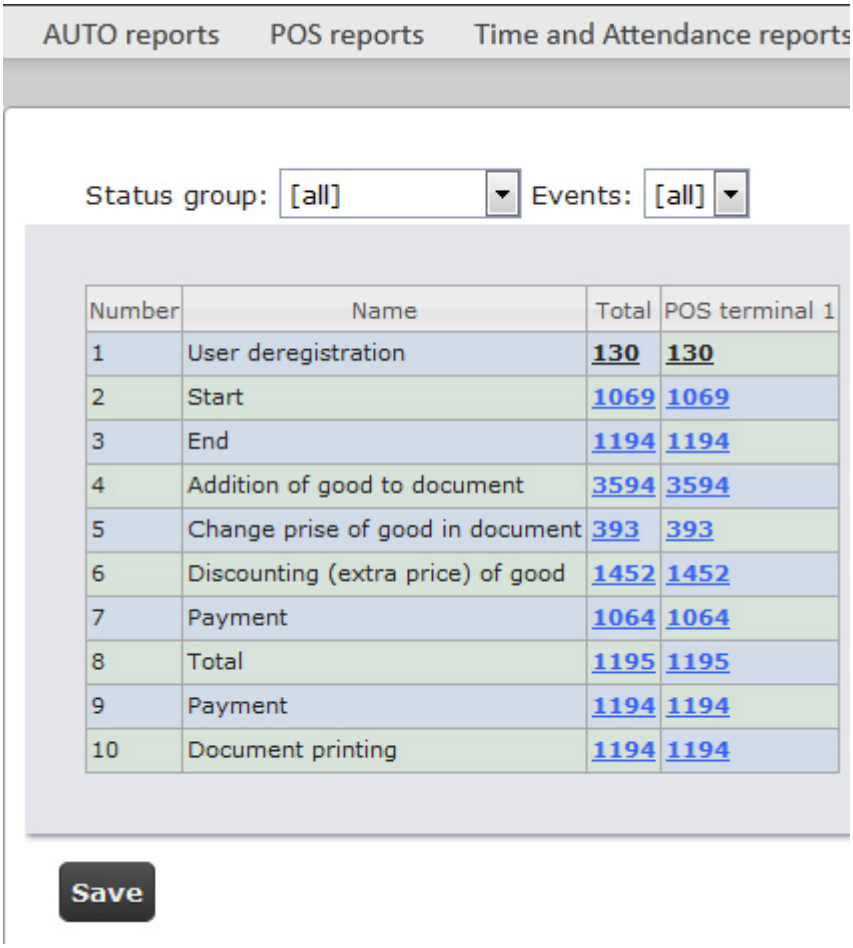
> **Note.**
> POS terminals which do not related with the shop are not available in the list.

3. Specify a filter of those events that should be displayed in a report (**3**). If **All** is selected then filter of events is not considered and report is created by all events.
4. Specify the period in the following way:

a. From the **Period:** drop-down list select the time period for which the report is to be created (**4**).
b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
If another period type is selected, specifying the date of start and end periods is not needed.

5. Specify a group of statuses of those events that should be displayed in a report (**5**). If **All** is selected then all events are displayed regardless of their status.
6. Click **Execute** (**6**).

As a result a general table of by POS events (according to the parameters) is displayed. In the **Total** column the total amount of events is displayed by their type. In the column called by cash desk name the amount of events registered for this cash desk is displayed by their type.



Number	Name	Total	POS terminal 1
1	User deregistration	130	130
2	Start	1069	1069
3	End	1194	1194
4	Addition of good to document	3594	3594
5	Change prise of good in document	393	393
6	Discounting (extra price) of good	1452	1452
7	Payment	1064	1064
8	Total	1195	1195
9	Payment	1194	1194
10	Document printing	1194	1194

In order to save a general report by POS terminals in.xls format click **Save**.

8.1.1.6 Report by operator

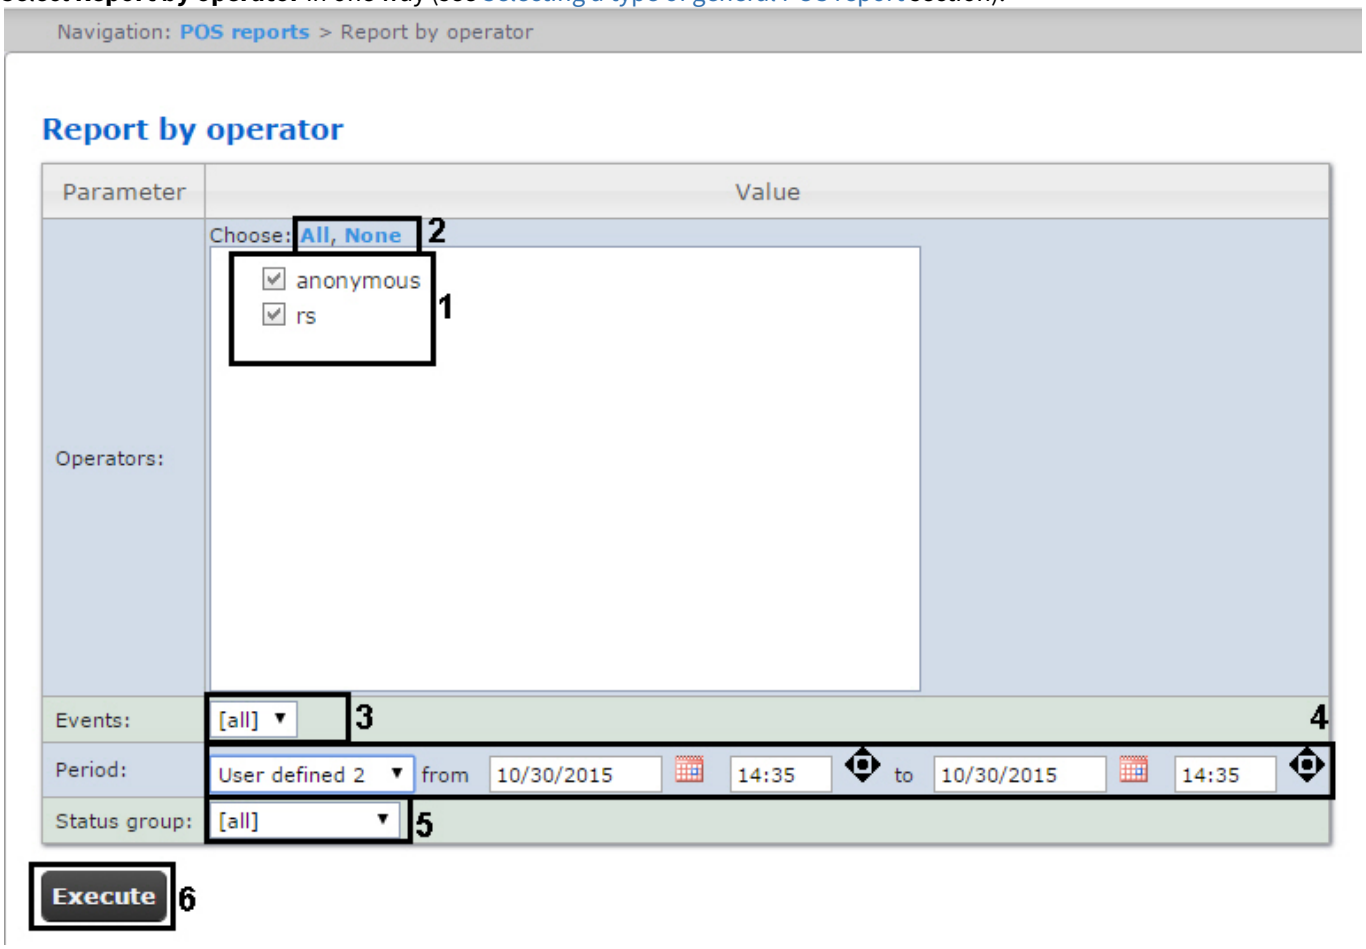
One can create reports by POS operators that gave one or another status to POS events.

Important!
In order to generate a report by POS operator, the **POS-terminal** object should be setup and configured in the *Intellect* (see The POS-terminal object setup).

Note
To configure the list of POS operators, see Creating the list of POS operators.

In order to display a report by POS operator do the following:

1. Select **Report by operator** in one way (see Selecting a type of general POS report section).

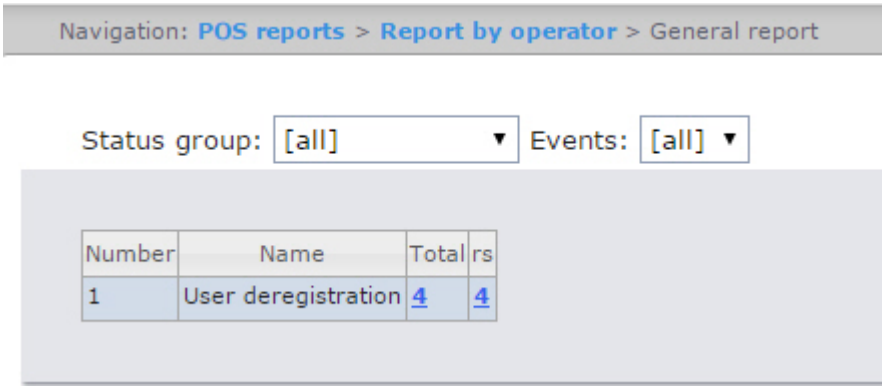


2. Select POS operators by which it is necessary to display a report by setting corresponding checkboxes checked in the list (**1**).

> **Note.**
> In order to set checkboxes checked in every item of the list click **All**, to set all checkboxes unchecked click **None** (**2**).

3. Specify a group of those events that should be displayed in a report (**3**). If **All** is selected then filter of events is not considered and report is created by all events.
4. Specify the period in the following way:
   a. From the **Period:** drop-down list select the time period for which the report is to be created (**4**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
5. Specify a group of statuses of those events that should be displayed in a report (**5**). If **All** is selected then all events are displayed regardless of their status.
6. Click **Execute** (**6**).

As a result a general table of by-operator events (according to the parameters) is displayed. In the **Total** column the total amount of events is displayed by their type. In the column called by POS operator name the amount of events processed by this operator (changed a status) is displayed by their type.



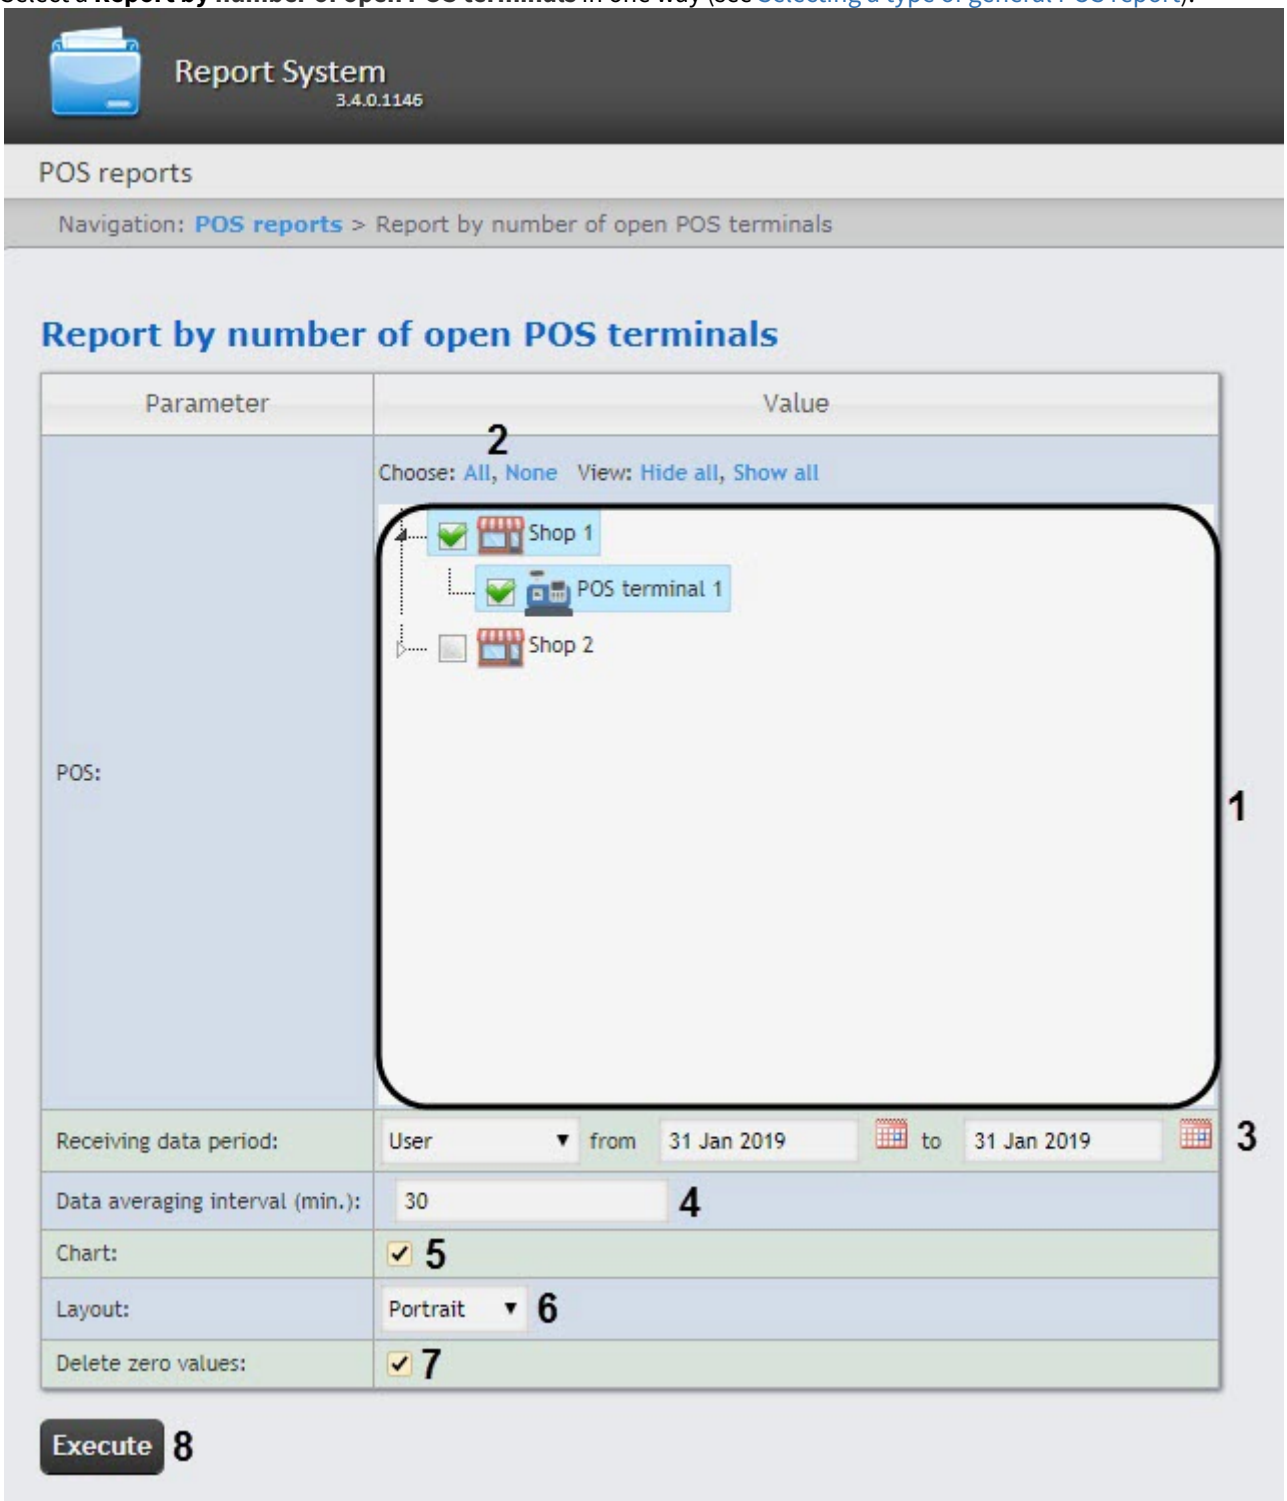
In order to save a general report by POS operators in.xls format click **Save**.

8.1.1.7 Report by number of open POS terminals

> **Important!**
> In order to generate a report by number of open POS terminals, the **POS-terminal** and **Shop** objects should be set up and configured in the *Intellect* (see The POS-terminal object setup and Setting up the Shop system object).

In order to display a report by number of open POS terminals, do the following:

1. Select a **Report by number of open POS terminals** in one way (see Selecting a type of general POS report).



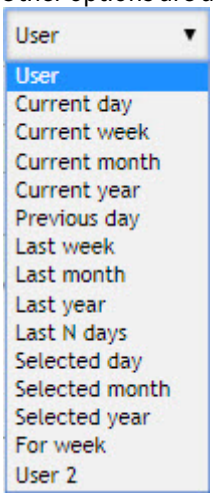
2. Select POS terminals (cash desks) by which it is necessary to display a report by setting corresponding checkboxes checked in the list (**1**).

> **Note**
> In order to set checkboxes checked in every item of the list click **All**, to set all checkboxes unchecked click **None** (**2**).

> **Note**
> In order to select all POS terminals in one shop set a checkbox for this shop. In order to delete all POS terminals of a shop from report do vice versa: set a checkbox unchecked for this shop.

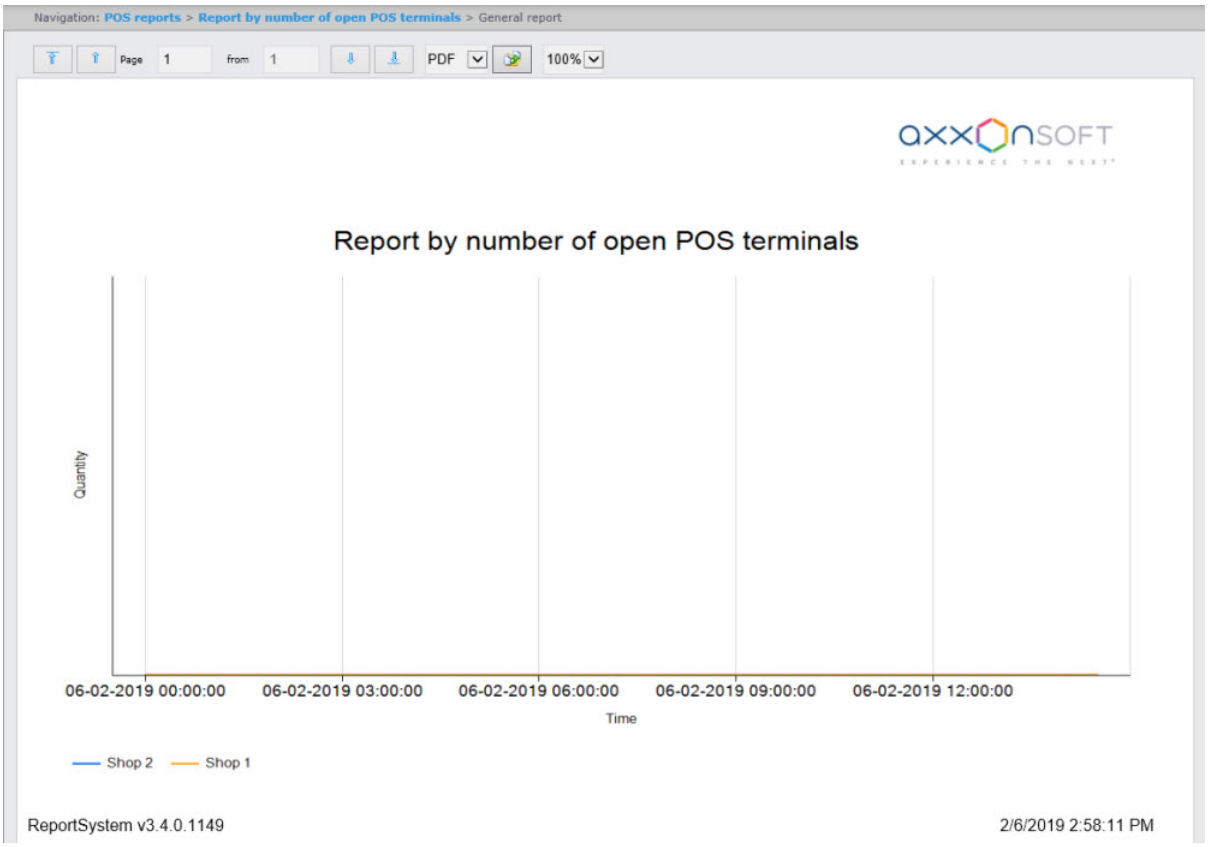
> **Note**
> POS terminals which do not related with the shop are not available in the list.

3. Specify the period in the following way:
   a. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**3**).
   b. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
   d. Other options are also available:



4. Specify the data averaging interval in minutes (**4**).
5. Set the **Chart** checkbox to display the report as a chart (**5**).
6. In the **Layout** drop-down list select the report orientation (landscape or portrait) (**6**).
7. Set the **Delete zero values** checkbox in order to not display the open POS terminals in the report if their number equals zero (**7**).
8. Click **Execute** to start the report generation (**8**).

As a result, a summary table or a chart will be displayed containing the number of open POS terminals in accordance with the specified parameters. In the report is displayed as a chart, then the number of open POS terminals will be displayed along the vertical line, and the time corresponding to the number of open POS terminals will be displayed along the horizontal line.



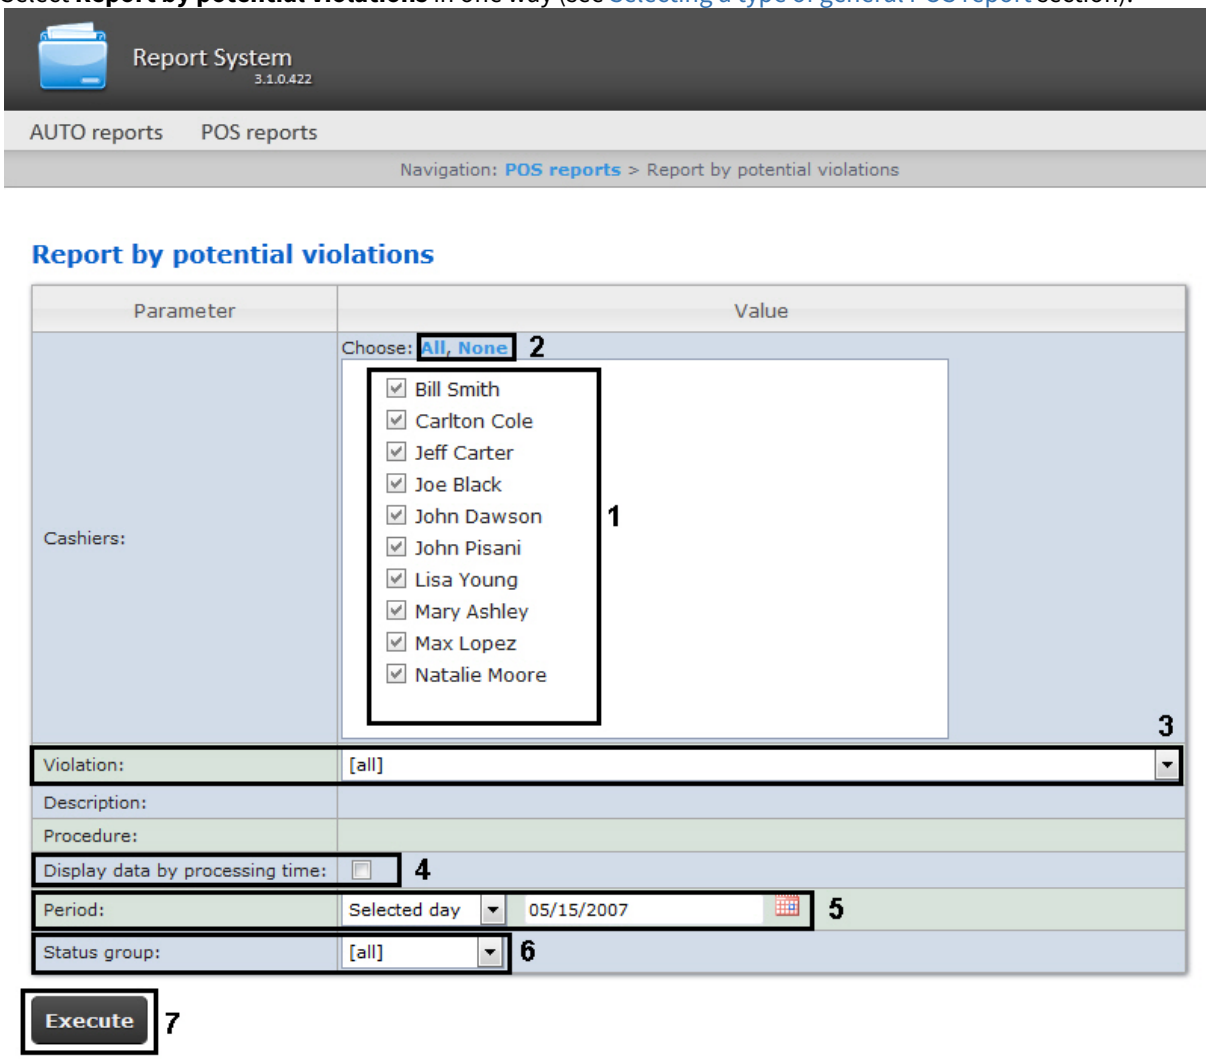
You can export the generated report (see Exporting of reports).

8.1.1.8 Report by potential violations

> **Important!**
> In order to generate a report by potential violations, the **POS-terminal** object should be setup and configured in the *Intellect* (see The POS-terminal object setup).

In order to display a report by potential violations, do the following:

1. Select **Report by potential violations** in one way (see Selecting a type of general POS report section).



2. Select cashiers by whom it is necessary to display a report by setting corresponding checkboxes checked in the list (**1**).

> **Note.**
> In order to set checkboxes checked in every item of the list click **All**, to set all checkboxes unchecked click **None** (**2**).

3. Select potential violations which should be displayed in a report (**3**). If **All** is selected then all types of violations will be displayed in a report.
4. Set the **Display data by processing time:** checkbox to add time waisted by operator for choosing the event status (**4**). Time between selecting the string in the detailed report and changing the event status of this string is counted. If the checkbox is not set, the processing time will not be calculated and displayed in the report.
5. Specify the period in the following way:
   a. From the **Period:** drop-down list select the time period for which the report is to be created (**5**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
6. Specify a group of statuses of those potential violations that should be displayed in a report (**6**). If **All** is selected then all violations are displayed regardless of their status.

7. Click **Execute** (**7**).

As a result a general table of potential violations according to the specified parameters is displayed. In the **Total** column the total amount of potential violations is displayed by their type. In the column called by cashier name the amount of potential violations registered for this cashier is displayed by their type.

	Name	Total	Bill Smith
ⓘ	Cancellation of all the goods in the check followed by the addition of positions on the same receipt	0 (0:00)	0 (0:00)
ⓘ	Unauthorized reduction in the price of the goods	**1030** (0:28)	**1030** (0:28)
ⓘ	Unauthorized increase in the price of the goods	1030 (0:28)	1030 (0:28)
ⓘ	Intended ignoring some goods	350 (0:00)	350 (0:00)
ⓘ	Intended change of how the goods look	**1261** (0:00)	**1261** (0:00)
ⓘ	Erroneous double scanning	0 (0:00)	0 (0:00)
ⓘ	DISABLED: Unintended change of how the goods look ("Enter product code" number needed)	0 (0:00)	0 (0:00)
ⓘ	Ignoring some goods while scanning	0 (0:00)	0 (0:00)
ⓘ	Errors while canceling the quantity of goods	0 (0:00)	0 (0:00)
ⓘ	Cash register reset by the cashier	0 (0:00)	0 (0:00)
ⓘ	Not giving the receipt to the customer	0 (0:00)	0 (0:00)
ⓘ	Recounting contents of the cash register	1 (0:00)	1 (0:00)
ⓘ	Intended reduction in the number of the goods	0 (0:00)	0 (0:00)
ⓘ	Cancellation of the receipt when the administrator is absent	0 (0:00)	0 (0:00)
ⓘ	Intended ignoring some goods using the "Product info" button	0 (0:00)	0 (0:00)

In order to save a general report by cashier in.xls format click **Save**.

8.1.2 Detailed reports

One can view and process the following detailed reports by event:

1. for specific cashier/POS terminal/POS operator;
2. for all cashiers/POS terminals/POS operators.

A detailed report enables viewing data from the POS terminal that corresponds to the POS event. It also enables viewing an event archive (if there are relevant settings in *POS Intellect* software package).

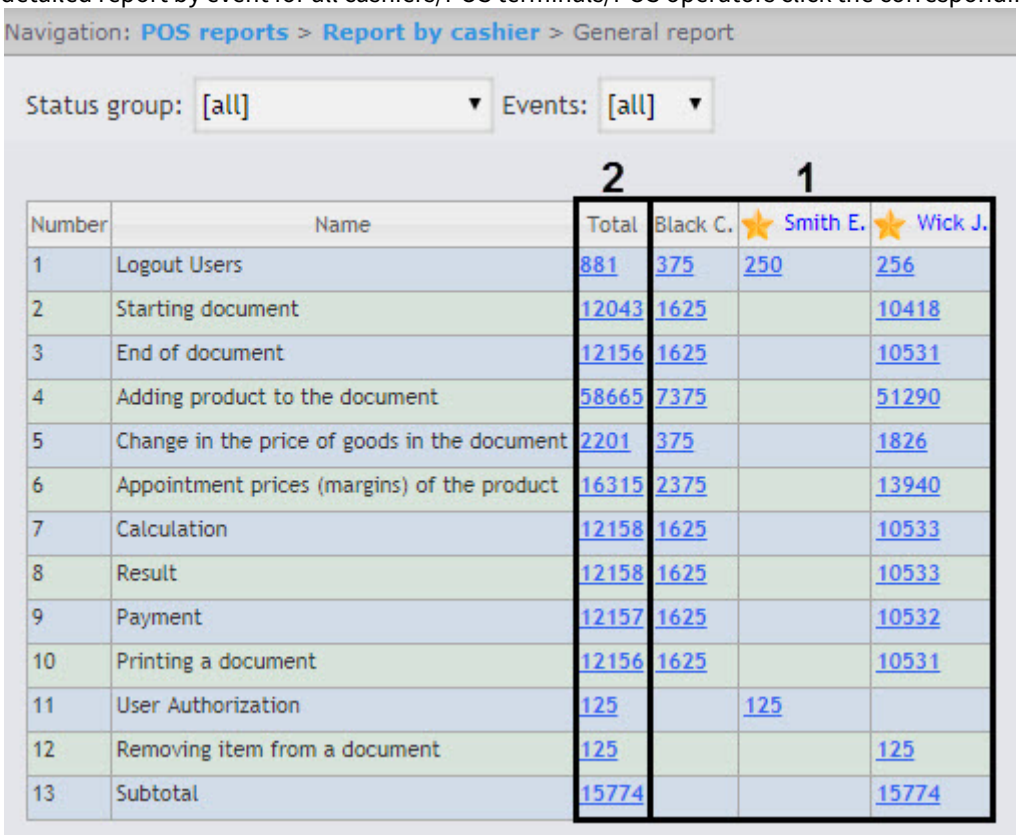
Detailed reports are created on the basis of corresponding general reports (e.g. a detailed report by cashier is created on the basis of a general report by cashier).

8.1.2.1 Viewing a detailed report

In order to view a detailed report, do the following:

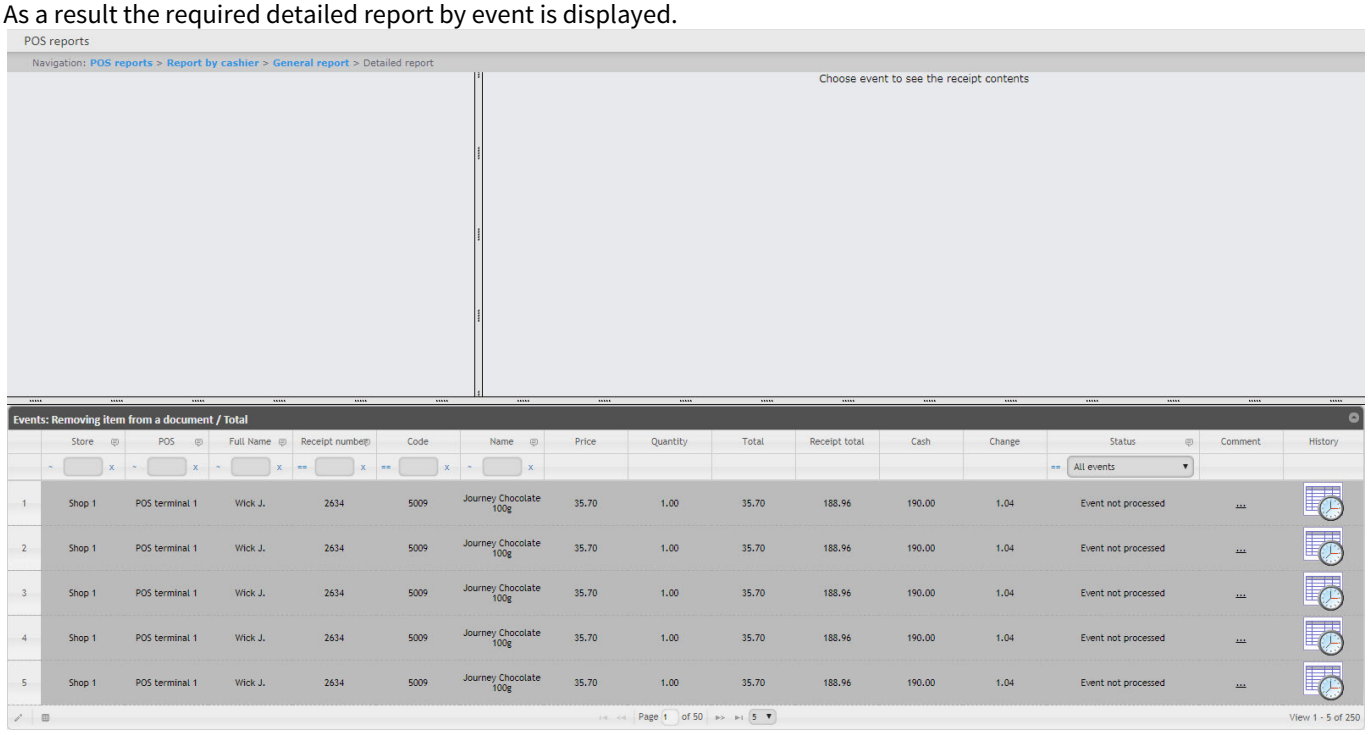
1. Generate a general report of the required type (see General reports).

2. Click the link in the cell corresponding to a necessary event and a cashier/POS terminal/POS operator (**1**). To display a detailed report by event for all cashiers/POS terminals/POS operators click the corresponding link in the **Total** cell (**2**).



Number	Name	Total	Black C.	Smith E.	Wick J.
1	Logout Users	881	375	250	256
2	Starting document	12043	1625		10418
3	End of document	12156	1625		10531
4	Adding product to the document	58665	7375		51290
5	Change in the price of goods in the document	2201	375		1826
6	Appointment prices (margins) of the product	16315	2375		13940
7	Calculation	12158	1625		10533
8	Result	12158	1625		10533
9	Payment	12157	1625		10532
10	Printing a document	12156	1625		10531
11	User Authorization	125		125	
12	Removing item from a document	125			125
13	Subtotal	15774			15774

3. As a result the required detailed report by event is displayed.

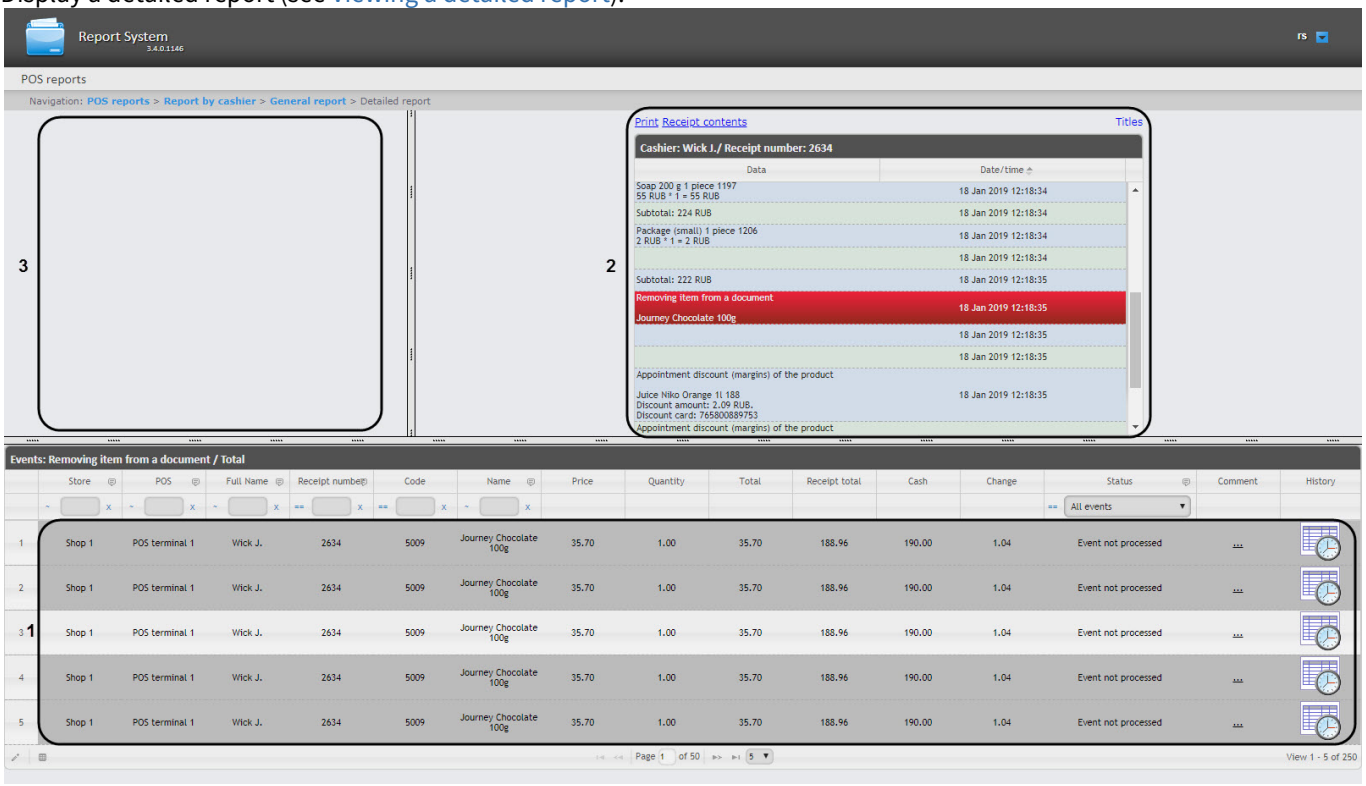


All detailed reports are identical in structure and represent the table. To configure the columns displayed in the table, see Select columns in detailed reports.

8.1.2.2 Viewing data from the POS terminal and the video of event

In order to view data from the POS terminal and video of event, do the following:

1. Display a detailed report (see Viewing a detailed report).



2. Left-click the line with the required event (**1**).
3. As a result data from the POS terminal by event (**2**) and video events (**3**) are displayed in the provided windows.

Window for viewing the video by event is a standard *Intellect* video surveying window that is open in the archive mode. One can view the archive not only by the current event but also by other events.

> **Note.**
> Working with video surveying window in the archive mode is given in details in Intellect software package. Operator's guide.

> **Note.**
> Video can not be displayed (it depends on whether the requirements for Web server and/or Client realization are performed – see the Requirements for Intellect Web Report System implementation section).

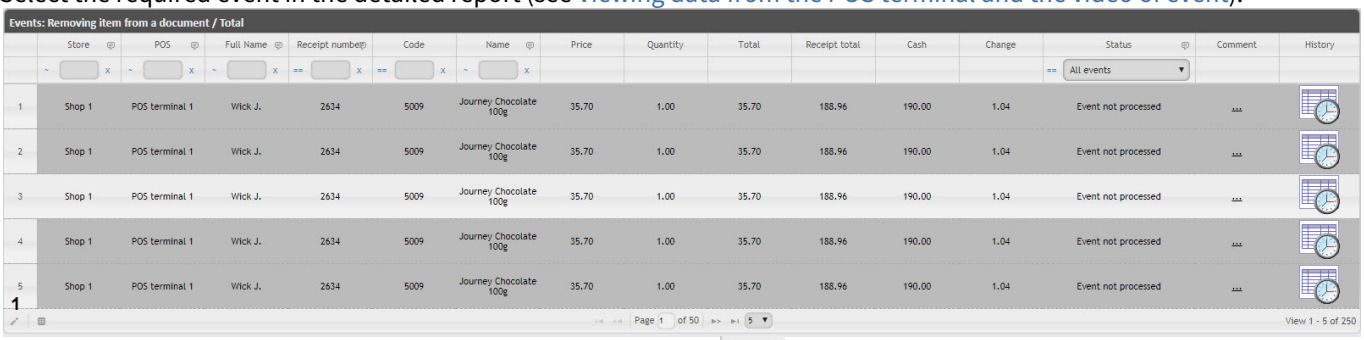
> **Note.**
> The view of displayed data from the POS terminal and video events can be changed by selecting the needed layout (see Selecting layouts in POS reports section).

8.1.2.3 Changing the event status and the comment

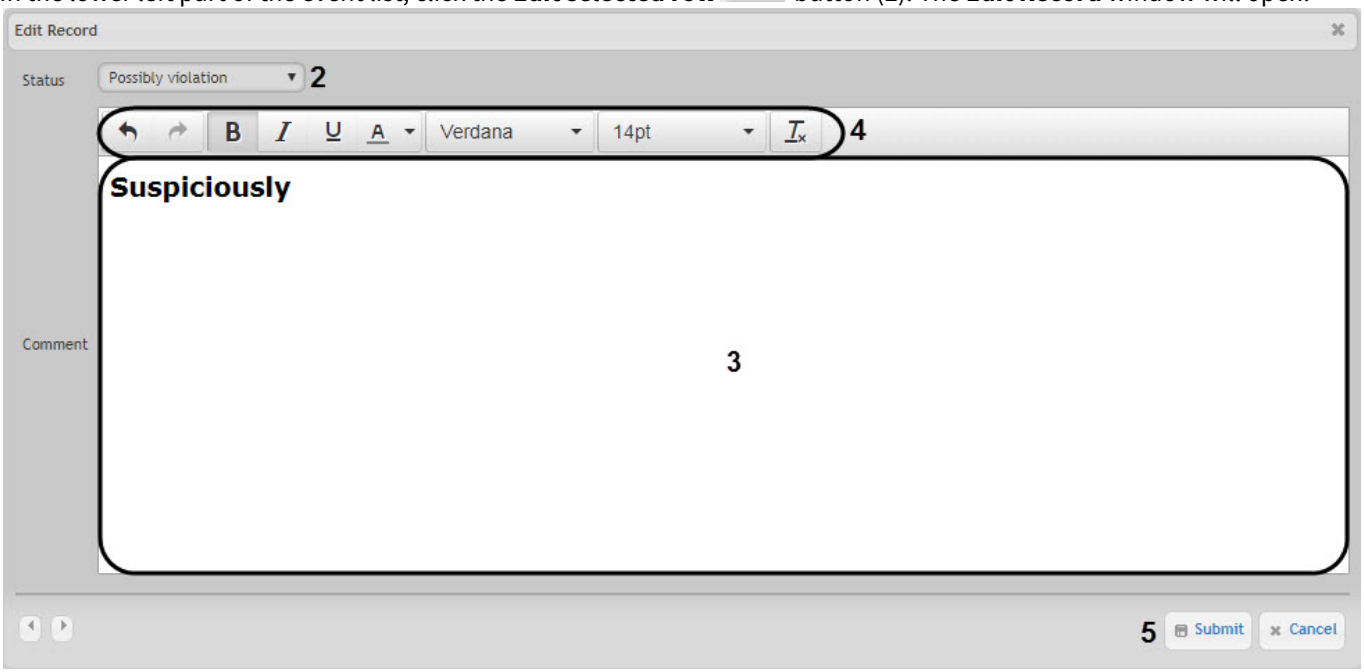
> **Attention!**
> For this operation the user should be added to the POS expert role.

In order to change the event status and the comment, do the following:

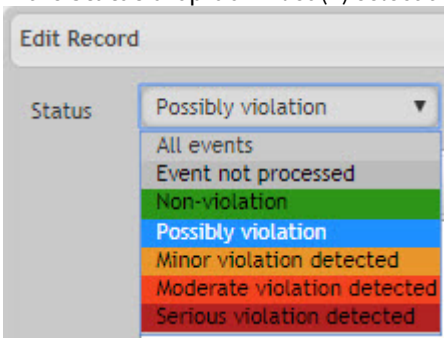
1. Select the required event in the detailed report (see Viewing data from the POS terminal and the video of event).



2. In the lower left part of the event list, click the **Edit selected row** button (**1**). The **Edit Record** window will open.



3. In the **Status** drop-down list (**2**) select the required event status.



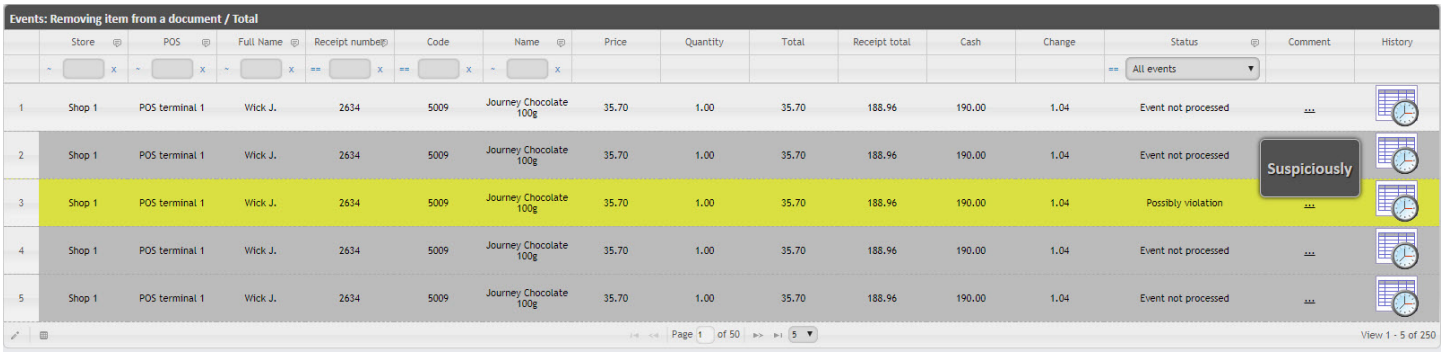
> **Note**
> The statuses in the list can be changed (see Setting up the statuses of POS events).

4. If necessary, enter a comment in the field (**3**). Text formatting tools are displayed on the panel (**4**).
5. Click **Submit** (**5**) to apply the changes.

As a result, the status for the specified event will be changed and the comment will be specified.

Note

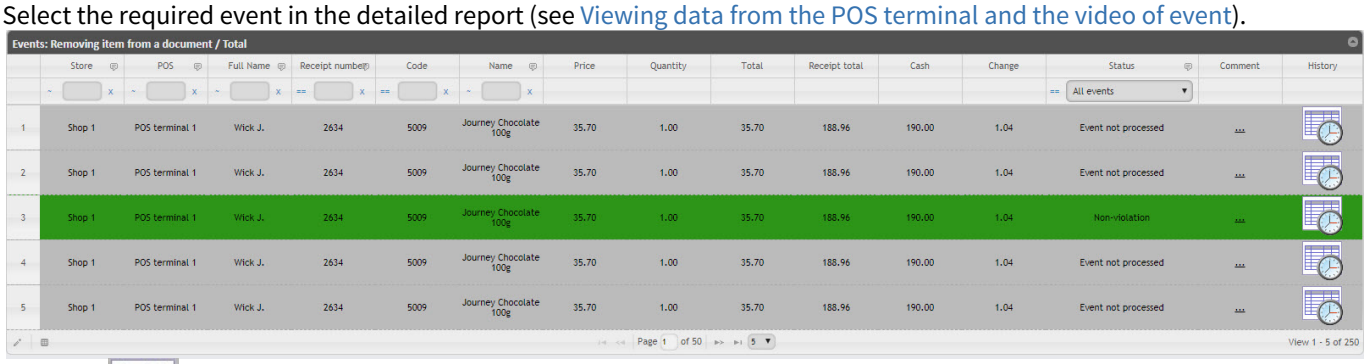
To view a comment, click the ellipsis ... in the **Comment** column of the corresponding event. As a result, a pop-up window containing the comment text will appear.



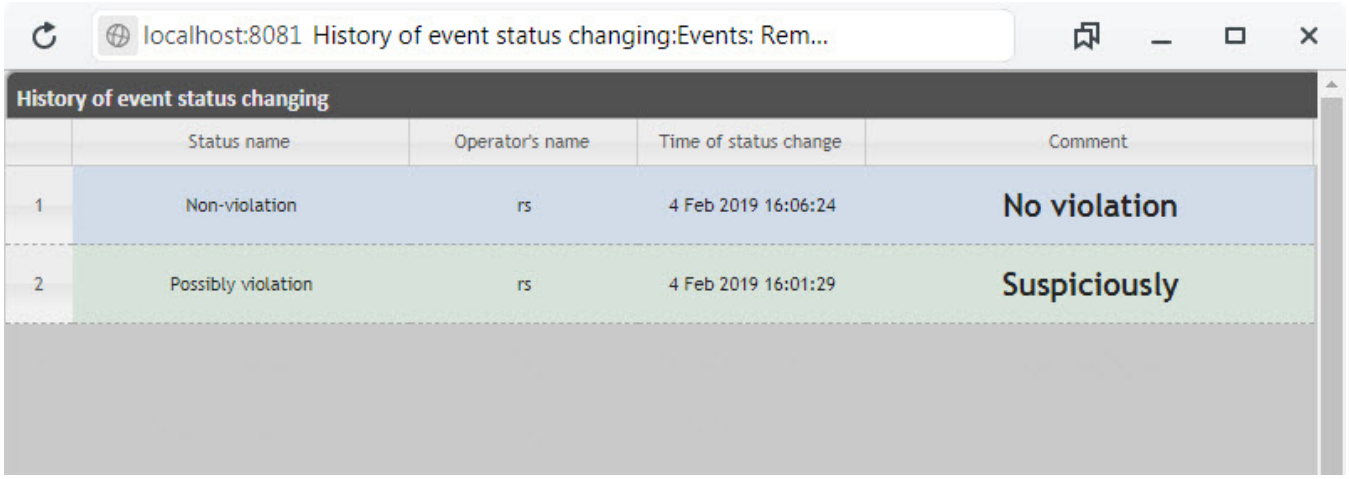
8.1.2.4 Viewing the history of event status or comment changing

In order to view the history of the event status or the comment changing, do the following:

1. Select the required event in the detailed report (see Viewing data from the POS terminal and the video of event).



2. Click the button in the **History** column of the corresponding event.
3. As a result, the **History of event status changing** page will open. The following data is displayed on the page:
   - Status name;
   - Operator's name;
   - Time of status change;
   - Comment.



Note

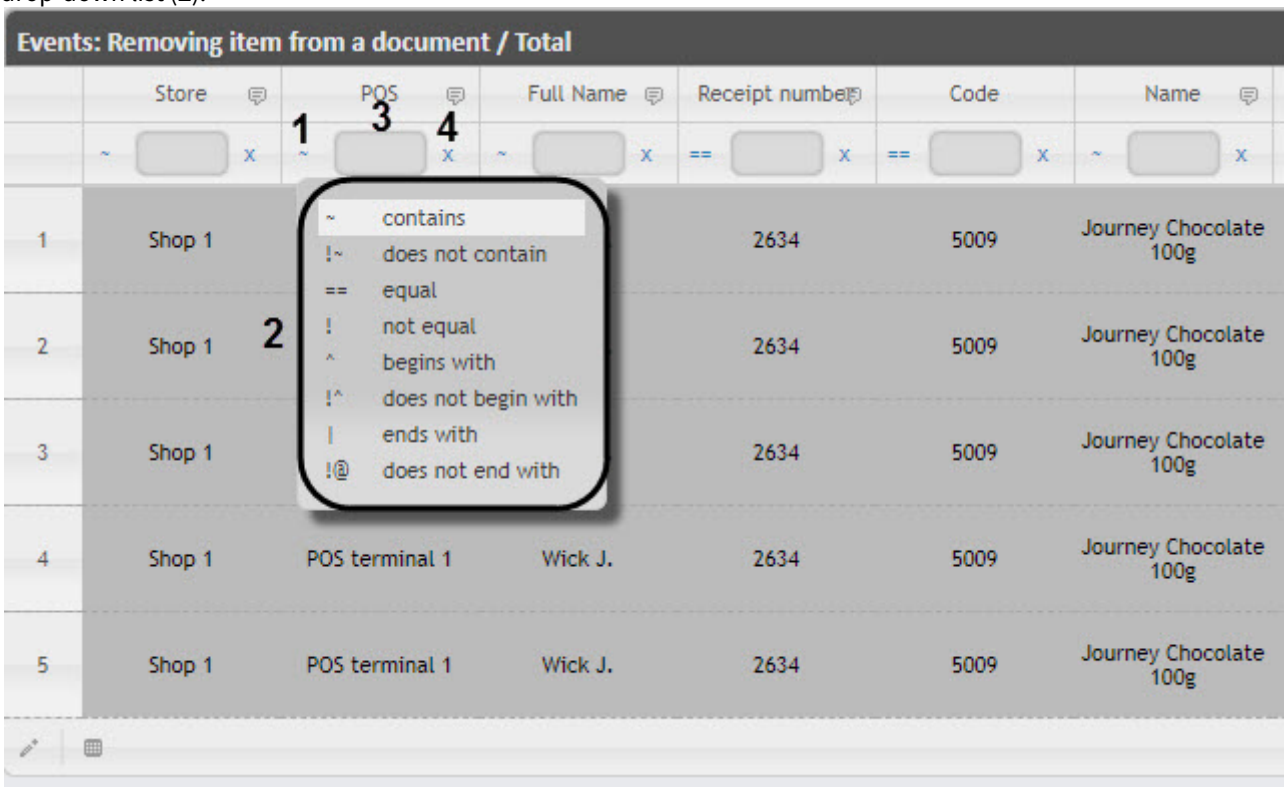
If the event status or comment has not changed, then the **History of event status changing** page will be empty.

8.1.2.5 Filtering and sorting events in detailed reports

To filter and sort events in the detailed POS report, do the following:

1. Display a detailed report (see Viewing a detailed report).

2. In the column containing the data required for filtering, click on the icon (**1**) and select the filtering condition from the drop-down list (**2**).



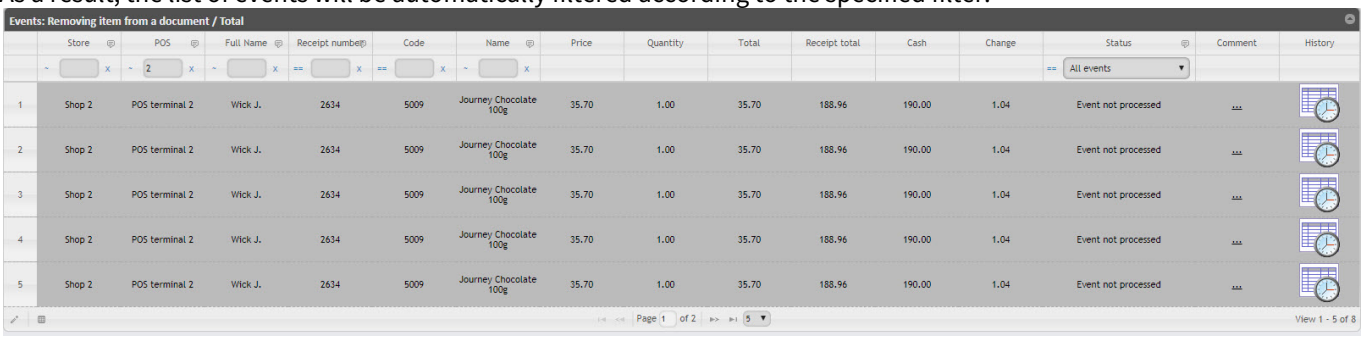
> **Note**
> For some columns, the filtering is not available.

> **Note**
> The list of filtering conditions (**2**) may differ depending on the selected column. For example, for the **Receipt number**, **Code**, and **Status**, columns only 2 conditions are available: **equal "=="** and **not equal "!"**.

3. In the field (**3**) enter the required filter value.

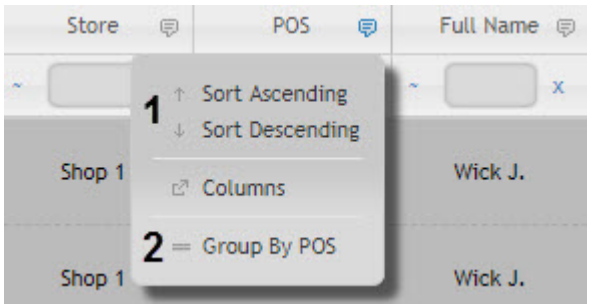
> **Note**
> The filter values of the **Status** column depend on the specified statuses in the *Intellect Web Report System*(see Setting up the statuses of POS events).

4. As a result, the list of events will be automatically filtered according to the specified filter.



5. To reset the filter, click the (**4**) button.
6. To sort the events in the detailed POS report, left-click on the column name.
7. As a result, the event list will be automatically sorted. The icon corresponding to the current sorting condition will appear next to the column name:
   - - Descending.
   - - Ascending.

> **Note**
> The data in some columns can also be sorted by clicking the button next to the column name. In this case, the ascending and descending sorting (**1**) and grouping option (**2**) will be available for the selected column.



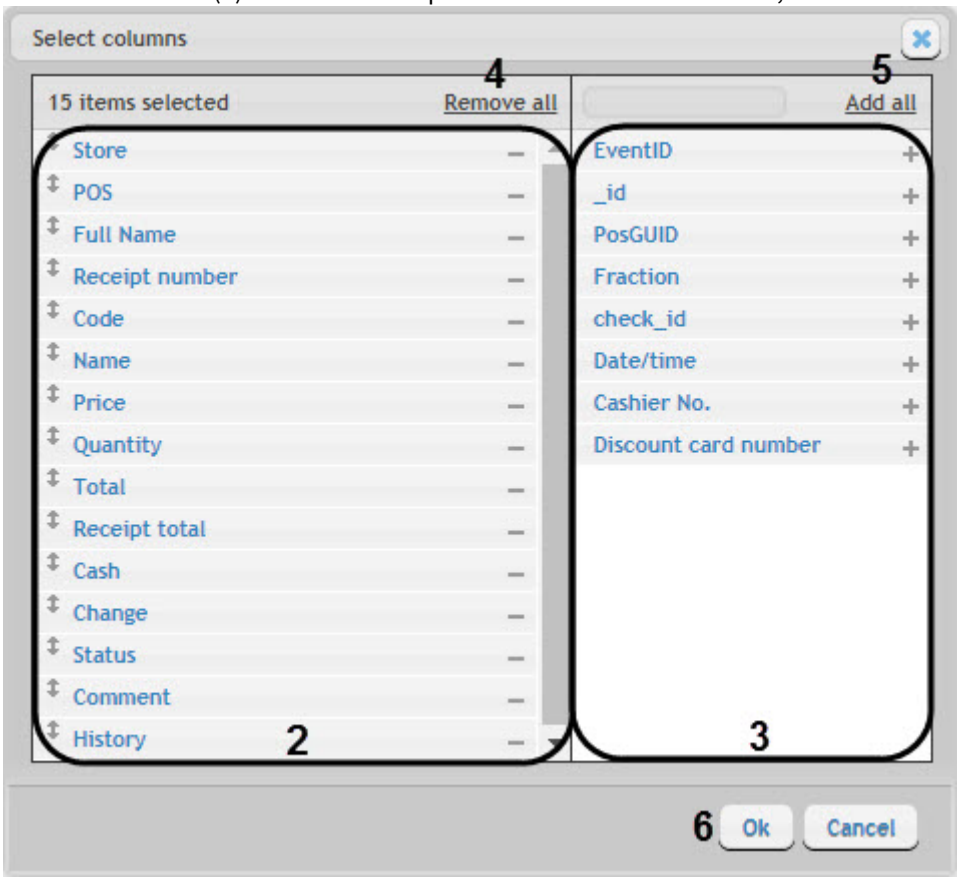
The filtering and sorting the events in the detailed reports is complete.

8.1.2.6 Select columns in detailed reports

To select the columns displayed in the detailed POS report, do the following:

1. Display a detailed report (see Viewing a detailed report).

2. Click the button (**1**) in the lower left part of the event list. As a result, the **Select columns** window will open.



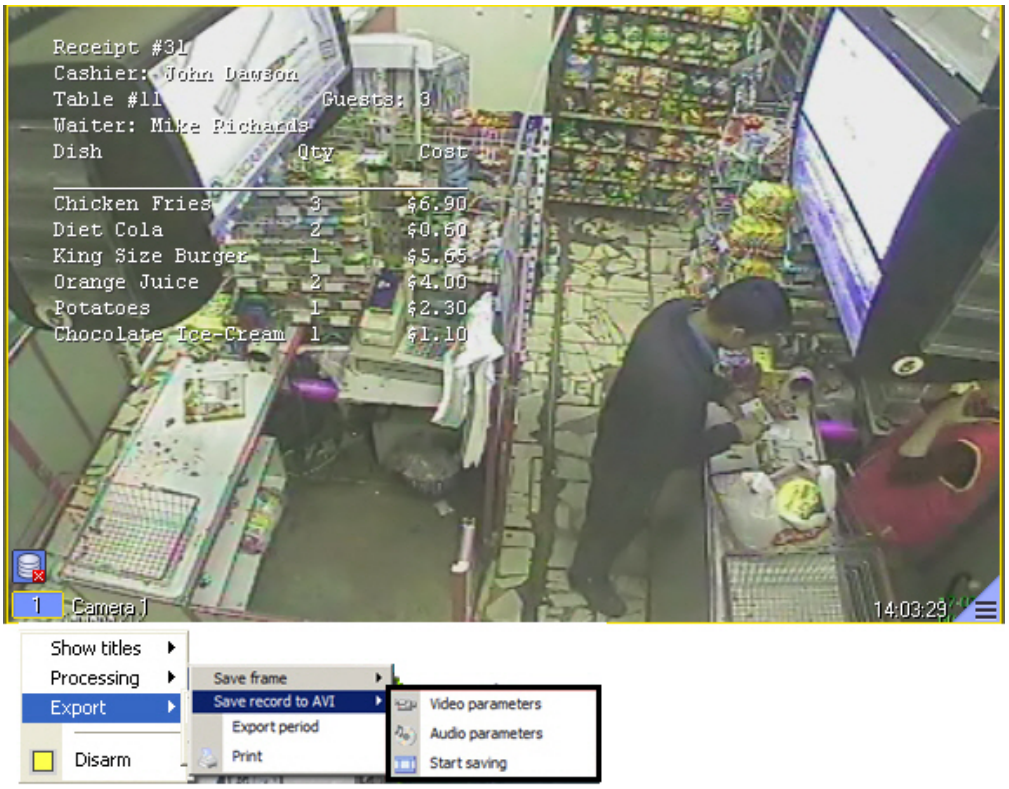
3. The active (displayed) columns are displayed in the (**2**) field.
   - To remove a column, click on the − icon next to the name of the corresponding column in the field (**2**).
   - To remove all columns, click **Remove all** (**4**).
   - To change the order of the columns, in the field (**2**) drag the column name up and down to the required position.
4. The inactive (not displayed) columns are displayed in the (**3**) field.
   - To add a column, click on the + icon next to the name of the corresponding column in the field (**3**).
   - To add all columns, click **Add all** (**4**).
5. To save changes, click **Ok** (**6**).

Selecting the columns to be displayed in the detailed reports is completed.

8.1.2.7 Exporting the video

The video recording segment is exported using the playback control panel.

Choose **Export** in the functions menu of the video surveillance window and then select **Save Recording to AVI**.



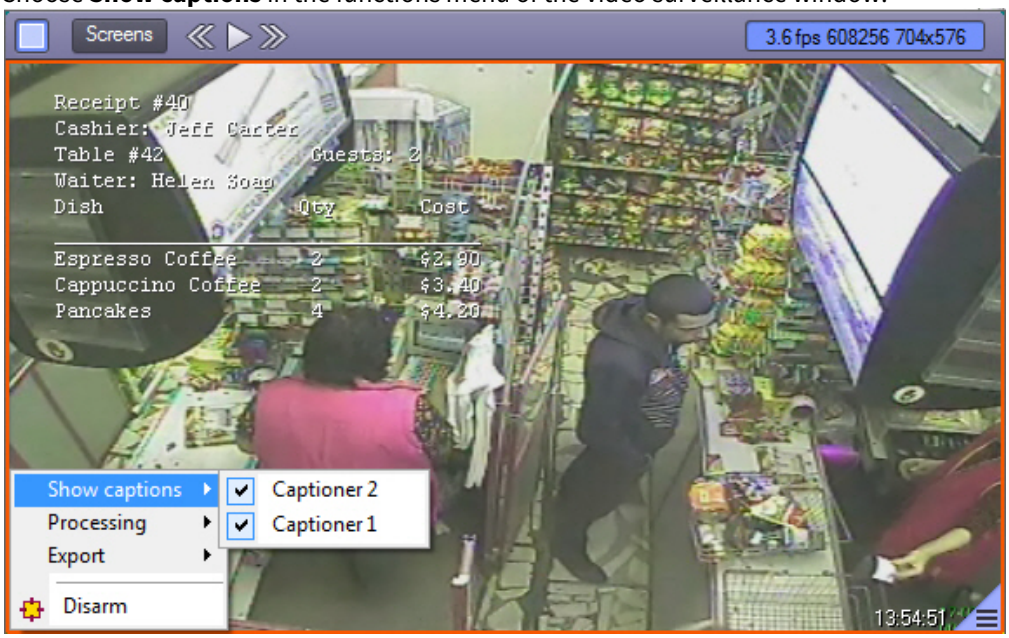
Parameters of the video and audio, which will be saved, may be configured in the displayed window. As soon as recording saving parameters are selected, the video segment may be exported to the file by selecting the **Start Saving** command (exporting the video is given in details in the Export of Silent Video Recordings section in Intellect software package. Operator's guide).

On default, exporting the video is performed to the *My documents*|*Export* folder.

8.1.2.8 Disabling captions in the video surveying window

To disable captions in the video surveying window, do the following:

1. Choose **Show captions** in the functions menu of the video surveillance window.



2. In the displayed list of available captioners select those from which captions are to be received.
3. To disable captions from some captioners left-click the line with the required captioner.

8.1.3 Sweethearting monitor

Important!
The **Sweethearting** report is generated automatically based on the data from the **Sweetherting detection module**, which is part of the *Intellect Detector Pack* (see Configuring the «Sweethearting detection» module for details).

The **Sweethearting** detailed report enables real-time monitoring of goods scanning events by cashiers in order to prevent intentional theft by carrying goods past the barcode scanner (so-called *sweethearting*).

Open the **Sweethearting** report (see Selecting a type of general POS report). The interface of the **Sweethearting monitor** is shown in the picture below.

Important!
Events appear in the report only if there is no **Add goods** event at the same second as the event from the **Sweetherting detection** object of POS-Intellect.

Note
It is possible to enable sound notification about new events (see Setting up the Sweethearting report).

The goods scanning events are loaded into the table (**1**), ranging from the newest to the oldest. Each of the events is provided with the following summary information:

- **Date** - the date and time at which the goods were recognized and identified at the cash register;
- **POS terminal** - the POS-terminal on which the goods were recognized;
- **Cashier** - the full name of the cashier, who was supposed to make a scan;
- **Status** - the status of the event, which is determined by the operator of the Web Report System, working with the **Sweethearting** monitor.

In order to load events into the table, click the **Show new events** link in the upper-right part of the table (**2**). Similarly, you can optionally update the event table.

In order to clear the event table, click the **Clear events** link in the upper-left part of the table (**3**).

In order to view the details of an event and a video image, select the event in the list by clicking on the corresponding row in the table. After that, the following elements will become available in the right part of the screen:

1. The video of the event with the indication of the time when the event was recorded and the possibility of viewing in the archive mode (**4**).

   > **Note**
   > Working with video surveillance window in the archive mode is given in details in Intellect software package. Operator's guide.

2. The dropdown list for selecting the status of the event (**5**). By default, all events have the **Event not processed (by default)** status. Having examined the video, the operator of the Web Report System, working with the **Sweethearting** monitor, can manually assign the event one of the following statuses:
   a. Non-violation
   b. Possibly violation
   c. Minor violation detected
   d. Moderate violation detected
   e. Serious violation detected
3. The text field for operator comment (**6**). If necessary, the operator can leave his comment to the event (no more than five lines).
4. The field for program log output, unavailable for editing (**7**).
5. The **Save** button to save the event changes (new status and comment) (**8**).

The **Sweethearting** report is unavailable for export and can only be viewed in the monitoring mode. It is possible to export the video image from the event processing window, as described in the Exporting the video section.

8.2 Working with Time and Attendance reports

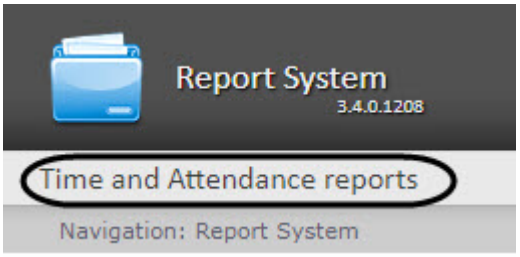
Working with Time and Attendance reports consists of three stages:

1. Selecting a type of report.
2. Creating a report.
3. Viewing a report.

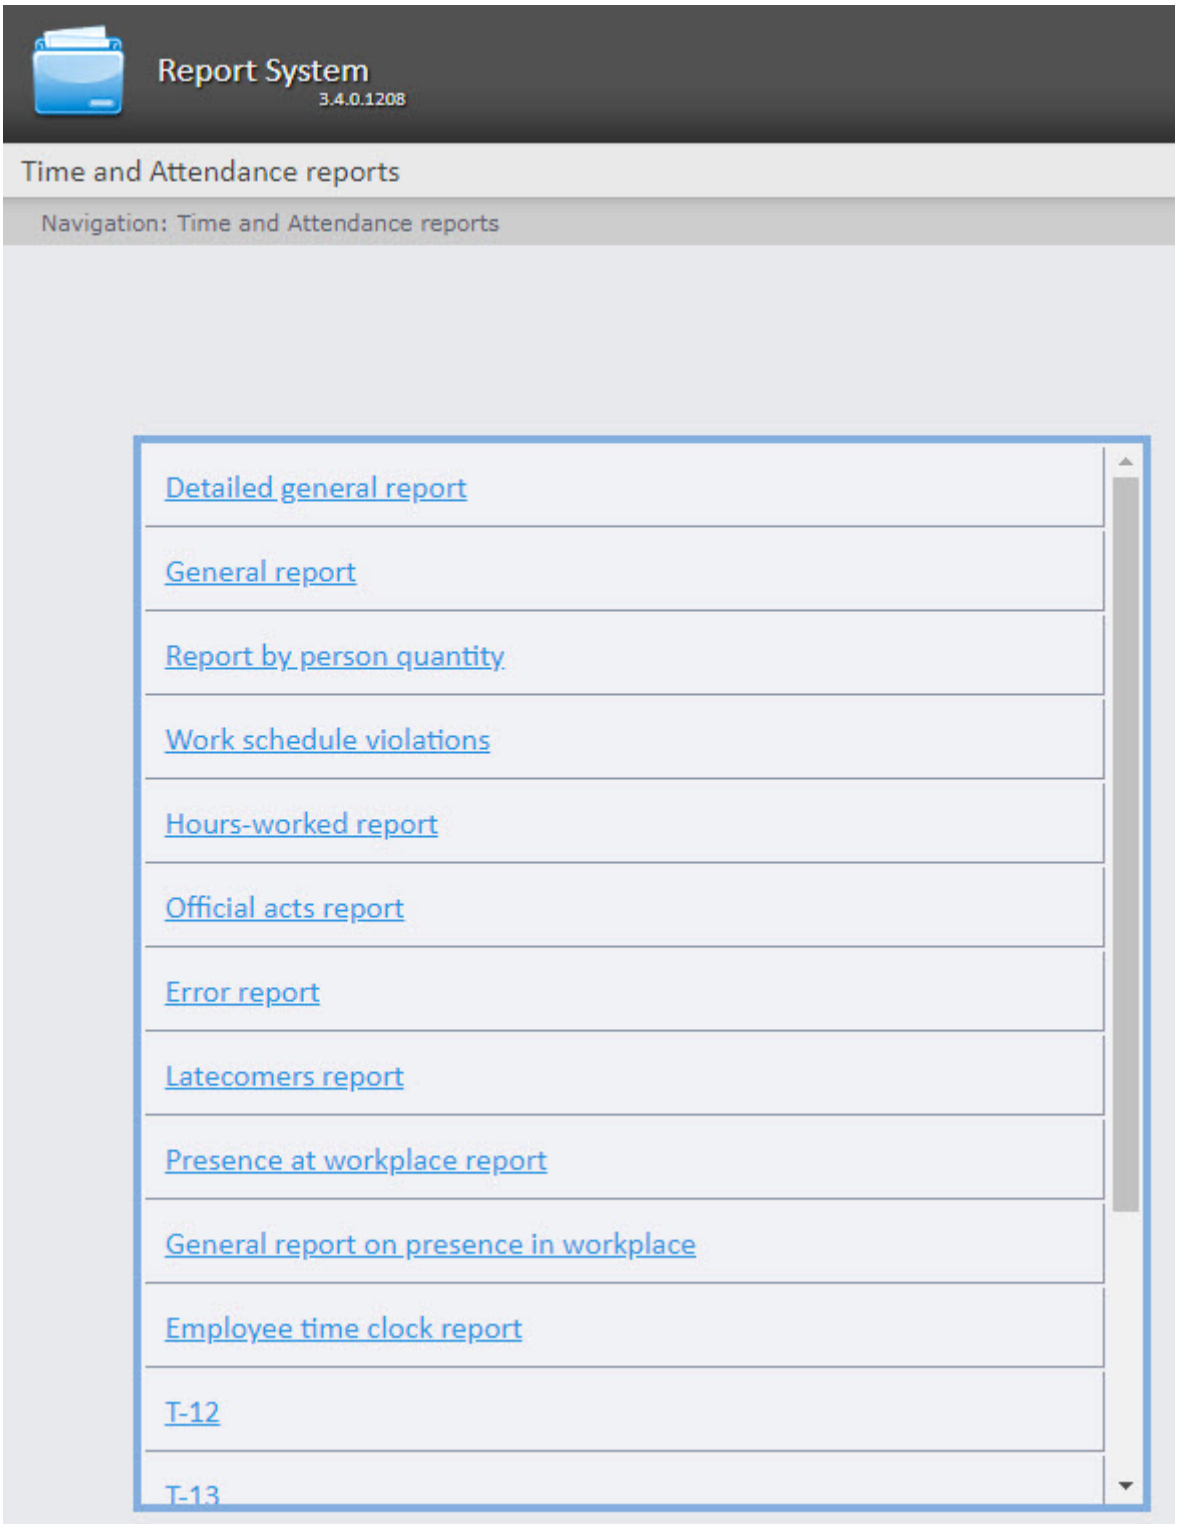
> **Attention!**
> It's required to configure user access to departments for working with Time and Attendance reports (see the Setting up the Time and Attendance reports section).

8.2.1 Selecting a type of Time and Attendance report

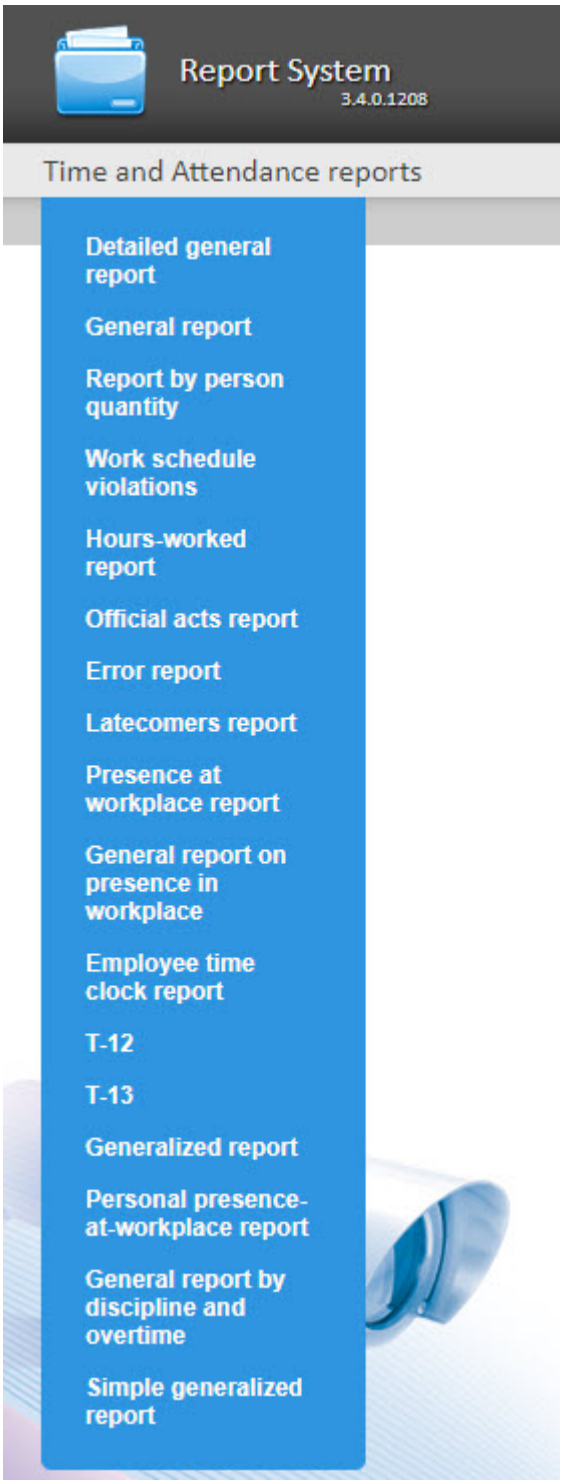
In order to select a type of Time and Attendance report click on **Time and Attendance reports** link in *Report System* menu.



As a result the list of available Time and Attendance reports is displayed. For switching to the required report click the corresponding link.



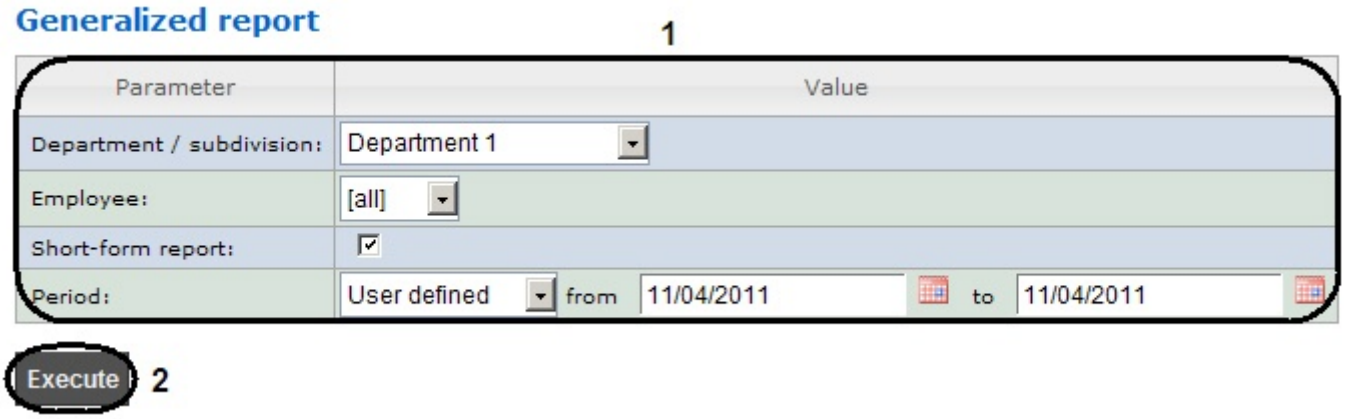
Note.
List of links for switching to Time and Attendance reports is available when hovering over the **Time and Attendance reports** link in the report menu.



8.2.2 Creating a Time and Attendance report

In order to create a Time and Attendance report, do the following:

Select a Time and Attendance report in one way (see Selecting a type of Time and Attendance report section).
Set required values to the parameters that are necessary for displaying the report of selected type (**1**).



> **Note.**
> The figure illustrates the parameters of a **Generalized report**.

Set of parameters depends on the type of Time and Attendance report. Description of parameters used for creating reports is given in the table.

Parameter	Description	Usedinreports
Area: Region 1	Used for selecting the area by which data is displayed in the report	• Detailed general report • General report • Presence at workplace report • Personal presence at workplace report • Report by person quantity
Period: Current date and time	Used for setting the period by which the report is displayed	Used in all reports
Show entrances/exits:	When the checkbox is checked then entrances/exits points are displayed in the report	• Presence at workplace report • Personal presence at workplace report
Only working area:	When the checkbox is checked then the data only by working area is displayed in the report	• Presence at workplace report • Personal presence at workplace report
Short-form report:	When the checkbox is checked then some report fields are hidden.	• Detailed general report • General report • Personal presence at workplace report
Add a Comment column:	When the checkbox is set, the Comment column will be displayed in the report, which is used to manually add a comment to the printed report.	• General report

Parameter	Description	Usedinreports
	Used for selecting the work schedule of employees whose information is to be displayed in the report. You can select one of the available schedule or all the work schedules at once.	• Detailed general report • General report
	Used for selecting the department or employee whose information is to be displayed in the report. You can select the whole department or several employees of the corresponding department.	• Work schedule violations • Hours-worked report • Official acts report • Error report • Latecomers report • Presence at workplace report • Employee time clock report • General report by discipline and overtime • Simple generalized report • General report • Report by person quantity
	Used for selecting the department or subdivision which information is to be displayed in the report. You can select only the whole department/subdivision.	• Generalized report • T-12 • T-13
	Used to select an employee whose information is to be displayed in the report from a previously selected department/subdivision. You can select one employee or all employees of the corresponding department/ subdivision at once.	• Generalized report • Personal presence at workplace report
	When the checkbox is set, then the additional information is displayed in the employee report.	• Employee time clock report
	When the checkbox is set, then only those employees who were not present at their workplace will be displayed in the report.	• Hours-worked report
	Used to set the exact timestamp (hours, minutes) the infomation of which is to be displayed in the report.	• Report by person quantity
The parameters available when the extended display of the report is enabled (see Enabling the extended display of reports)		
	Used to filter the data by the employee's personnel number and display this information in the report.	• Presence at workplace report • Total report on the presence at the workplace
	Used to filter the data by the agreement number and display this information in the report.	
	Used to filter the data by the employee's name and display this information in the report.	
	Used to filter the data by the employee's surname and display this information in the report.	

Parameter	Description	Usedinreports
Patronymic:	Used to filter the data by the employee's patronymic name and display this information in the report.	
Position: [all]	Used to filter the data by the employee's job position and display this information in the report.	
Activity area: [all]	Used to filter the data by the employee's job activity area and display this information in the report.	
Category: [all]	Used to filter the data by the employee's category and display this information in the report.	
Speciality: [all]	Used to filter the data by the employee's speciality and display this information in the report.	
Time of coming to territory : from 00:00:00 to 23:59:59	Used to filter the data by the employee's time of arrival and display this information in the report.	
Time of leaving territory : from 00:00:00 to 23:59:59	Used to filter the data by the employee's time of leaving and display this information in the report.	
Period of presence on territory : More 00:00:00	Used to filter the data by the time employee's spent on site and display this information in the report.	
Group by department:	When the checkbox is set, then the information is grouped by department.	
Sum up each employee's time :	When the checkbox is set, then the total time of all employees' presence on site is displayed in the report.	

Click **Execute** (**2**).

As a result a report is created and displayed (see Viewing a Time and Attendance report).

8.2.3 Viewing a Time and Attendance report

8.2.3.1 Time and Attendance report toolbar

The toolbar on the top of a page is used for report navigating, scaling the displayed page and Time and Attendance report exporting.

In order to switch to the previous and next report page click and correspondingly (**1**). In order to go back to the first report page click . In order to go to the last report page click .

Intellect Web Report System allows exporting the created Time and Attendance report to computer in the following formats:

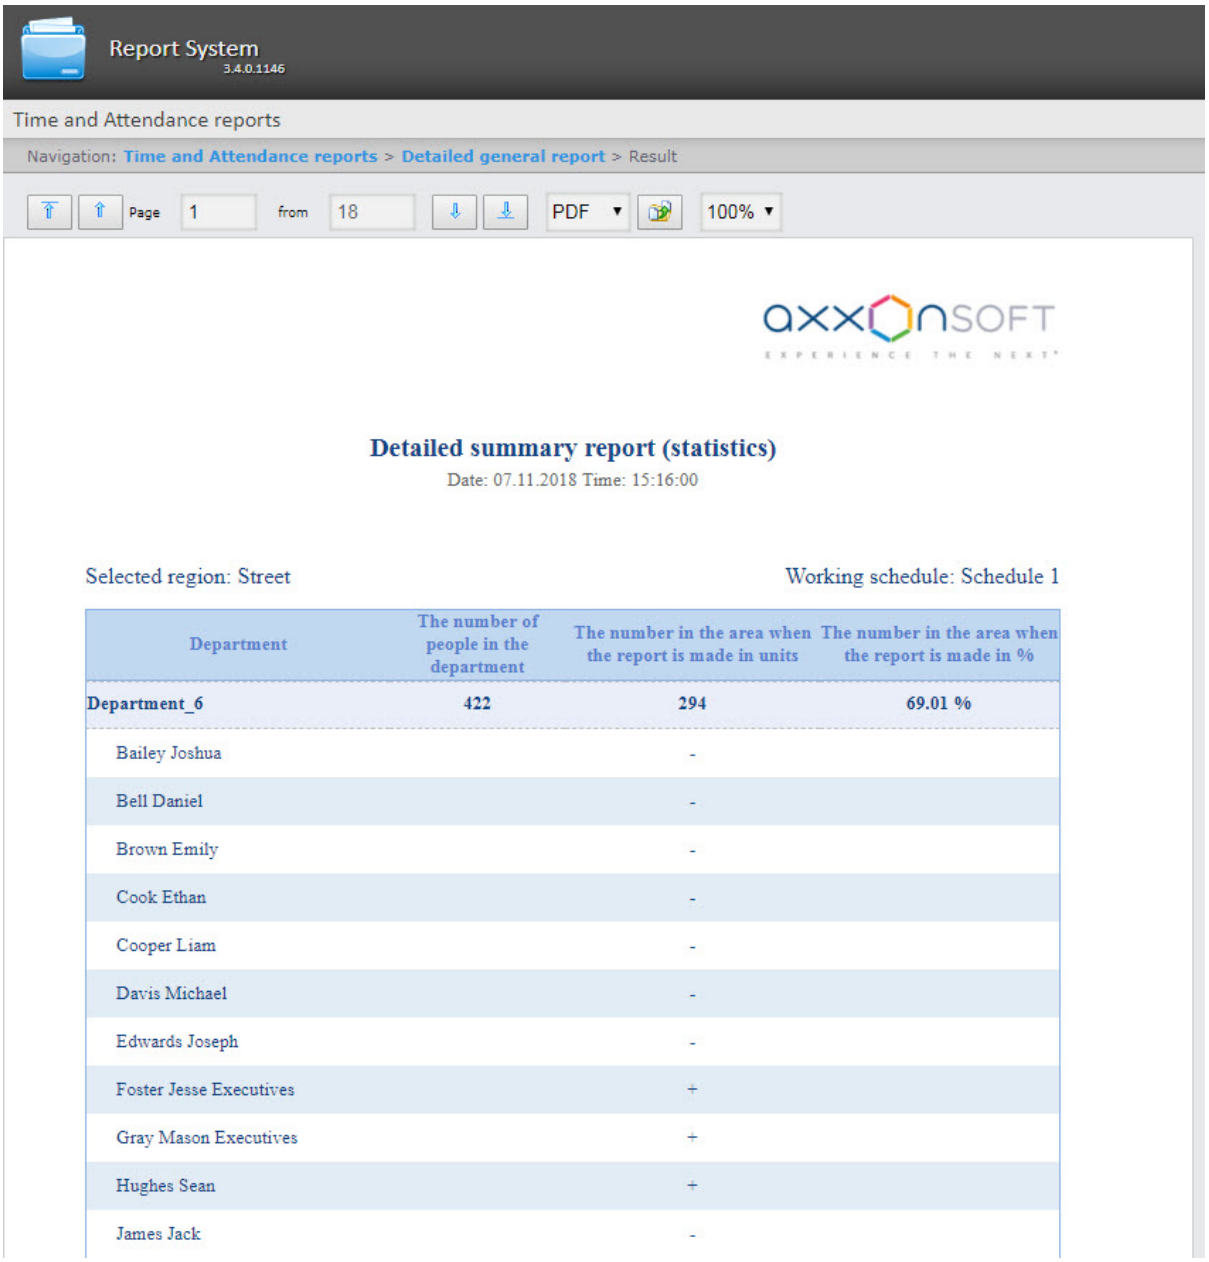
- PDF;
- RTF;
- HTML;
- Excel;
- CSV;
- Text.

For this select a format in which the report is exported and click (**2**).

Zooming in/out the displayed page is performed through the choosing the required scale in the list (**3**).

8.2.3.2 Detailed general report

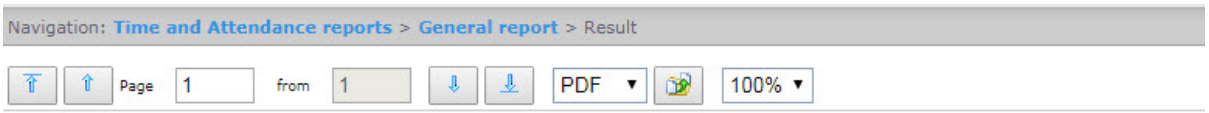
A **Detailed general report** contains the information about the total number of people in the department, with the specified work schedule, the number of department's employees in the selected region, and the percentage of the employees present at the workplace at the specified time period.



Note.
The employees that are present in the area when the report is made are marked with "+", those who are absent are marked with "-".

8.2.3.3 General report

A **General report** contains the information about the total number of people in the departments, with the specified work schedule, the number of department's employees in the selected region, and the percentage of the employees present at the workplace at the specified time period.



Summary report (statistics)

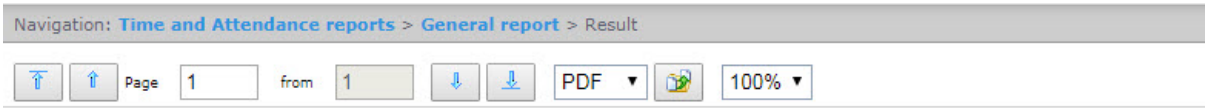
Date: 07.11.2018 Time: 12:37:06

Selected region: Street

Working schedule: Schedule 1

#	Department	The number of people in the department	The number in the area when the report is made in units	The number in the area when the report is made in %
1	Department_3	6	1	16.67 %
2	Department_4	7	0	0.00 %
3	Department_6	427	95	22.25 %
4	Department_8	0	0	-
Total:		**440**	**96**	**21.82 %**

The short General report has the following format:



Summary report (statistics)

Date: 07.11.2018 Time: 12:35:26

Selected region: Street

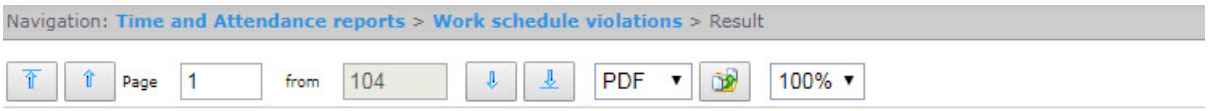
Working schedule: Schedule 1

#	Department	The number of people in the department	The number in the area when the report is made in units	The number in the area when the report is made in %
1	Department_3	6	1	16.67 %
2	Department_6	427	95	22.25 %
Total:		**433**	**96**	**22.17 %**

8.2.3.4 Report by person quantity

8.2.3.5 Work schedule violations

A **Work schedule violations** report contains the information about the employees that violated the work schedule in the specified time period, the violation type and its duration.



Violating working regulations

Date: from 5 July to 5 July

Department: Department_6

Bailey Joshua — Working schedule:

Date; hours to scheduled completion	Actual date and time	Violation type	Duration	Code
5 July 09:00:00	5 July 17:41	Leaving earlier	00:18:10	

Total by employee	Amount	Duration
Coming late	0	00:00:00
Time of absence	0	00:00:00
Leaving earlier	1	00:18:10
Absence	0	00:00:00
Underworking	0	00:00:00

Bell Daniel — Working schedule:

Date; hours to scheduled completion	Actual date and time	Violation type	Duration	Code
5 July 09:00:00	5 July 12:47	Leaving earlier	05:12:11	

Total by employee	Amount	Duration
Coming late	0	00:00:00
Time of absence	0	00:00:00
Leaving earlier	1	05:12:11
Absence	0	00:00:00
Underworking	0	00:00:00

Total by employee	Amount	Duration
Coming late	0	00:00:00
Time of absence	0	00:00:00
Leaving earlier	0	00:00:00
Absence	1	09:00:00
Underworking	0	00:00:00

Total by department	Amount	Duration
Coming late	4	11:12:18
Time of absence	2	00:14:40
Leaving earlier	68	118:15:43
Absence	344	3096:00:00
Underworking	0	00:00:00

Total by report	Amount	Duration
Coming late	4	11:12:18
Time of absence	2	00:14:40
Leaving earlier	68	118:15:43
Absence	344	3096:00:00
Underworking	0	00:00:00

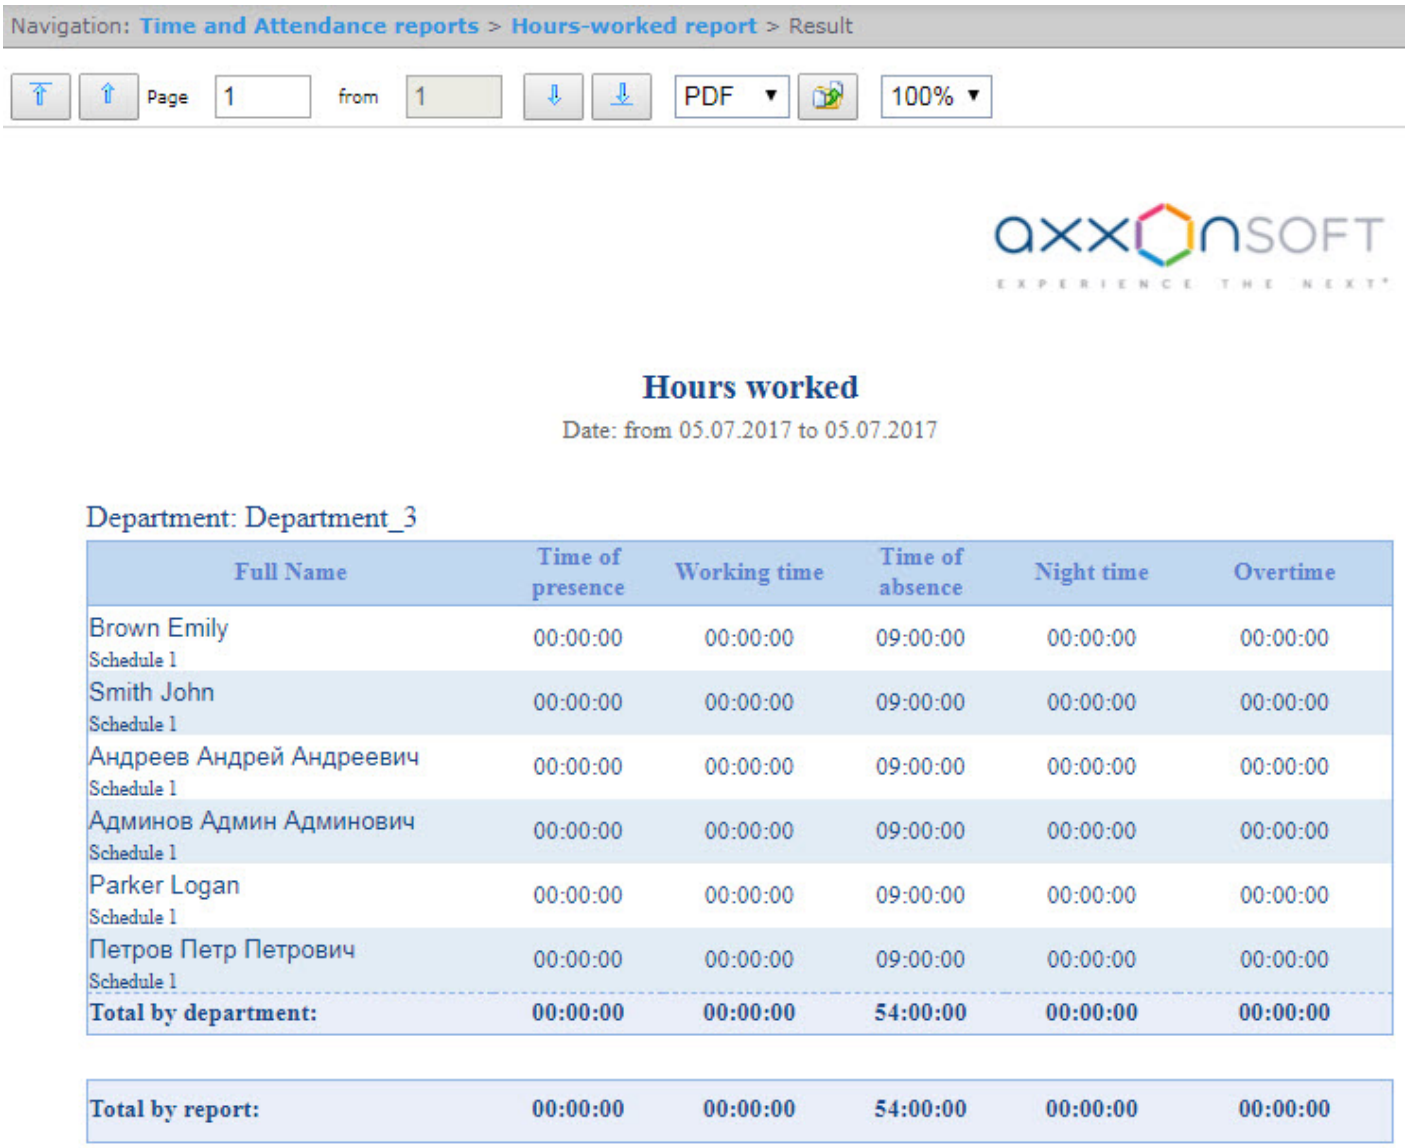
Report fields are described in the table.

Field name	Description
Date; hours to scheduled completion	Planned duration of a workday for the specified date
Actual date and time	Date and time when violation was registered
Violation type	Type of registered violation
Duration	Violation duration
Code	Violation code

In the report there are separate tables with information about total amount of violations by employee, department and report as a whole.

8.2.3.6 Hours-worked report

An **Hours-worked report** is a table that contains the information about the working hours of the department staff in the specified time period detailed by employees.

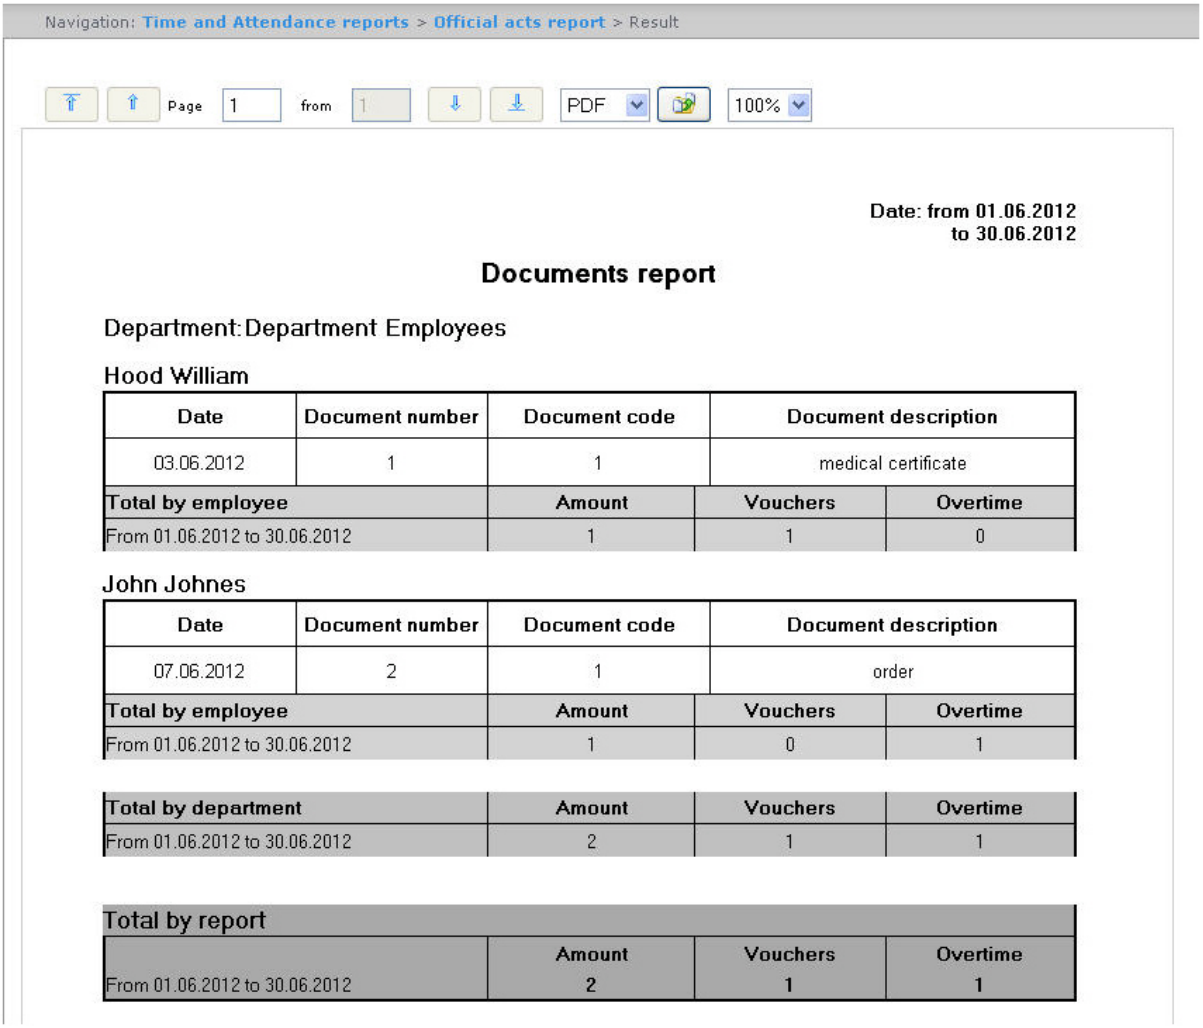


Report fields are described in the table.

Field name	Description
Full name	Full name of an employee
Time of presence	Time that was spent in the workplace. If time of presence is more than planned working hours for specified period then the field is marked red
Working time	Time that was spent in the workplace according to the work plan (schedule)
Time of absence	Difference between the planned work hours and time of presence in the workplace
Night time	Time that was worked at night
Overtime	Time that was worked overtime
The **Total by department** line displays the sum values by each department's employee.	
The **Total by report** line displays the sum values by each department.	

8.2.3.7 Official acts report

A **Official acts report** contains the information about *the covering* and overtime documents that were drawn by employees in the specified time period.



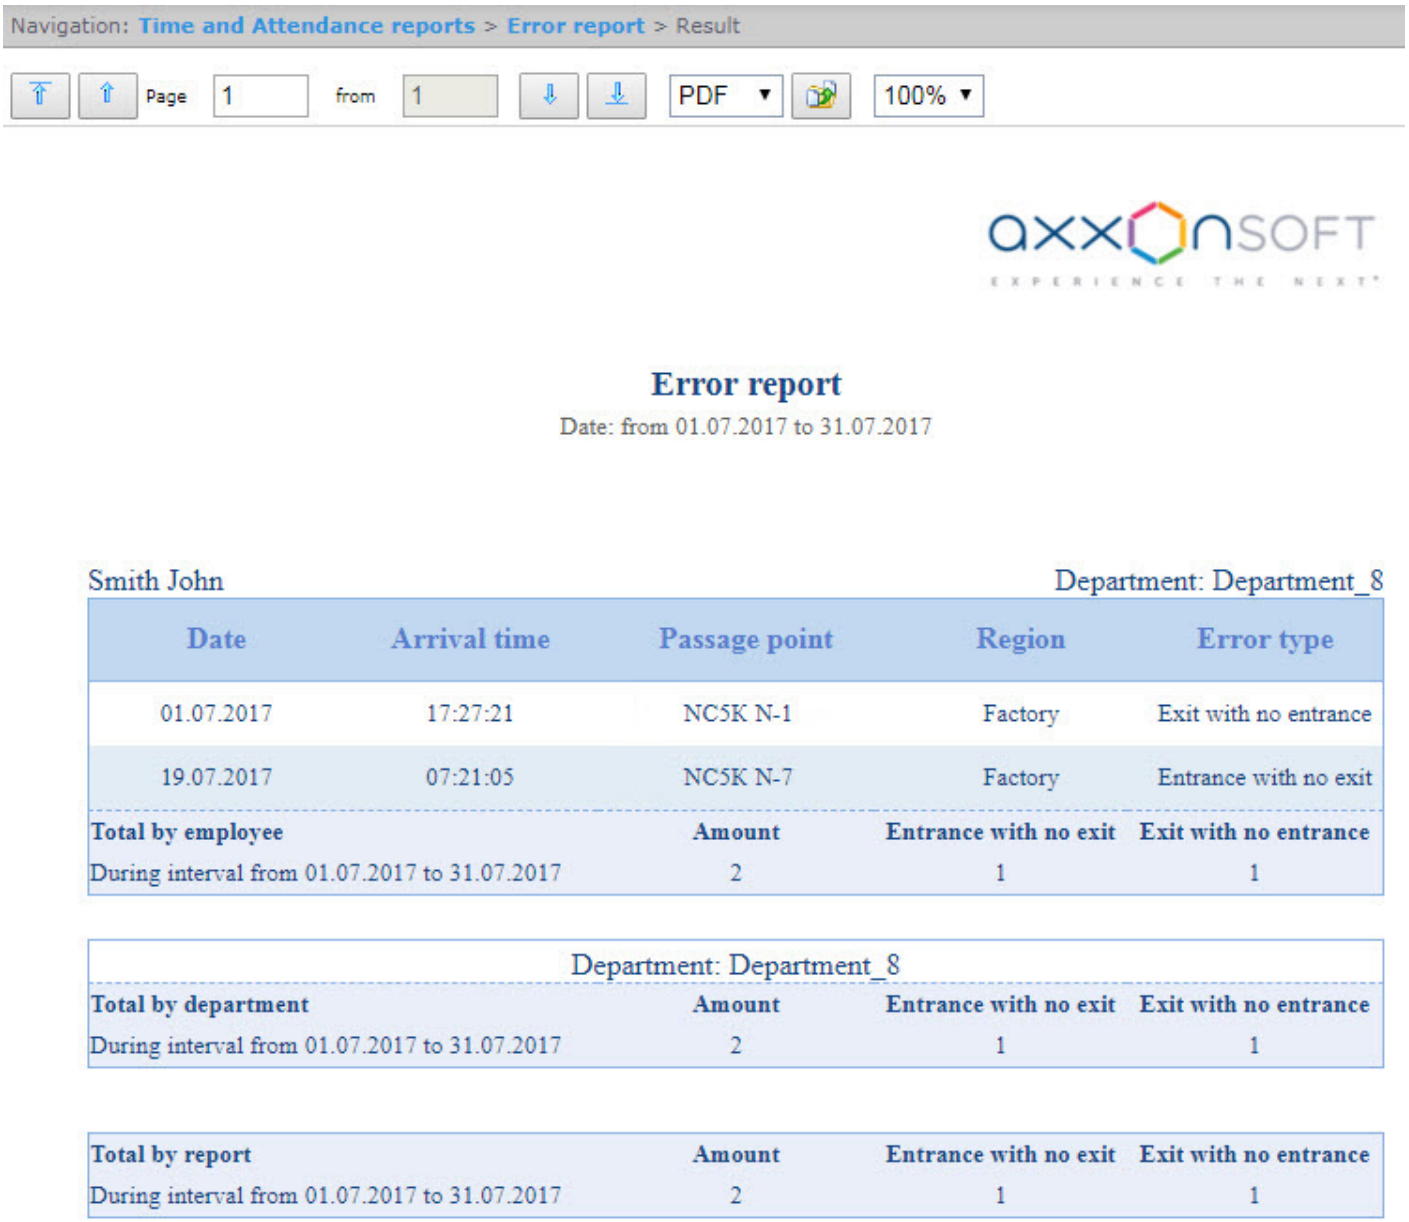
Report fields are described in the table.

Field name	Description
Date	Date of document creation
Document number	Document number given in Time and Attendance program module
Document code	Document code given in Time and Attendance program module
Document description	Document name

In the report there are separate tables with information about total amount of documents by employee, department and report as a whole.

8.2.3.8 Error report

An **Error report** contains the information about the employees' incorrect passes/exits to(from) the region.



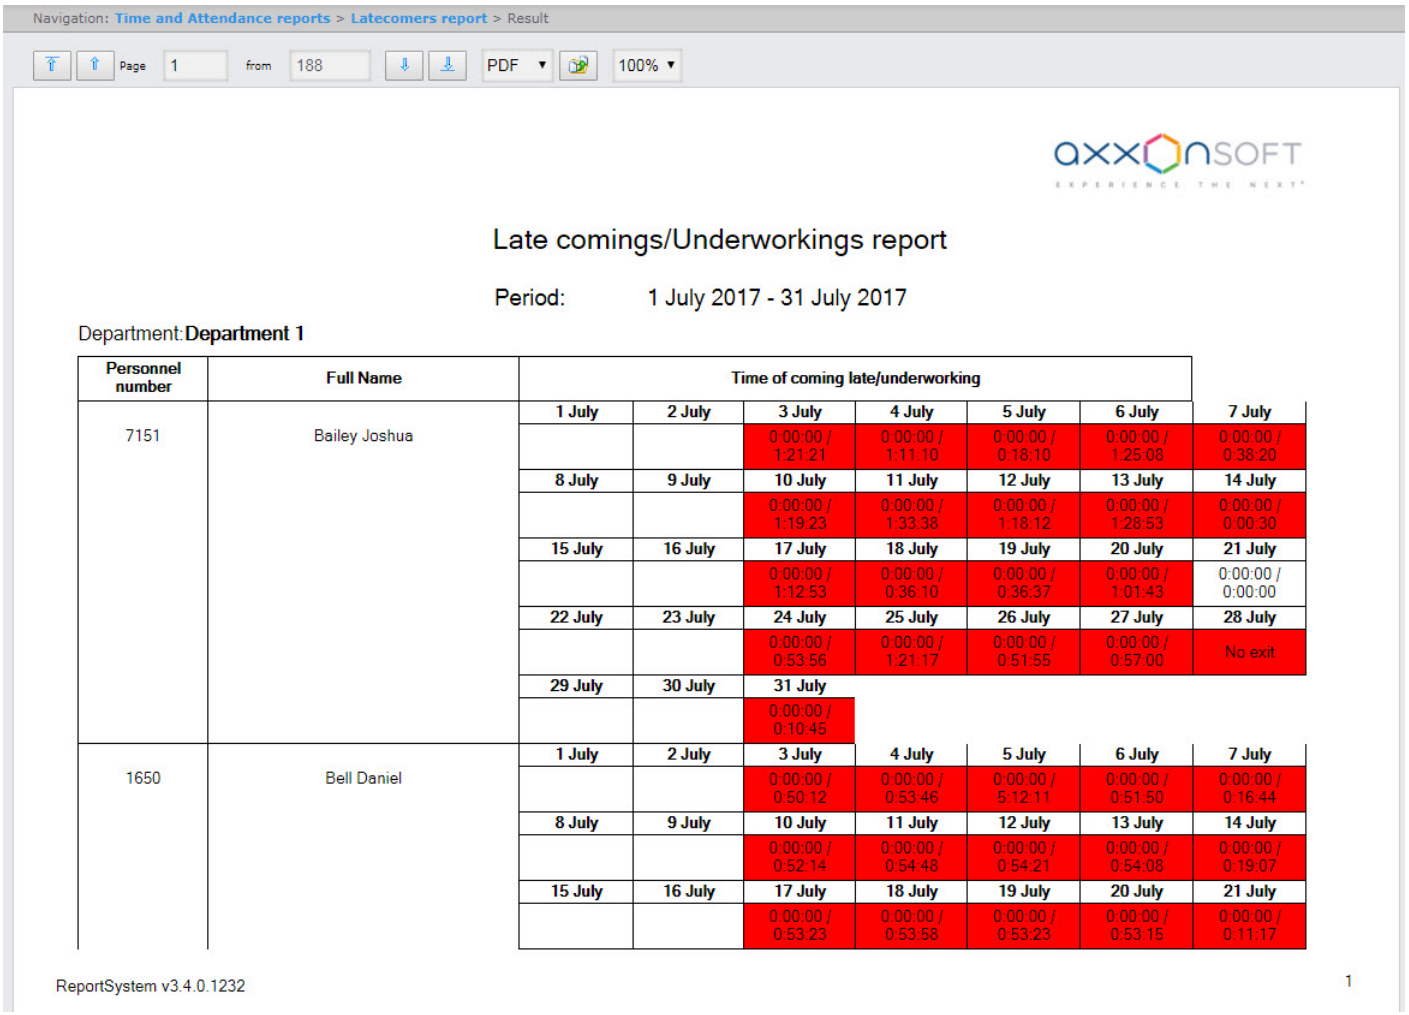
Report fields are described in the table.

Field name	Description
Date	Date when an error was registered
Arrival time	Time when there was a passage to the region that caused an error
Passage point	Name of a passage point
Region	Name of a region where an error was registered
Error type	Type of a registered error

In the report there are separate tables with information about total amount of errors by department and report as a whole.

8.2.3.9 Latecomers report

A **Latecomers report** contains the information about how late an employee came and how much time he underworks for every day of a specified period.



Navigation: Time and Attendance reports > Latecomers report > Result

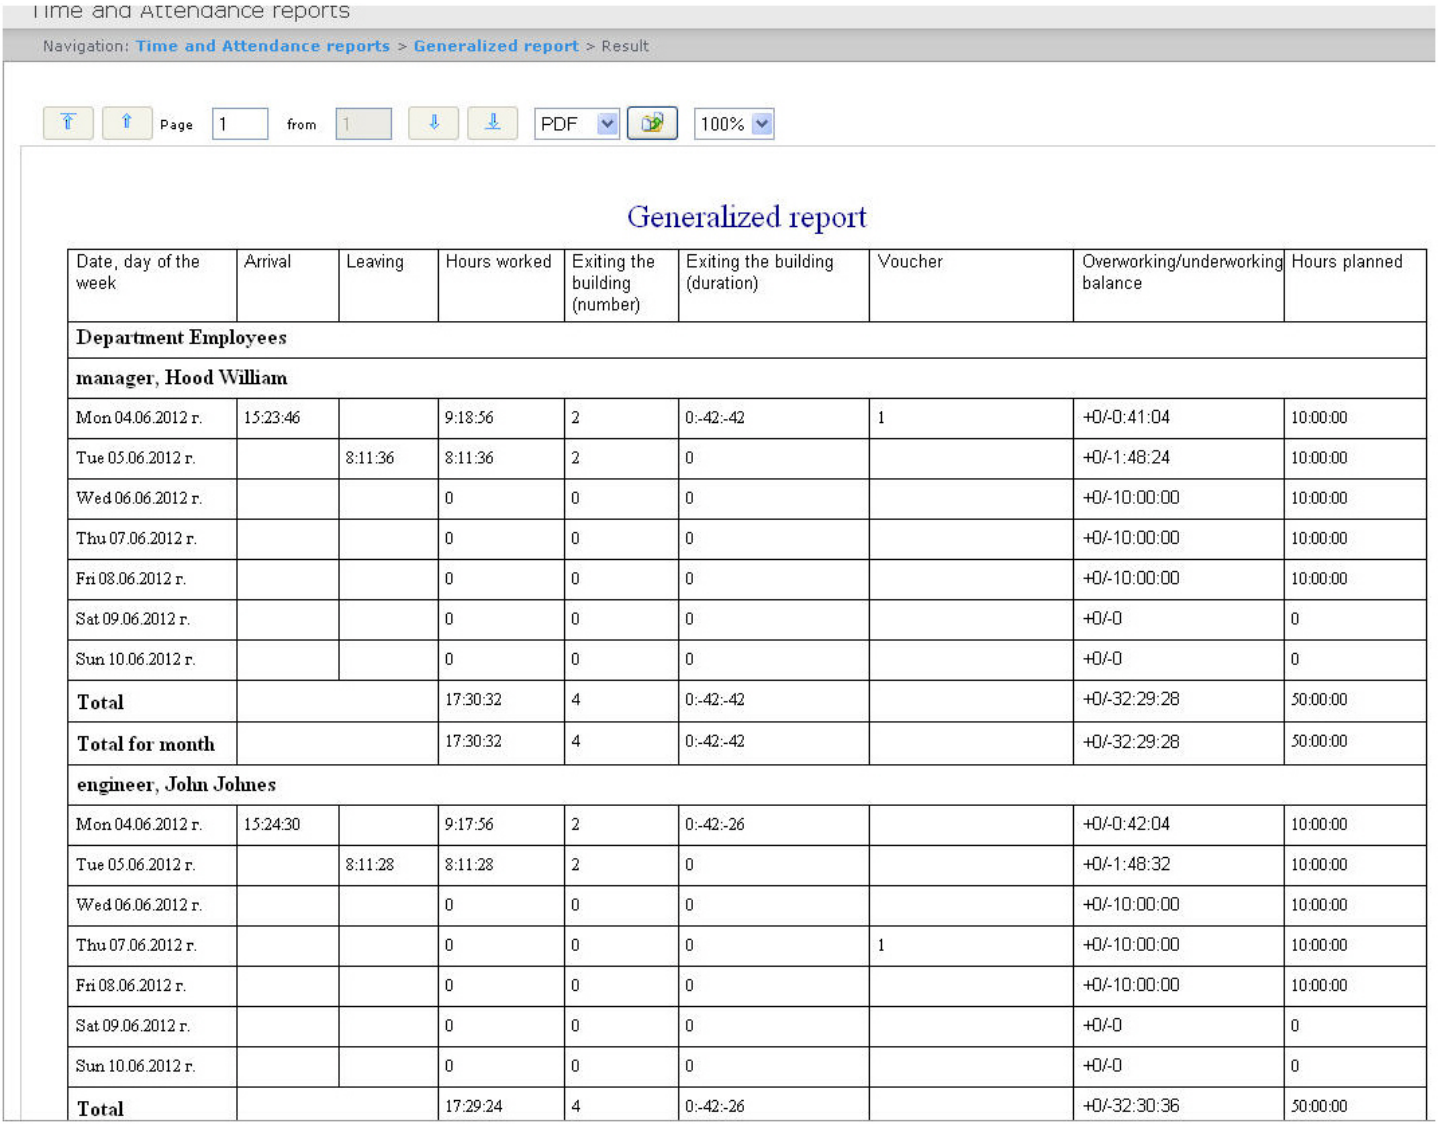
Information on salary accounting by expense kinds is given in the 7-9 columns of **T-13** report.

Total by worked time for a month is given in the 8-13 columns of **T-12** report.

Total by employee's absence from work is given in the 14-16 columns of **T-12** report and in the 10-13 columns of **T-13** report.

8.2.3.14 Generalized report

Generalized report is a table that contains information on carrying out the workday order by employees for every day of selected period.



Time and Attendance reports

Total			17:29:24	4	0:-42:-26		+0/-32:30:36	50:00:00

Report fields are described in the table.

Field name	Description
Date, day of the week	Date, day of the week
Arrival	Time of arrival
Leaving	Time of leaving
Hours worked	Hours worked by employee
Leaving the building (number)	Number of leavings out of the building (region)
Leaving the building (duration)	Time when the employee is absent in the region
Explanation	Explanations made by employee
Overworking/underworking balance	Time of overwork/underwork

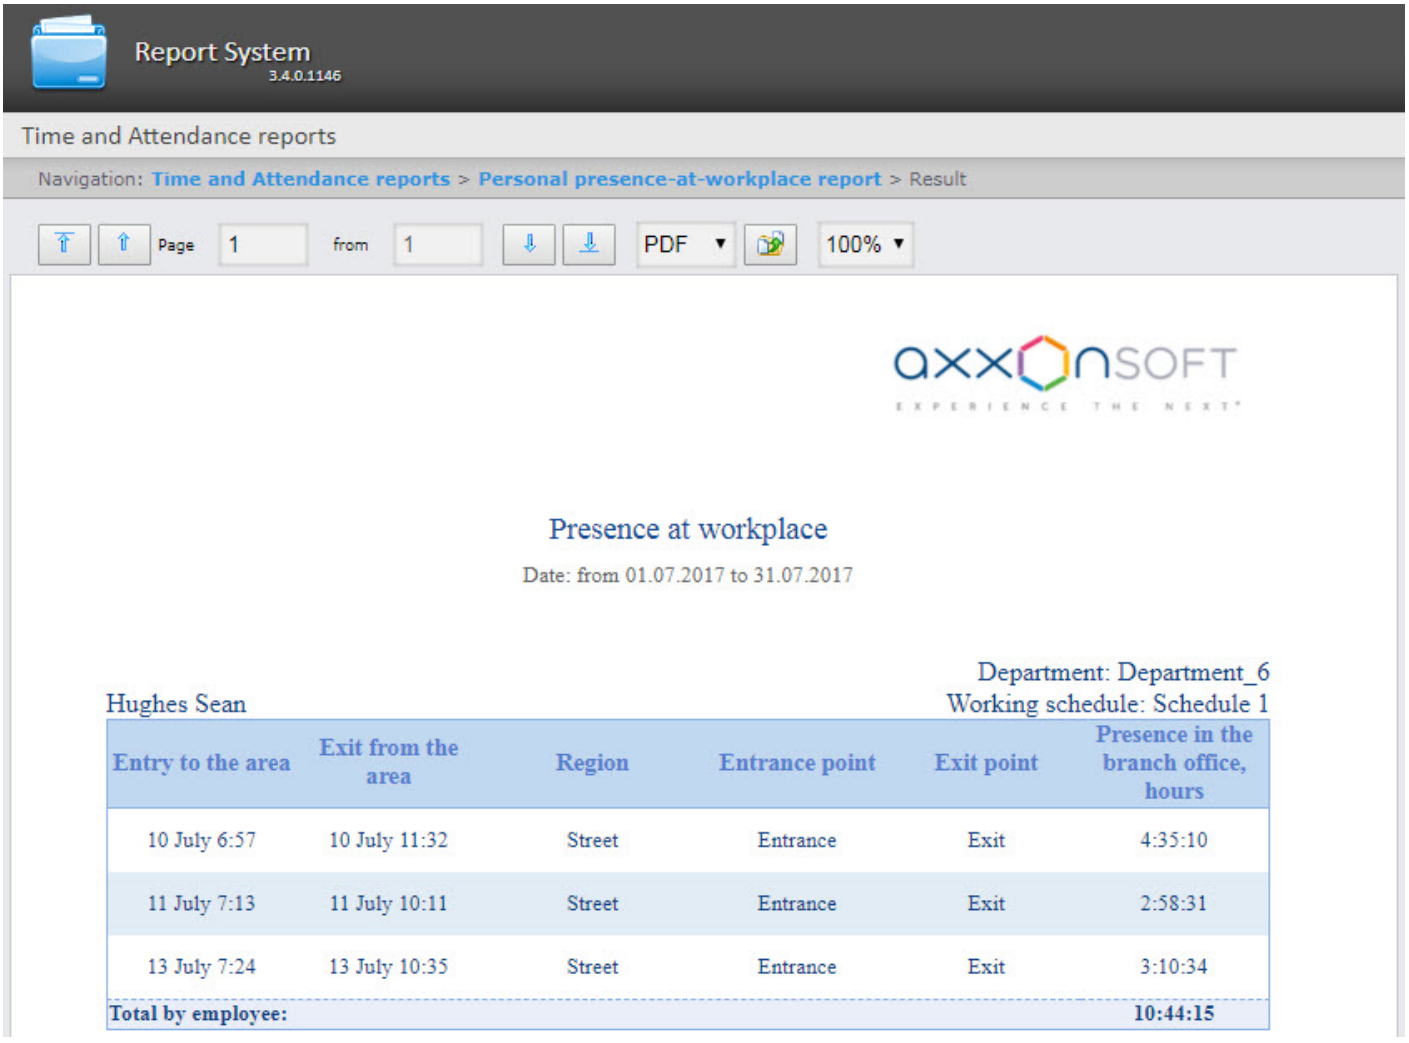
Field name	Description
Hours planned	Planned workday duration

Note.
Note. Short form of the report contains the following fields:

1. Date, day of the week.
2. Hours worked.
3. Overworking/underworking balance.
4. Hours planned.

8.2.3.15 Personal presence at workplace report

The **Personal presence at workplace report** contains the information about the times when the employee entered and left the selected region during the day, and how much time the employee spent in the selected region during the specified period.



Report fields are described in the table.

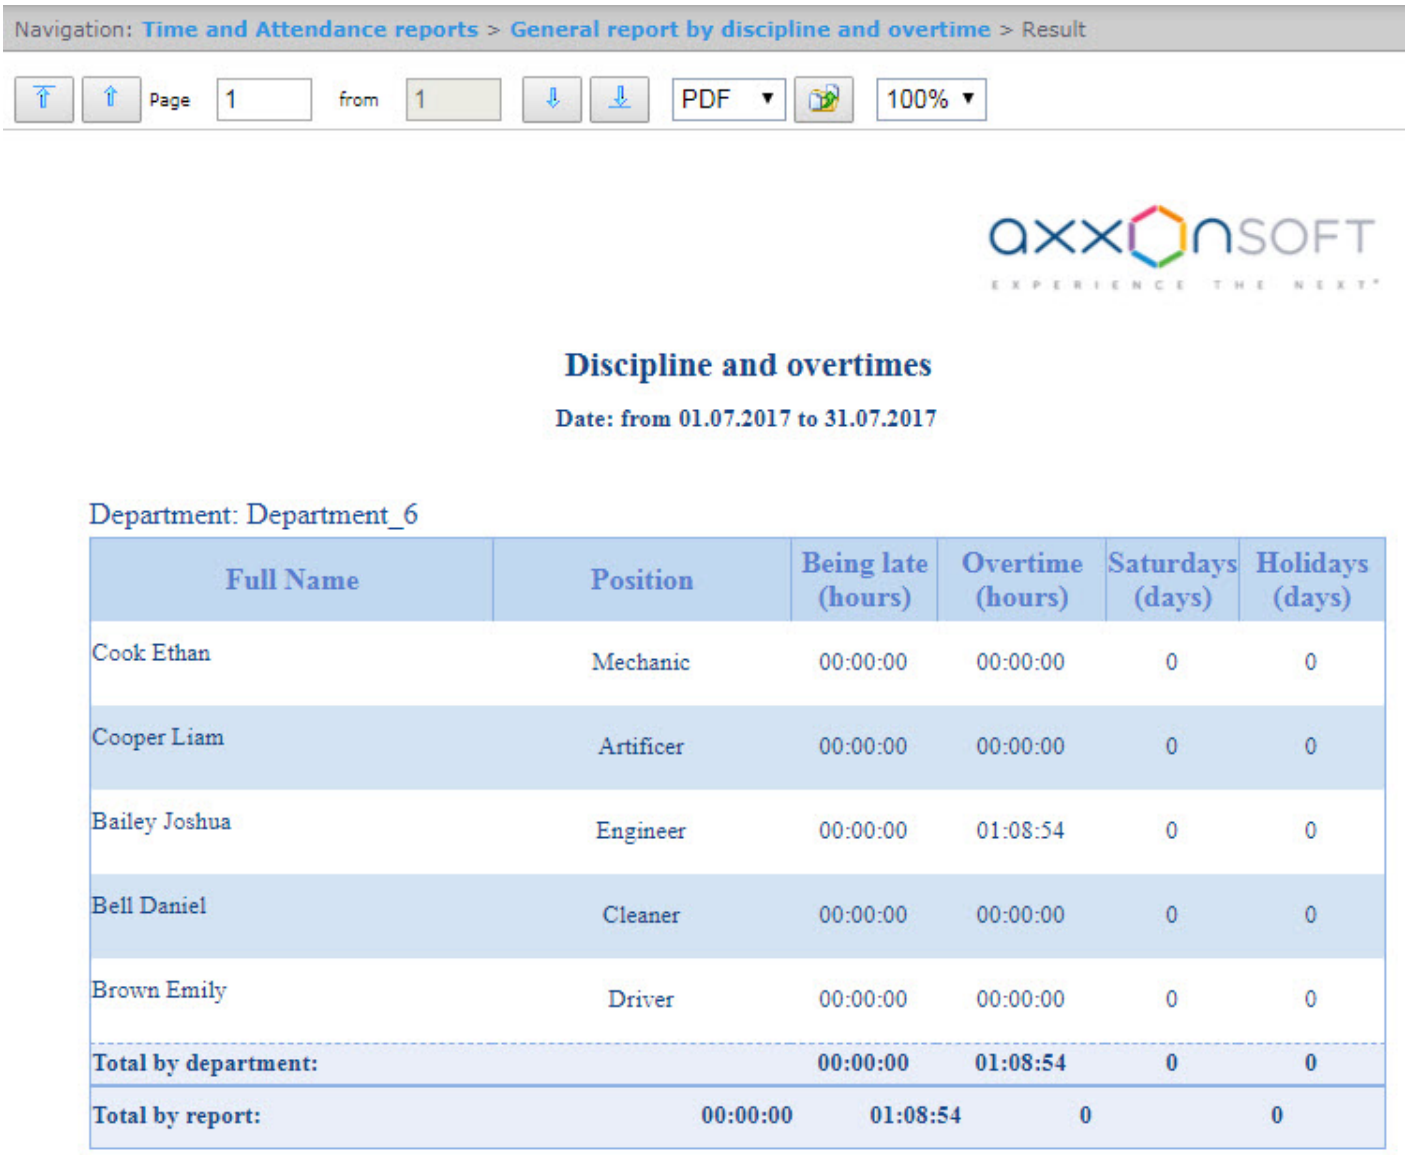
Field name	Description
Entry to the area	Date and time of an employee's entrance to the region

Field name	Description
Exit from the area	Date and time an employee's exit from the region
Region	Name of the visited region
Entrance point	Name of an entrance point to the region
Exit point	Name of an exit point from the region
Presence in the branch office, hours	The time the employee spent in the selected region
The **Total by employee** line displays the total time spent by the employee in the region for the selected time period.	

Note.
In the short form of the report the information about entrances and exits is not displayed. Only the total time of employee's presence in the selected regions is displayed.

8.2.3.16 General report by discipline and overtime

General report by discipline and overtime is a table that contains information on overtimes and beings late, about working of employee on weekend and holidays during the specified time period.

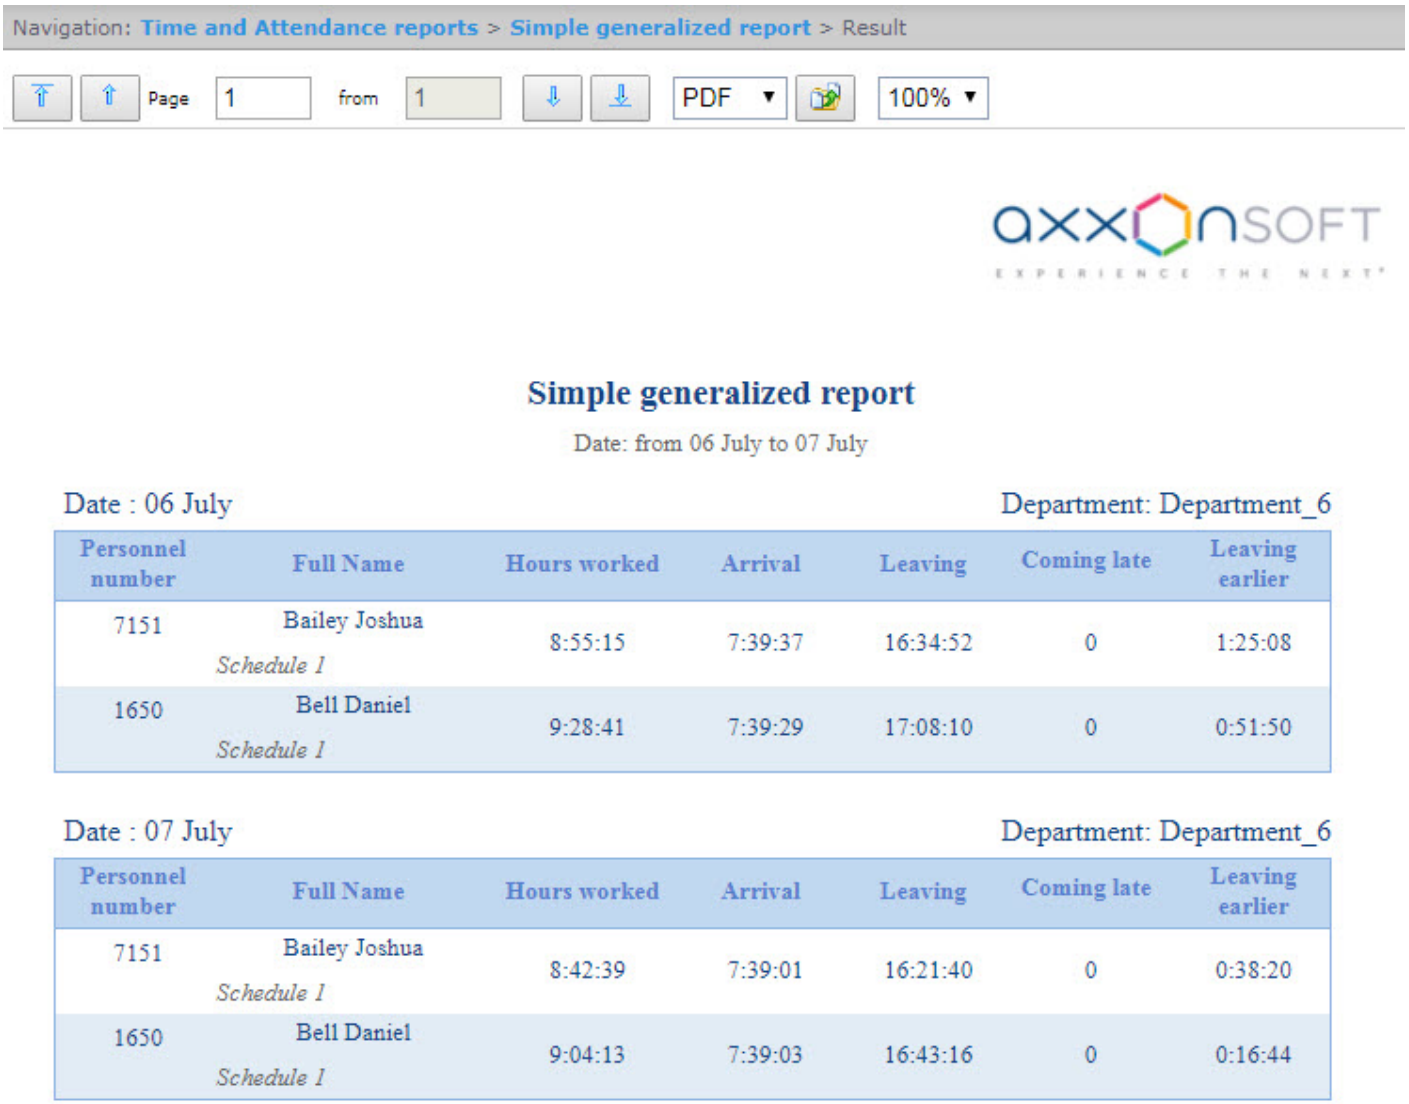


The report fields are described in the following table.

Field name	Description
Full name	Employee full name
Position	Employee position
Being late (hours)	General time if being late during the specified period (in hours)
Overtime (hours)	General time of overtime during the specified period (in hours)
Saturdays (days)	Number of worked weekend days
Holidays (days)	Number of worked holidays
The **Total by department** line displays the total sum by each employee of the department.	
The **Total by report** line displays the total sum by each department.	

8.2.3.17 Simple generalized report

Simple generalized report is a table that contains information about worked hours, time of employee arrival and leaving, and information about being late and underwork for each day of the specified period.



Report fields are described in the table.

Field name	Description
Personnel number	Employee personnel number
Full name	Employee full name
Hours worked	Hours worked by employee
Arrival	Time of arrival
Leaving	Time of leaving
Coming late	Time of coming late

Field name	Description
Leaving earlier	Time on which employee left work earlier

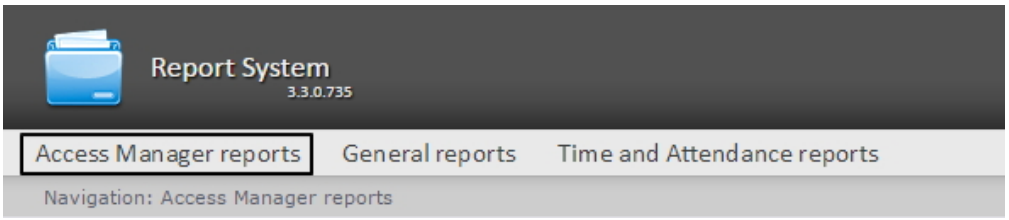
8.3 Working with Access Manager reports

Working with the **Access Manager** reports consists of the following stages:

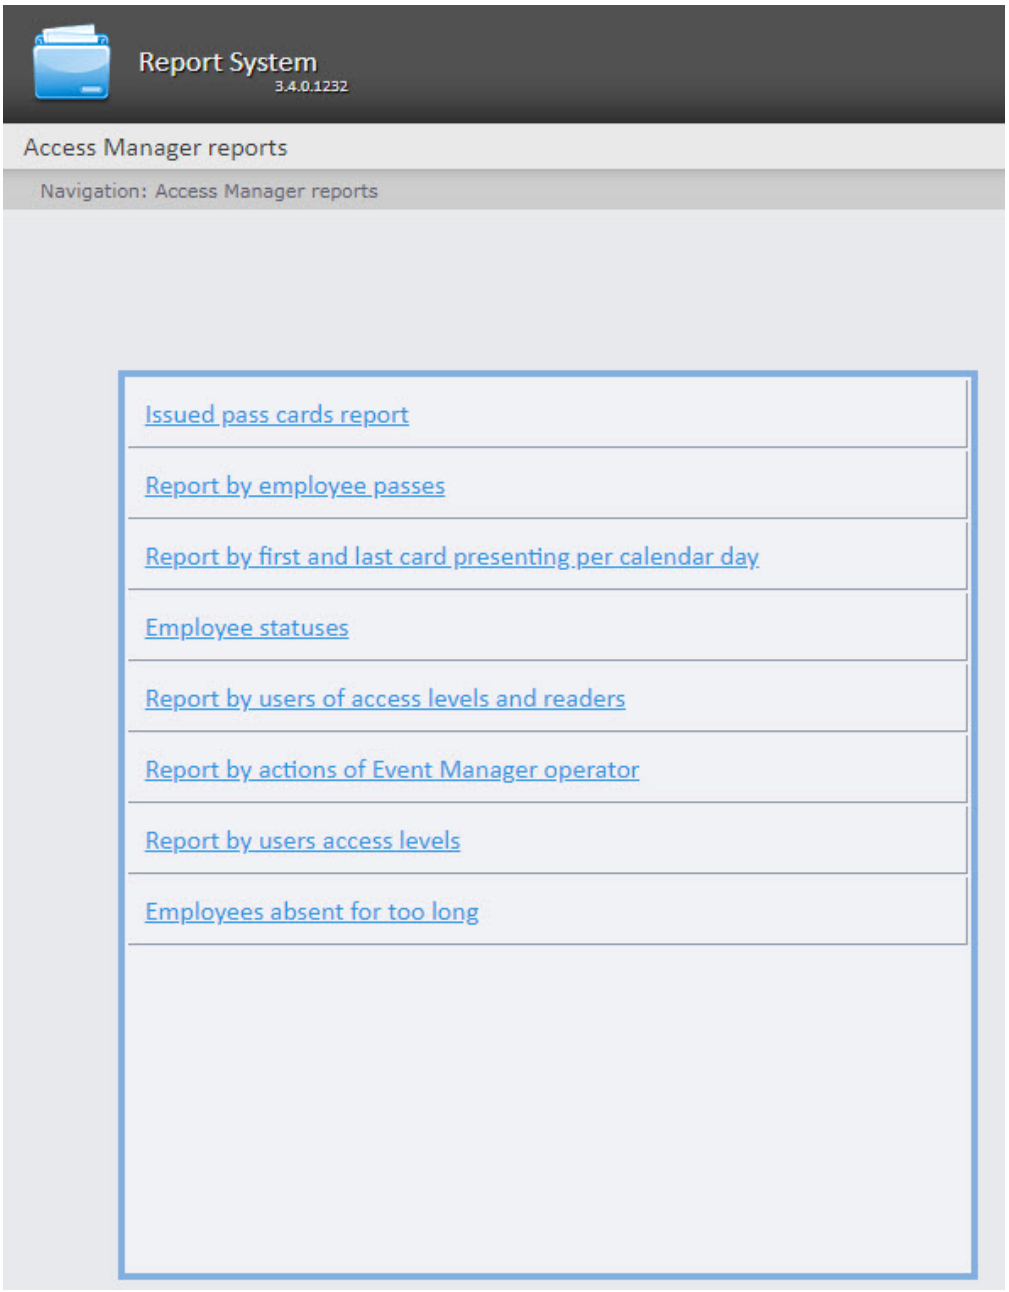
1. Selecting the report type.
2. Creating a report.

8.3.1 Selecting the type of Access Manager report

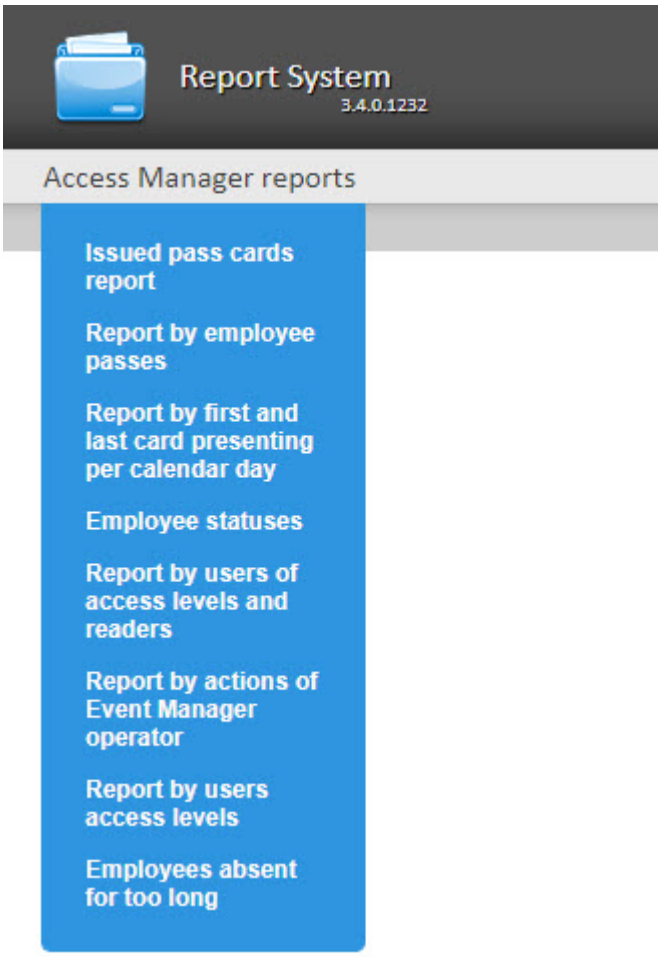
To select the **Access Manager** report type, click the **Access Manager reports** link in the *Intellect Web Report System* menu.



As a result the list of available **Access Manager** reports is displayed. To select the required report, click the corresponding link.



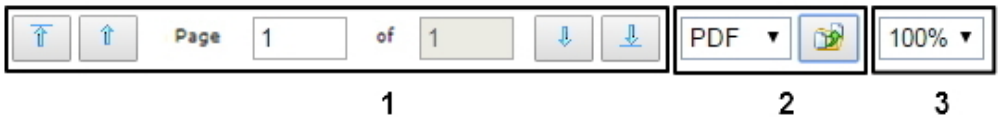
The list of the **Access Manager** reports is also displayed when hovering over the **Access Manager reports** link in the report menu.



8.3.2 Creating the Access Manager report

8.3.2.1 Access Manager report toolbar

The toolbar displayed at the page top is used for the report navigation, scaling the report page and exporting the **Access Manager** report.



To switch to the previous and next report page click and correspondingly (**1**). To go back to the first report page click . To go further to the last report page click .

The *Intellect Web Report System* enables exporting the **Access Manager** reports in the following formats:

- PDF;
- RTF;
- HTML;
- Excel;
- CSV;
- Text.

To do this, select the necessary format on the toolbar and click (**2**).

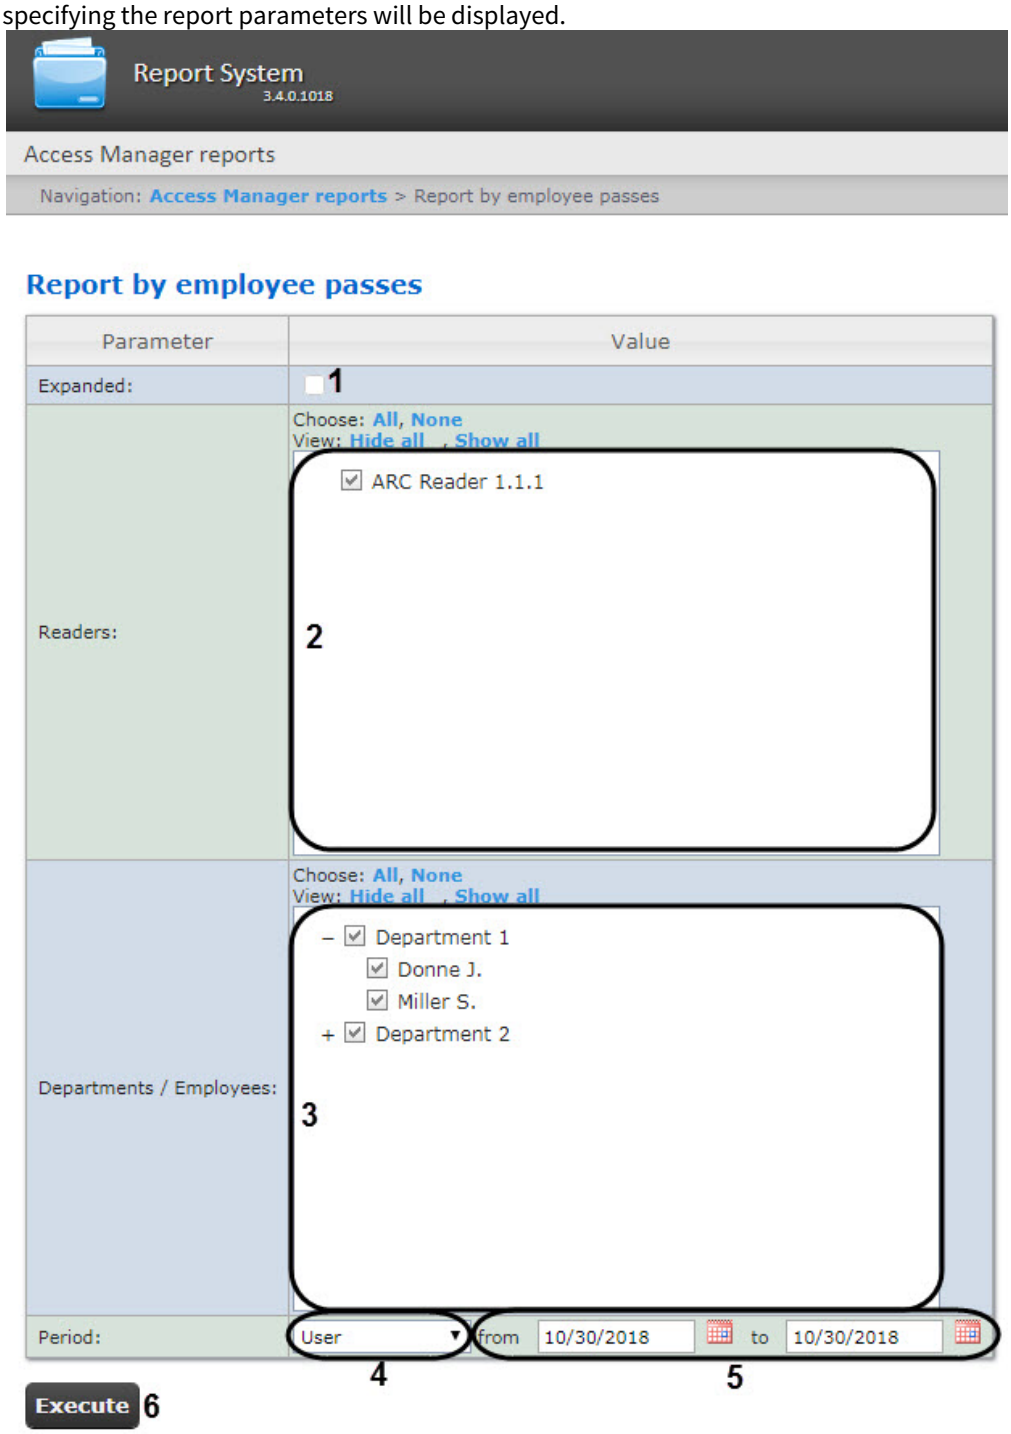
To zoom in/zoom out the report page, choose the required scale in the drop-down list (**3**).

8.3.2.2 Report by employee passes

The **Report by employee passes** displays all interactions between the selected employee and the selected passage points. The report allows you to track the movement of the selected employee within a specified zone.

To create the **Report by employee passes**, do the following:

1. Select the **Report by employee passes** (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



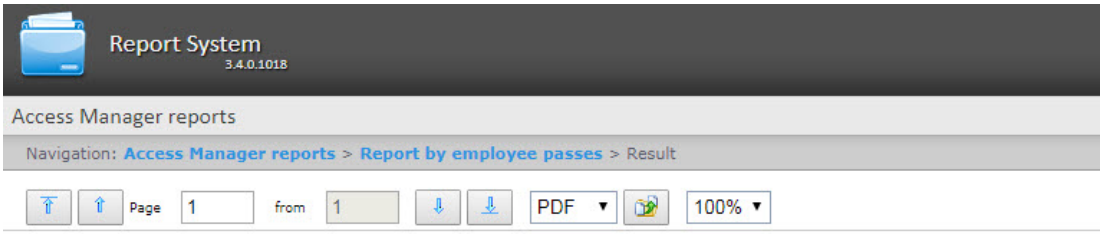
2. Set the report parameters in the following way:
   a. Set the **Expanded** checkbox (**1**) to display the additional data in the report (phone number, access levels, card issue date).
   b. In the **Readers** field (**2**) set checkboxes for the **Reader** objects, the information on which should be displayed in the report.

c. In the **Departments/Employees** field (**3**) set checkboxes for the departments and employees, the information on which should be displayed in the report.
d. From the **Period** drop-down list (**4**) select the time period for which the report is to be created.
   i. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields (**5**) using the **Calendar** tool.

> **Note**
>
> Click the button near the corresponding field to use the **Calendar** tool.

   ii. If the **User 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
   iii. If another period type is selected, specifying the date of start and end periods is not needed.

3. To create a report click **Execute** (**6**).
4. As a result the report with specified parameters is displayed.



Date: from 30.10.2018
to 30.10.2018

axxonSOFT
EXPERIENCE THE NEXT

Report by employee passes

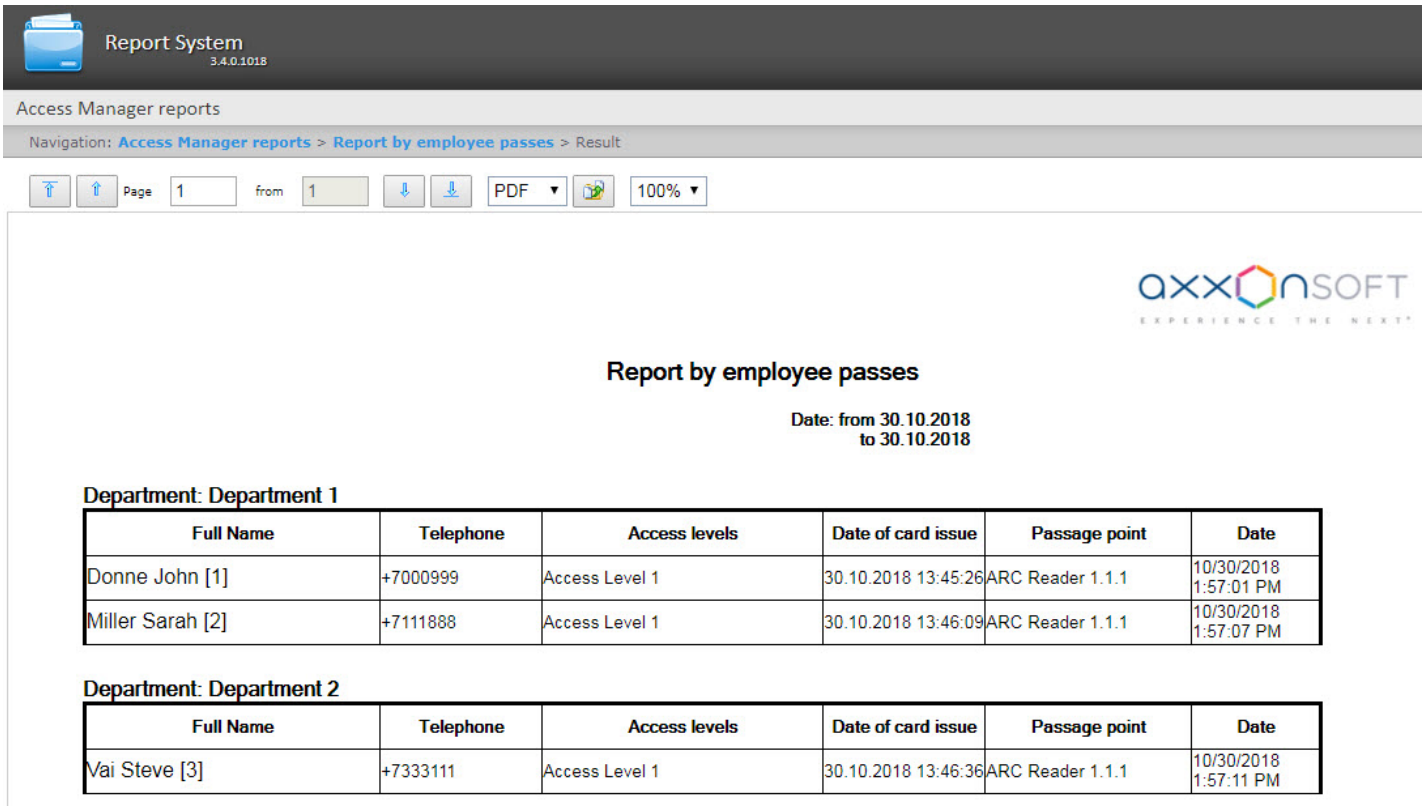
Department: Department 1

Full Name	Passage point	Date
Donne John [1]	ARC Reader 1.1.1	10/30/2018 1:57:01 PM
Miller Sarah [2]	ARC Reader 1.1.1	10/30/2018 1:57:07 PM

Department: Department 2

Full Name	Passage point	Date
Vai Steve [3]	ARC Reader 1.1.1	10/30/2018 1:57:11 PM

If the **Expanded** checkbox (**1**) is set, the report is displayed in the following way.



The report fields are described in the table.

Field name	Description
Full name	Full name of the employee
Telephone	Phone number of the employee
Access levels	Access levels of the employee
Date of card issue	Date when the card was issued to the employee
Passage point	Passage point through which the employee has passed
Date	Date and time of employee passage

Note
The employee personnel number is displayed in the square brackets in the **Full name** field.

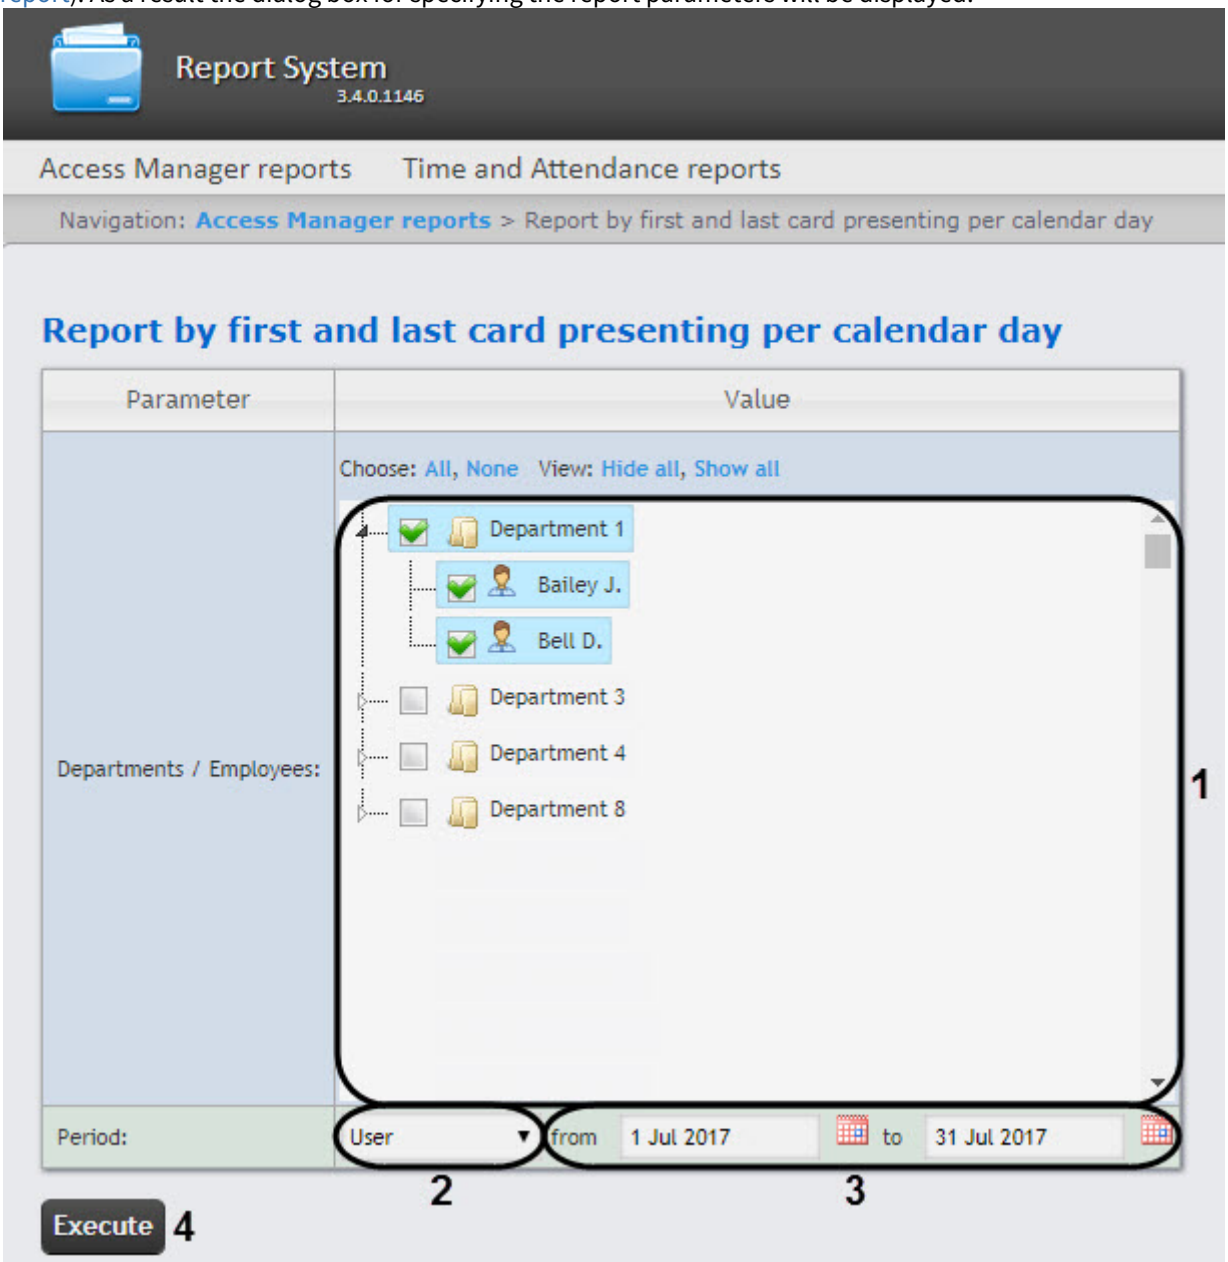
Note
In the report the employees are sorted by their personnel number and the passage date.

8.3.2.3 Report by first and last card presenting per calendar day

The **Report by first and last card presenting per calendar day** is a table which contains the information about the first and last time the selected employee presented the card to the passage point. Working schedules are ignored in the report, the data is displayed per calendar day. All passage points are analyzed during the report generation.

To create the **Report by first and last card presenting per calendar day**, do the following:

a. Select the **Report by first and last card presenting per calendar day** (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



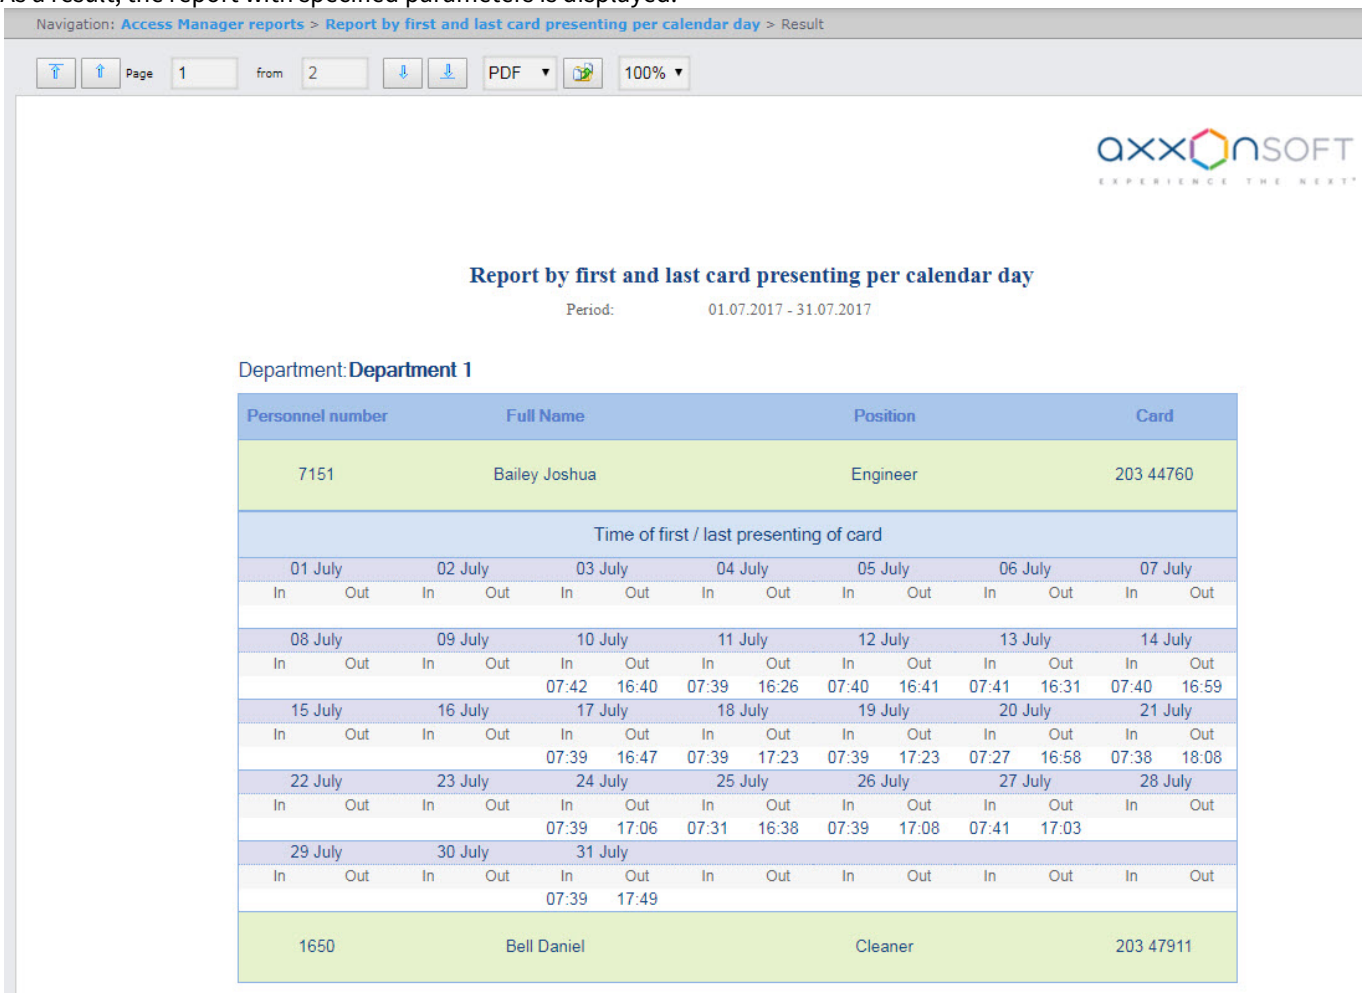
b. Set the report parameters in the following way:
c. In the **Departments/Employees** field (**1**) set checkboxes for the departments and employees, the information on which should be displayed in the report.
d. From the **Period** drop-down list (**2**) select the time period for which the report is to be created.
    i. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields (**3**) using the **Calendar** tool.

> **Note**
> Click the button near the corresponding field to use the **Calendar** tool.

    ii. If another period type is selected, specifying the date of start and end periods is not needed.

> **Note**
> Minimum time period for report displaying is a week.

2. To create a report, click **Execute** (**4**).
   As a result, the report with specified parameters is displayed.



The report fields are described in the table.

Field	Description
Personnel number	Personnel number of the employee
Full Name	Full name of the employee
Position	Position of the employee
Card	Emplyee card number
Time of first/last presenting of card	A table indicating the time of the first/last presenting of the card on each day within the selected time period. The time of the first presenting of the card is displayed in the **In** column, and the time of the last presenting of the card is displayed in the **Out** column.

Note
If the report was created automatically in Excel format (see Setting up Intellect Web Report System operation in the automatic mode), the Department/subdivision column will be displayed in the report. It contains the name of the department to which the employee belongs, and the time of first/last presenting of card will be displayed in a column.

	A	B	C	D	E	F	G
1	Report by first and last card presenting per calendar day						
2	from 1 July 2017 to 31 July 2017

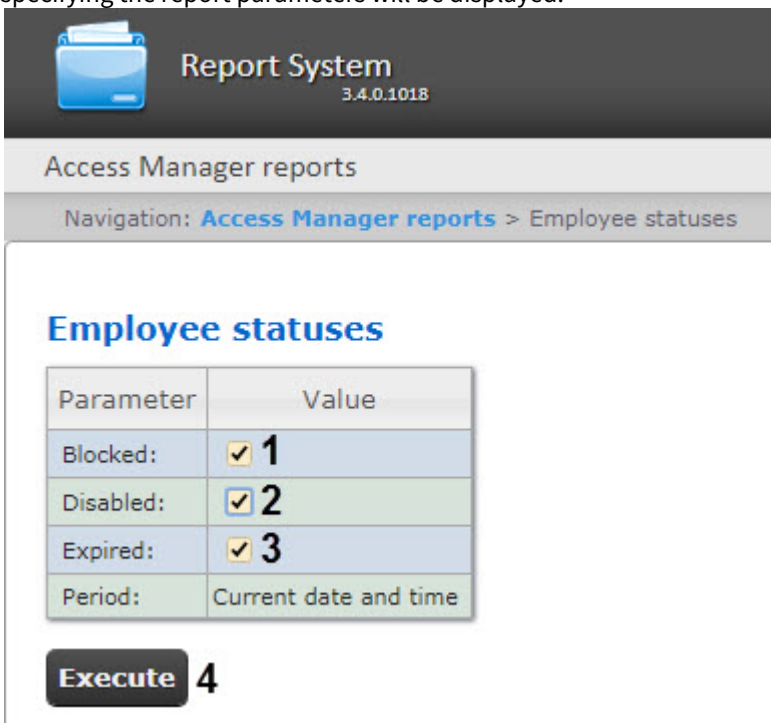
8.3.2.4 Employee statuses report

The **Employee statuses** report is a table which contains the information about the current status of employees' cards (expired, disabled, locked) and the dates of their expiration.

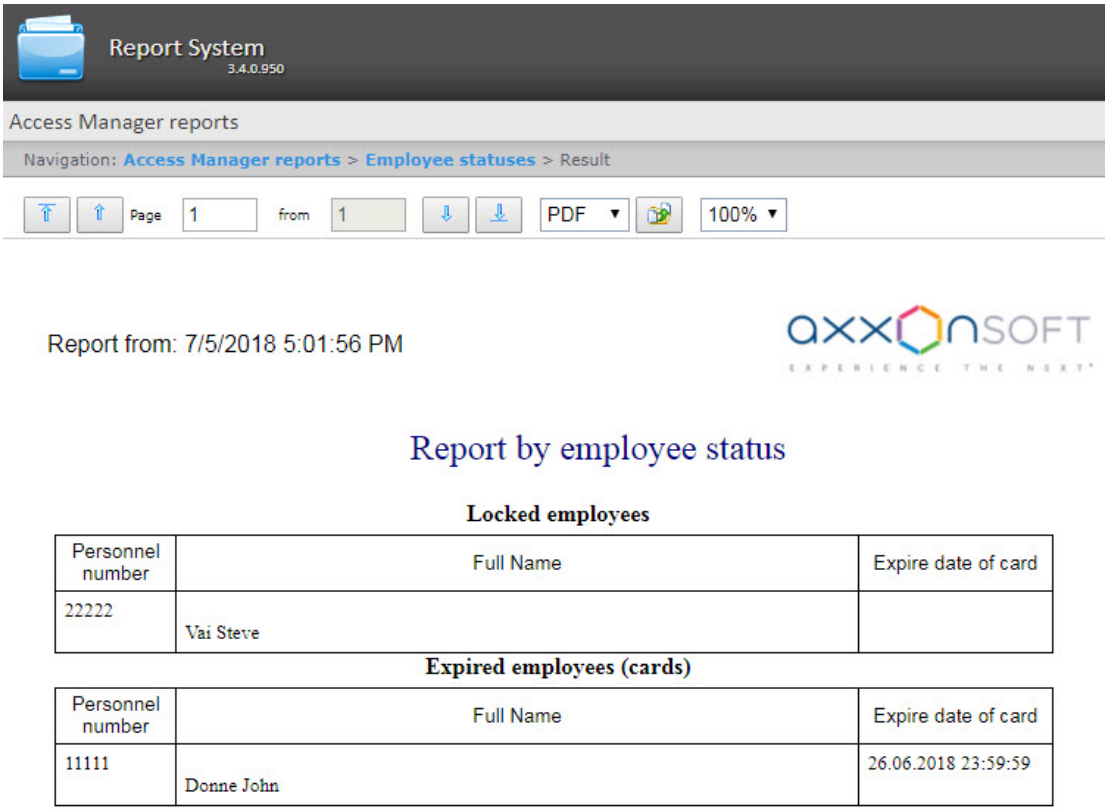
To create the **Employee statuses** report, do the following:

1. Select the **Employee statuses** report (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. Set the **Blocked** checkbox (**1**) to display the employees with locked cards.
   b. Set the **Disabled** checkbox (**2**) to display the employees with disabled cards.
   c. Set the **Expired** checkbox (**3**) to display the employees with expired cards.

3. To create a report click **Execute** (**4**).
4. As a result the report with specified parameters is displayed.



The report fields are described in the table.

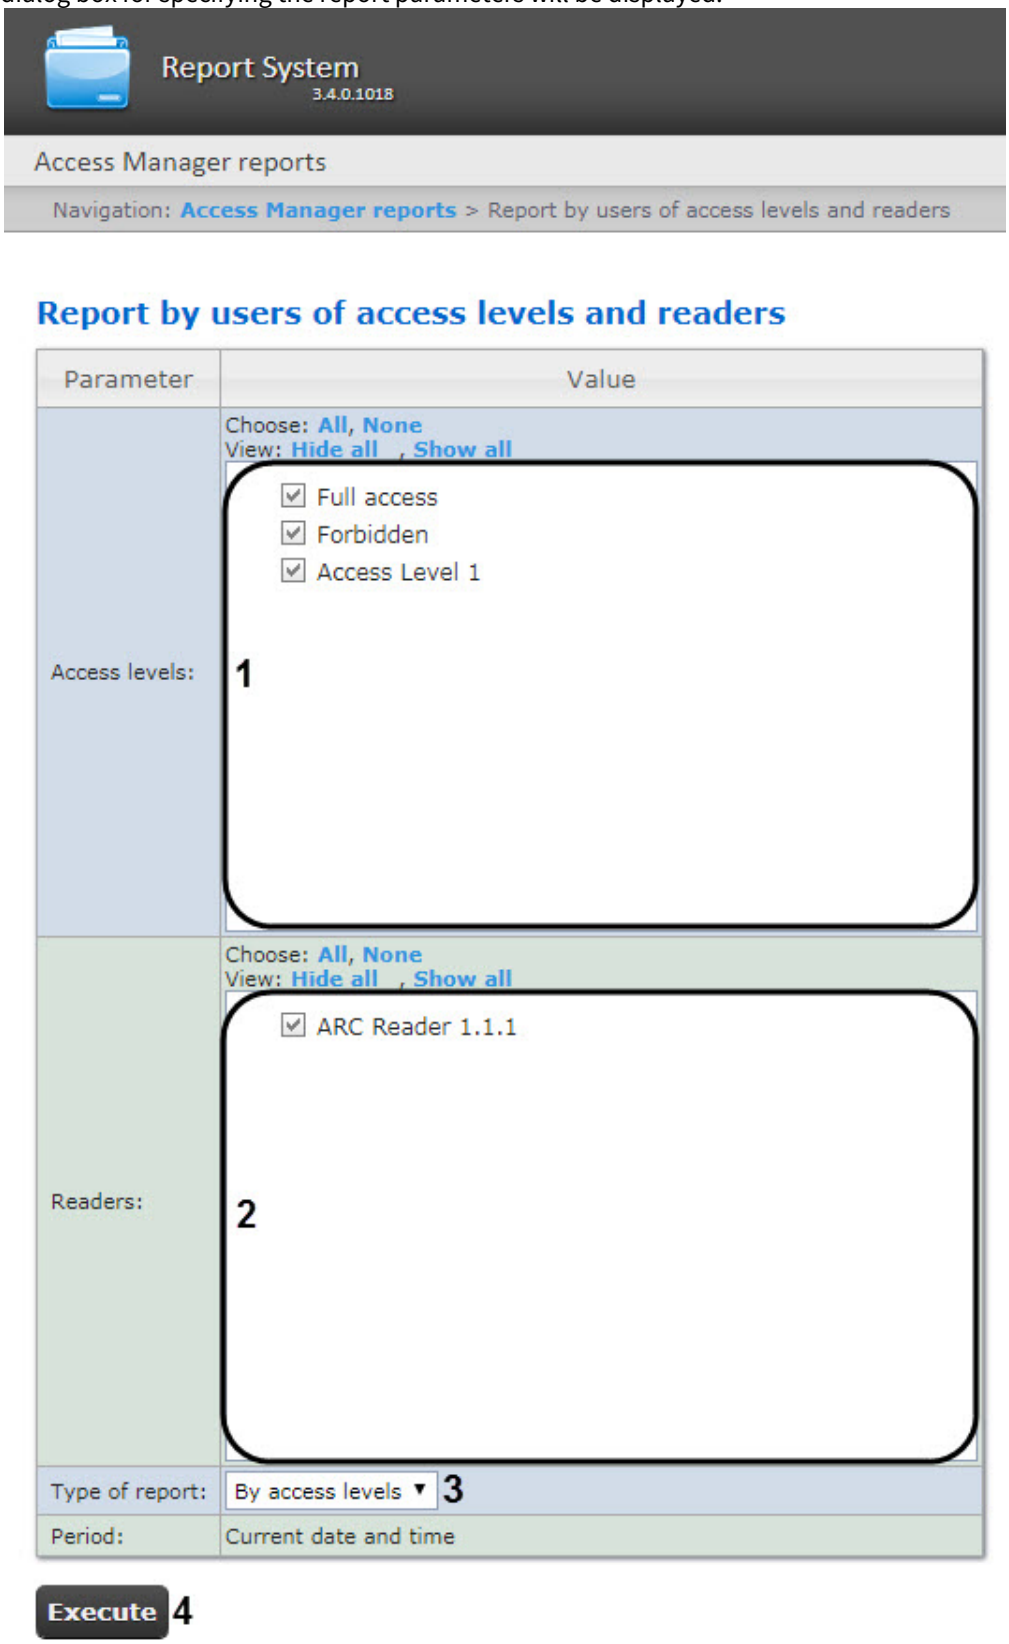
Field name	Description
Personnel number	Employee number in the *Access Manager* module
Full Name	Full name of the selected employee
Expire date of card	Expiration date of the employee card

8.3.2.5 Report by users of access levels and readers

The **Report by users of access levels and readers** is a table which contains the information about users with the selected access levels or selected passage points assigned to them.

To create the **Report by users of access levels and readers**, do the following:

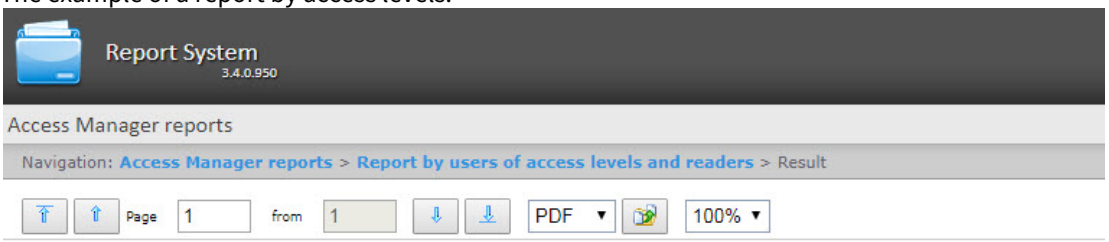
1. Select the **Report by users of access levels and readers** (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Access levels** field (**1**) set the checkboxes for the access levels the information on which should be displayed in the report.

b. In the **Readers** field (**2**) set the checkboxes for the readers the information on which should be displayed in the report.
c. From the **Type of report** drop-down list (**3**) select the required report type.

3. To create a report click **Execute** (**4**).
4. As a result the report with specified parameters is displayed.
   a. The example of a report by access levels.



Report by users of access levels and passage points

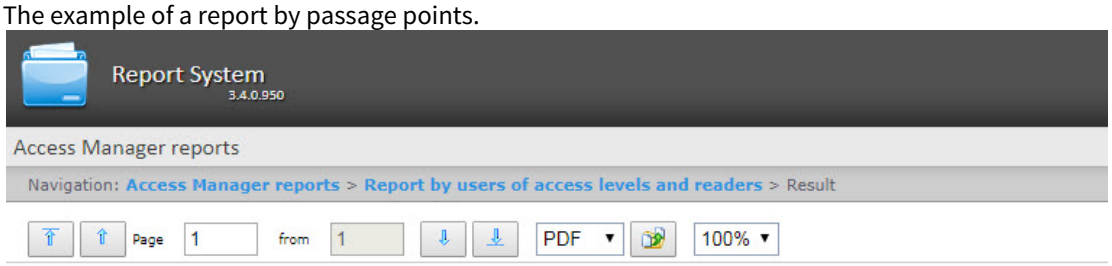
Access level: Access level 1

Personnel number	Full Name	Department
11111	Donne John	Department 1

Access level: Access level 2

Personnel number	Full Name	Department
22222	Vai Steve	Department 2

   b. The example of a report by passage points.



Report by users of access levels and passage points

Passage point:ARC Reader 1.1.1

Personnel number	Full Name	Department
11111	Donne John	Department 1

Passage point:ARC Reader 1.2.1

Personnel number	Full Name	Department
22222	Vai Steve	Department 2

The report fields are described in the table.

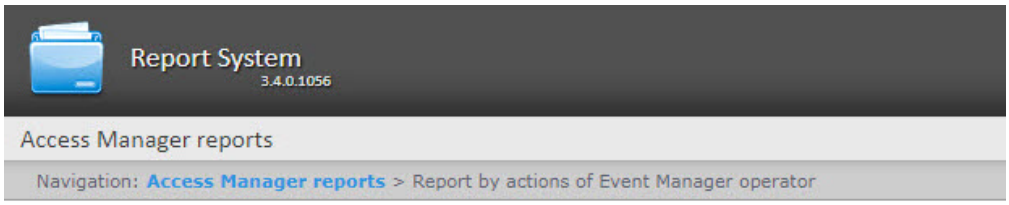
Field name	Description
Personnel number	Employee number
Full name	Full name of the employee
Department	Employee department

8.3.2.6 Report by actions of Event Manager operator

The **Report by actions of Event Manager operator** is a table which displays the requests received by the **Event Manager** operator and his reactions to them.

To create the **Report by actions of Event Manager operator**, do the following:

1. Select the **Report by actions of Event Manager operator** (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



Report by actions of Event Manager operator

Parameter	Value
Operators:	Choose: All, None View: Hide all , Show all ☑ Unauthorized user 1
Computers:	Choose: All, None View: Hide all , Show all ☑ R-NAZAROV-PC 2
Events and reactions:	Choose: All, None View: Hide all , Show all + ☑ Events + ☑ Reactions 3
Departments / Employees:	Choose: All, None View: Hide all , Show all + ☑ Department 1 + ☑ Department 2 4

2. Set the report parameters in the following way:
    a. In the **Operators** field (**1**) set the checkboxes for the operators whose actions should be displayed in the report.
    b. In the **Computers** field (**2**) set the checkboxes for the computers the information on which should be displayed in the report.
    c. In the **Events and reactions** field (**3**) set the checkboxes for the events and reactions the information on which should be displayed in the report.
    d. In the **Departments/Employees** field (**4**) set the checkboxes for the departments and employees the information on which should be displayed in the report.
    e. From the **Period** drop-down list (**5**) select the time period for which the report is to be created.
        i. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields (**6**) using the **Calendar** tool.

> **Note**
> Click the
>
> button near the corresponding field to use the **Calendar** tool.

        ii. If the **User 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
        iii. If another period type is selected, specifying the date of start and end periods is not needed.
3. To create a report click **Execute** (**7**).
4. As a result the report with specified parameters is displayed.

Date	Passage point	Event	Full Name	Department	Card	Operator	Action	Workstation
10.09.2017 10:59:26	entrance	Passage request	Darcy Johnson		(200)0000	Mark Harrington	'Allow'	Computer 1
10.09.2017 11:01:08	exit	Passage request	Darcy Johnson		(200)0000	Mark Harrington	'Deny'	Computer 1
10.09.2017 12:35:33	exit	Passage request	Darcy Johnson		(200)0000	Mark Harrington	'Allow'	Computer 1
10.09.2017 12:41:24	exit	Passage request	Darcy Johnson		(200)0000	Mark Harrington	'Deny'	Computer 1
10.09.2017 12:41:46	entrance	Passage request	Darcy Johnson		(200)0000	Mark Harrington	'Deny'	Computer 1

The report fields are described in the table.

Field name	Description
Date	Date of the request received by the operator
Passage point	The passage point controlled by the **Event Manager** module
Event	Request received by the operator
Full Name	Full name of the requesting person
Department	Department of the requesting person
Card	Card number of the requesting person

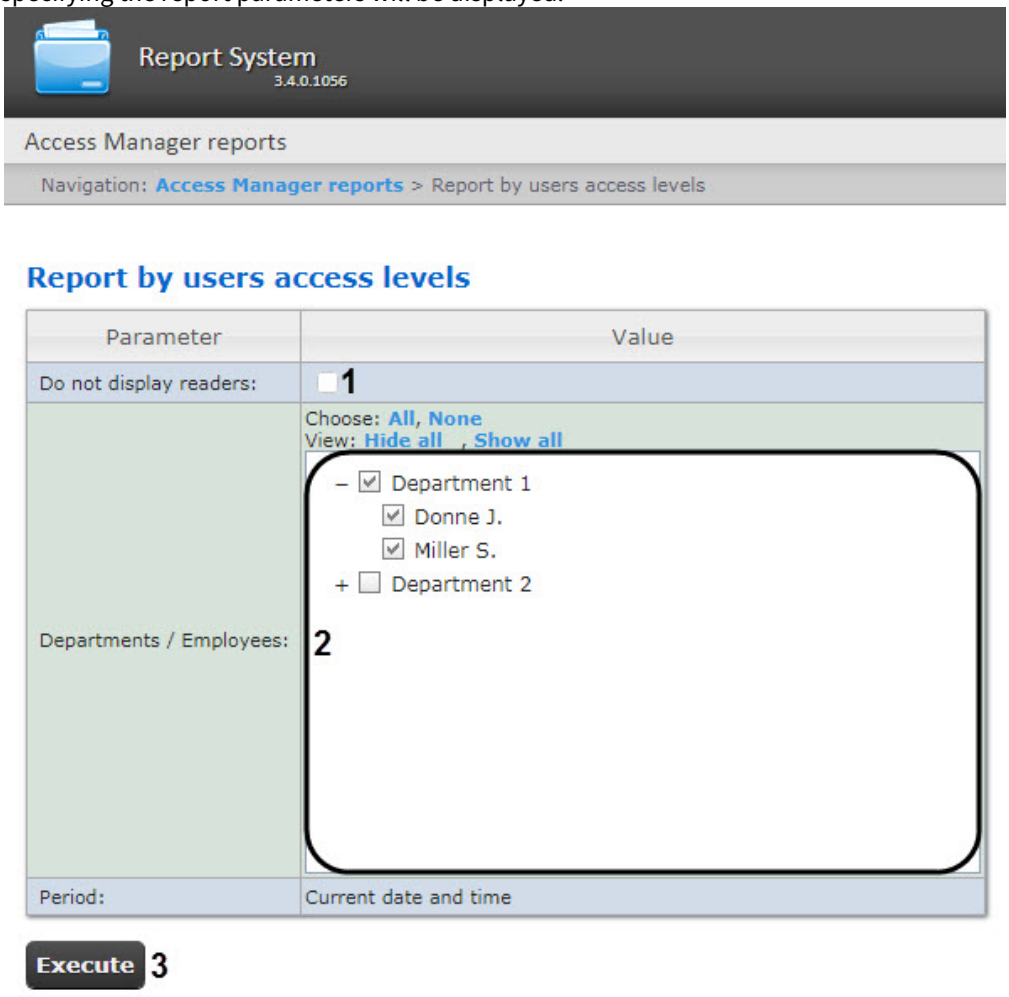
Field name	Description
Operator	Full name of the oprator
Action	Operator reaction to a request
Workstation	The name of the computer on which the operator action was performed

8.3.2.7 Report by users access levels

The **Report by users access levels** is a table which contains the information about the access levels of the selected employees, and the passage points which are available for passing for the selected employees.

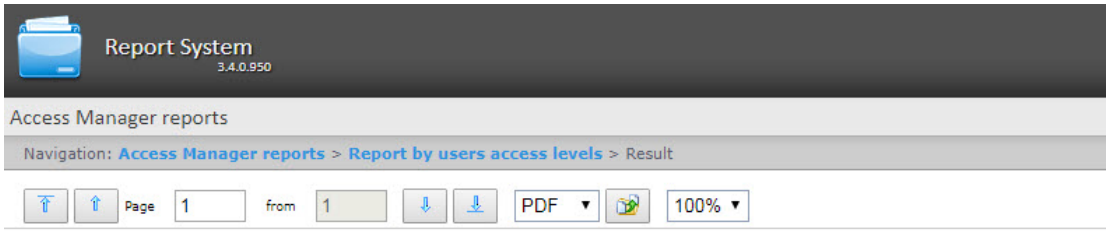
To create the **Report by users access levels**, do the following:

1. Select the **Report by users access levels** (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. Set the **Do not display readers** checkbox (**1**) to hide the readers in the report.
   b. In the **Departments/Employees** field (**2**) set the checkboxes for the departments and employees the information on which should be displayed in the report.
3. To create a report click **Execute** (**3**).

4. As a result the report with specified parameters is displayed.



Users access levels

Department: Department 1

Personnel number	Full Name	Access levels	Passage points
11111	Donne John	Access level 1	ARC Reader 1.1.1

Department: Department 2

Personnel number	Full Name	Access levels	Passage points
22222	Vai Steve	Access level 2	ARC Reader 1.2.1

The report fields are described in the table.

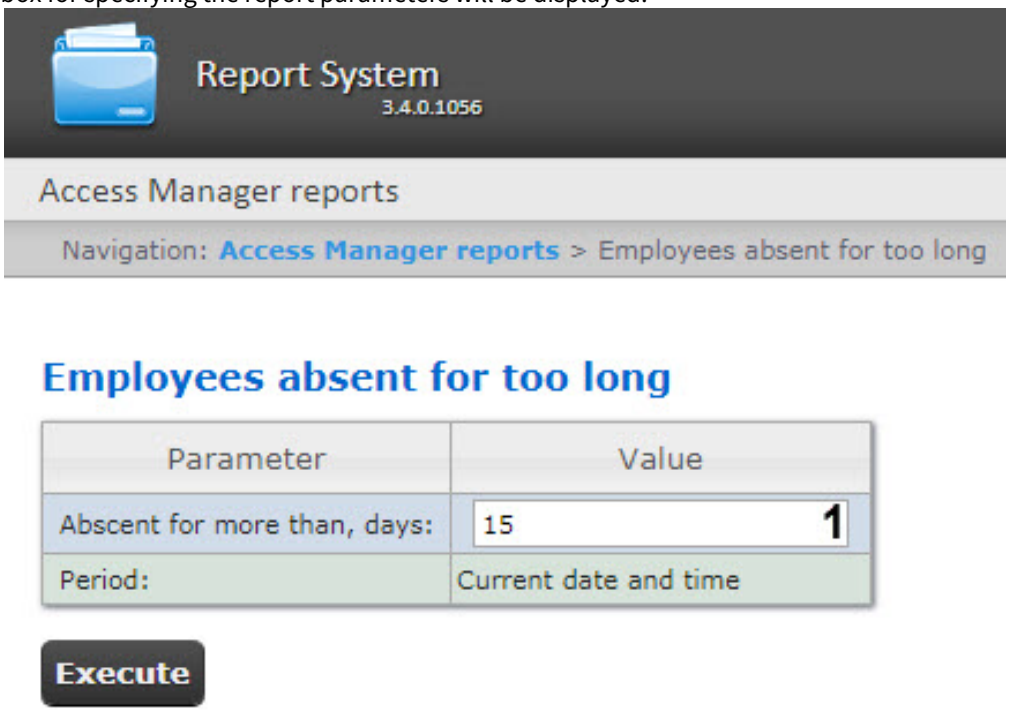
Field name	Description
Personnel number	Employee number
Full name	Full name of the employee
Access levels	Access level of the selected employee
Passage points	Passage points (readers) through which the employee can pass

8.3.2.8 Employees absent for too long report

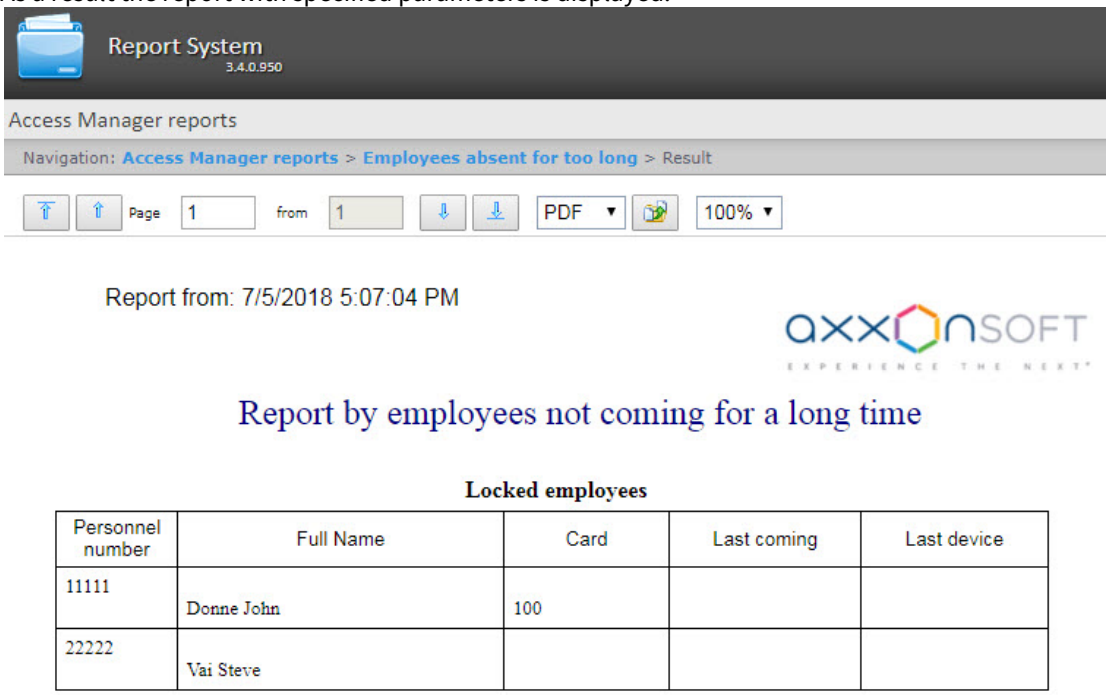
The **Employees absent for too long** report is a table which contains the information about the last passes of the employees who are absent for a long time. Absent means that their cards were not used for a specified number of days.

To create the **Employees absent for too long** report, do the following:

1. Select the **Employees absent for too long** report (see Selecting the type of Access Manager report). As a result the dialog box for specifying the report parameters will be displayed.



2. In the **Absent for more than, days** (**1**) specify the required number of days.
3. To create a report click **Execute** (**2**).
4. As a result the report with specified parameters is displayed.



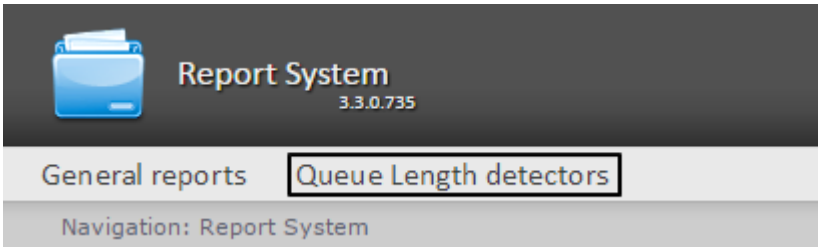
The report fields are described in the table.

Field name	Description
Personnel number	Employee number
Full Name	Full name of the selected employee
Card	Number of the employee card

Field name	Description
Last coming	Date of the employee last pass through the passage point
Last device	Identifier of the passage point that registered the last employee pass

8.4 Working with reports by Queue Length detectors

Reports by Queue Length detectors are available in the **Queue Length detectors** menu of the *Intellect Web Report System*.



In order to be able to view and generate reports by Queue Length detectors, you should install and configure the **Analytics Pack subsystem**, as described in the Detector Pack user's manual.

In the **Administration** menu of the *Intellect Web Report System*, you should configure the role with the right to perform the operation of the Queue Length Detector Operator and assign it to the responsible users, as described in Set up the roles and users.

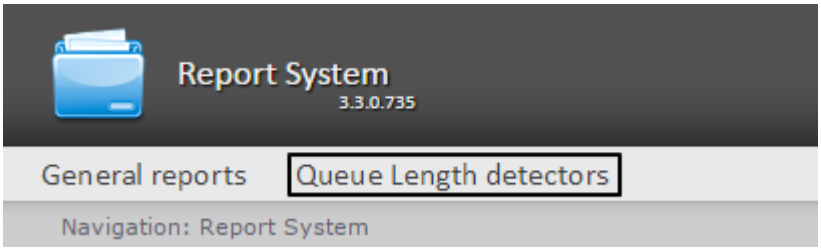
There are two types of reports by Queue Length detectors:

- Average queue length in time interval
- Queue length threshold crossing

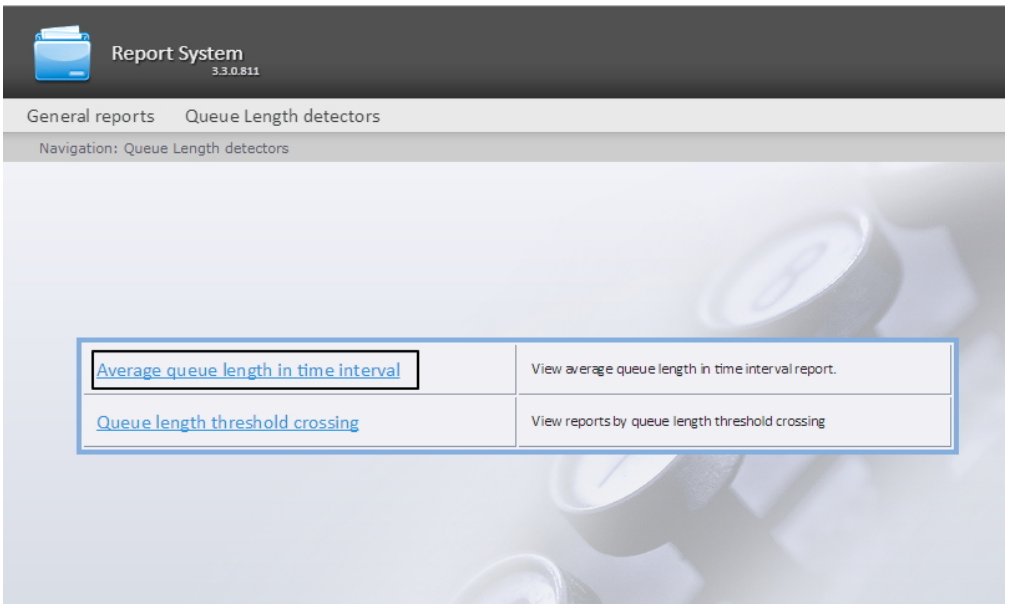
> **Note**
> By default, in the reports by Queue Length detectors, the values equal to 0 are not included to the report table. To include the zero values in the report, it is necessary to perform the configuration (see Disabling the zero value filter).

8.4.1 Average queue length in time interval

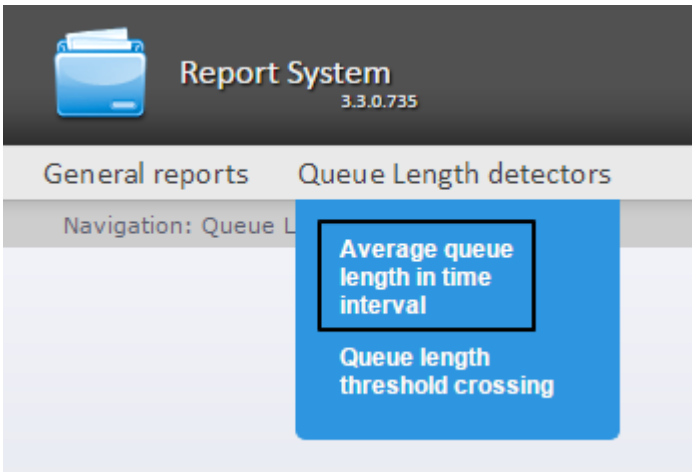
To create an **Average queue length in time interval** report click **Queue Length detectors** link in the main menu of the *Intellect Web Report System.*



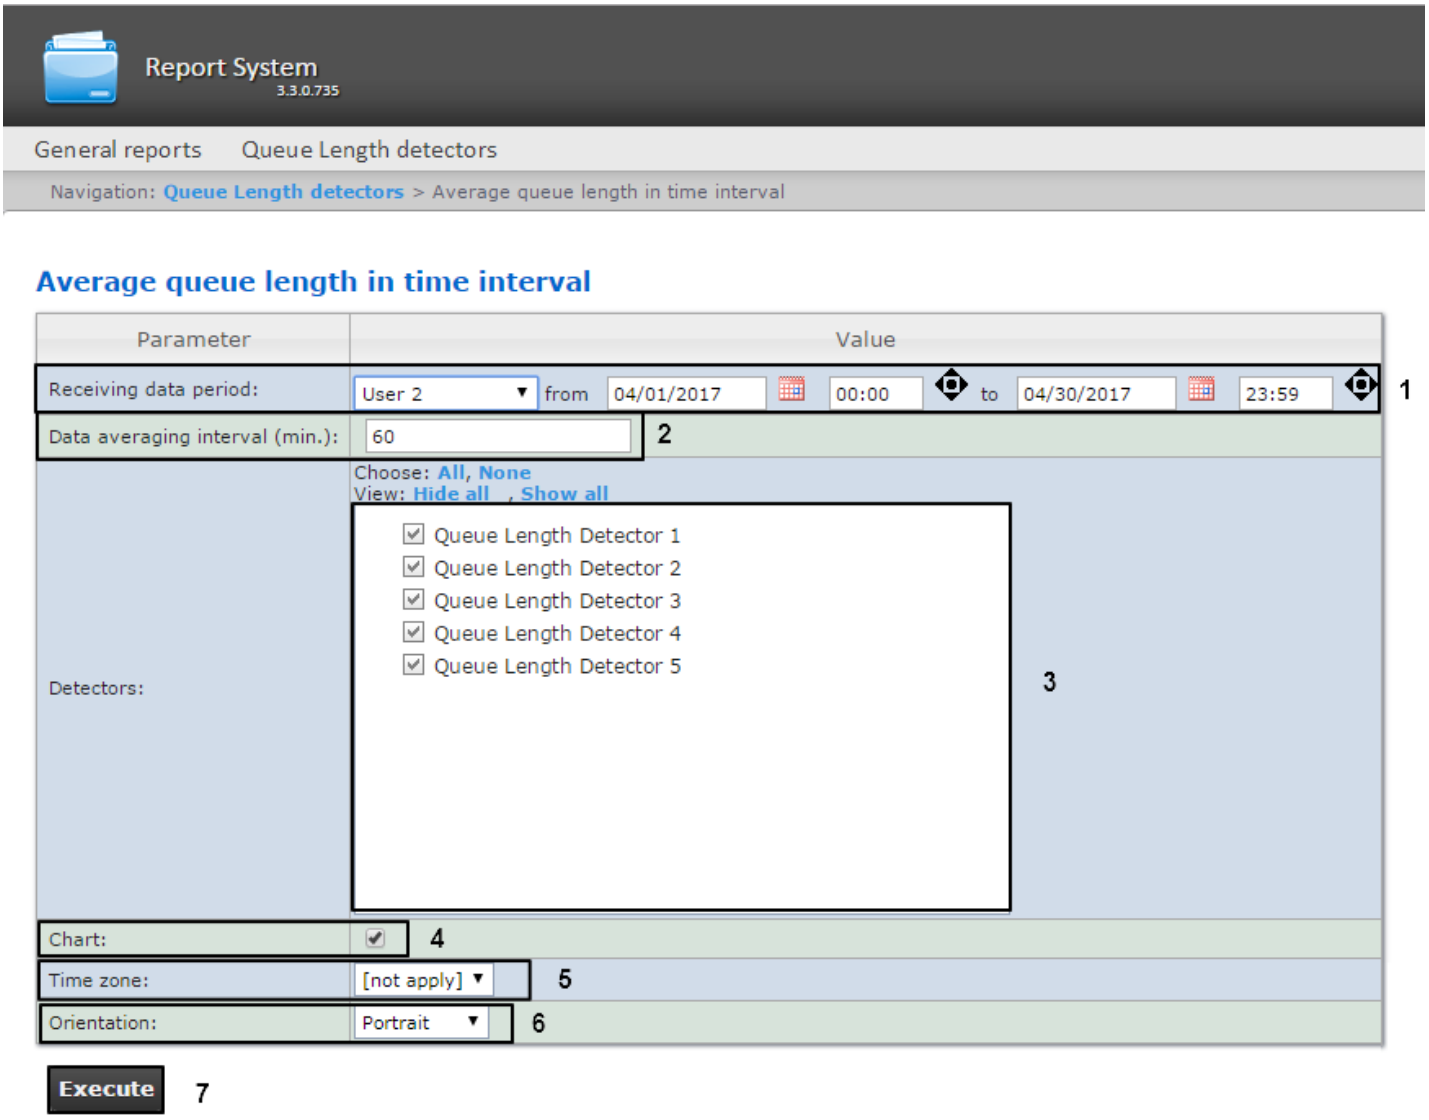
Next, click **Average queue length in time interval**.



Note.
A link to the report by average queue length in time interval is also available when the cursor is hovered over the **Queue Length detectors** link in the main menu.



The report by average queue length in time interval page will open.



Set the following report parameters:

1. Specify the period in the following way:
   a. From the **Period:** drop-down list select the time period for which the report is created (**1**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, additionally enter the time of start and end periods for which the report is created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
2. Enter a period of time (in minutes) between load values in the **Step (min.)** field (**2**). The average values of queue length for the specified interval are displayed in the report.

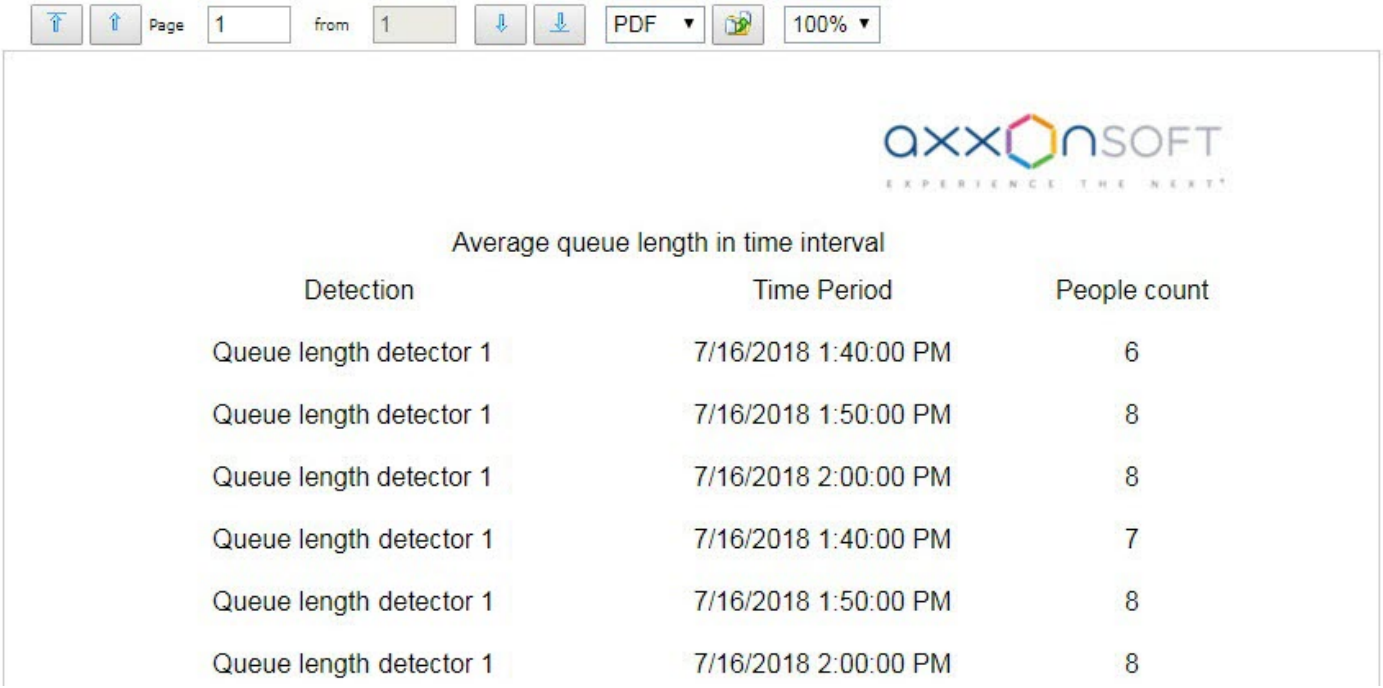
   > **Note.**
   > If the average value is null for all such intervals in the specified period, this period will not be reflected in the report. It is recommended to change the step in this case.

3. In the **Detectors** field set checkboxes for the **Queue Length Detector** objects that will supply the information for the report (**3**).
4. If you want to view a report as a chart, set the corresponding checkbox (**4**).
5. From the **Time zone** drop-down list, select time zone by which report is to be created (**5**).

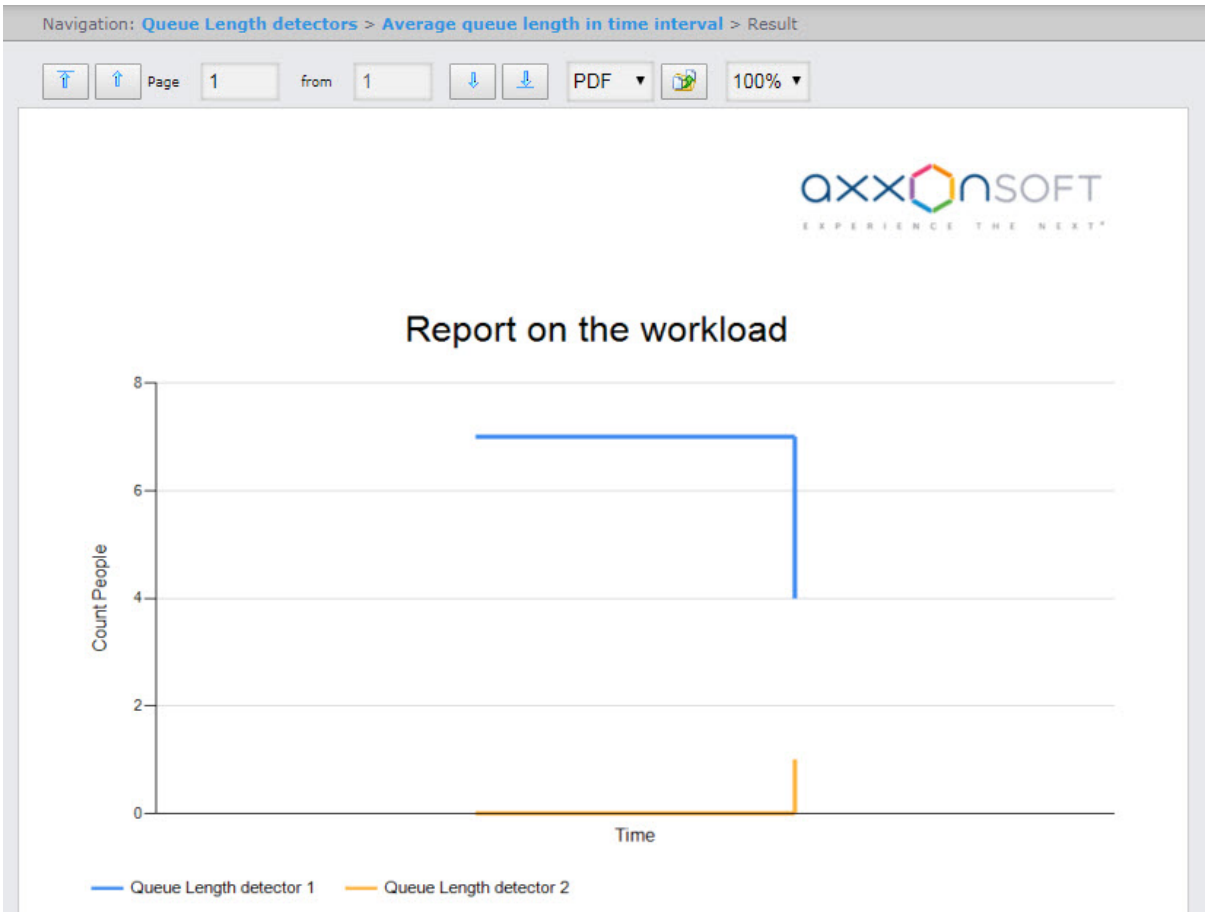
> **Note.**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

6. From the **Orientation** drop-down list, select the orientation of the printed report page: **Portrait**, **Landscape** (**6**).
7. To create a report click **Execute** (**7**).

As a result, the report by the average queue length in time interval with specified parameters will be displayed.

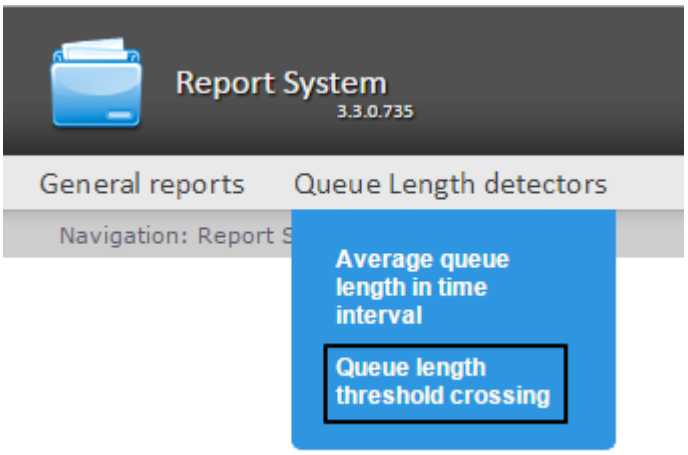


Example of a report of average queue length in time interval as a chart is given in the following figure. If more than one detector is used, the data from each detector will be displayed in its own color.



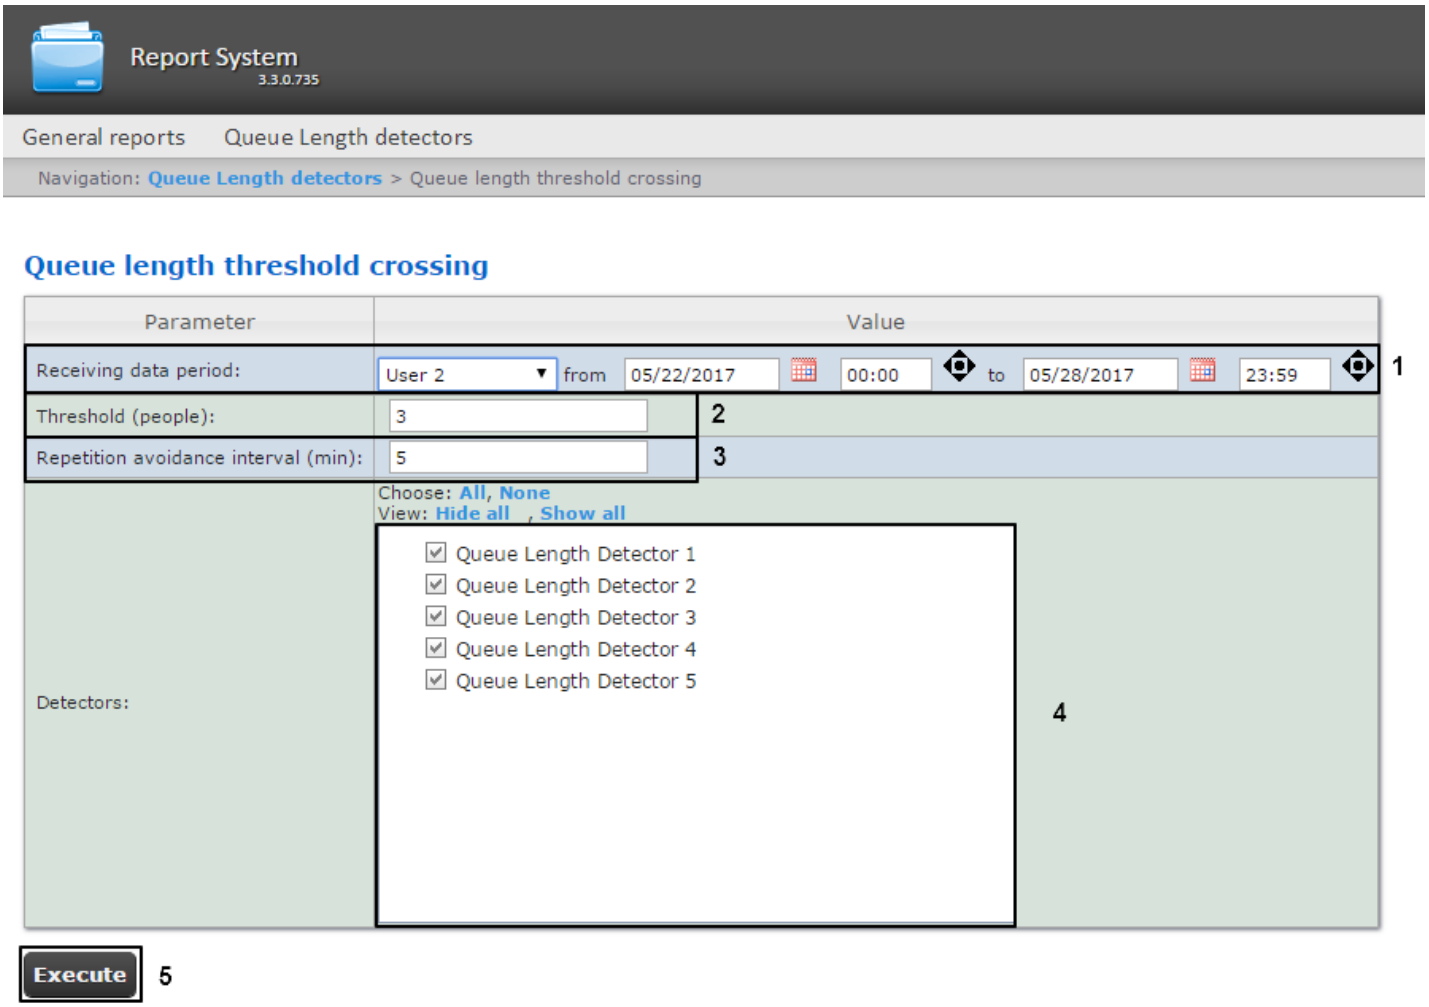
8.4.2 Queue length threshold crossing

To create a **Queue length threshold crossing** report, hover the cursor on the **Queue Length detectors** item of the main menu of the *Intellect Web Report System*.



> **Note**
> At the moment of this writing, the **Queue length threshold crossing** report is available only from the drop-down menu.

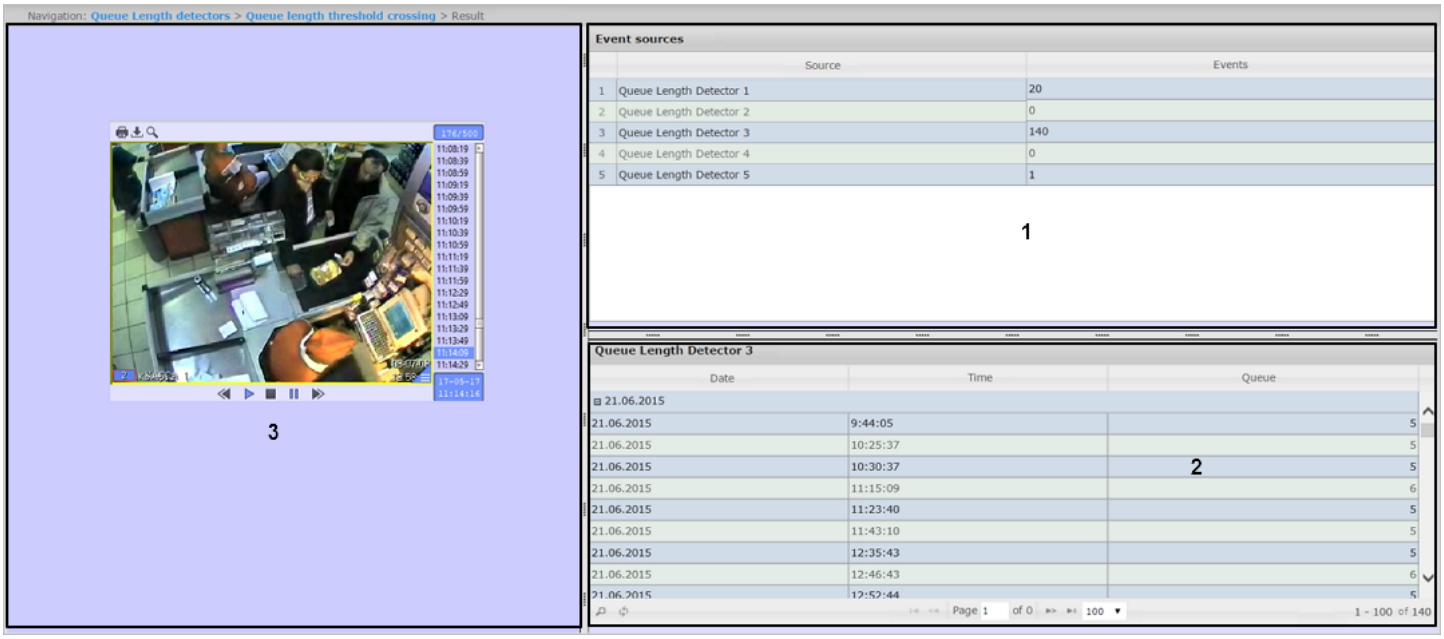
The report by queue length threshold crossing page will open.



Set the following report parameters:

1. Specify the period in the following way:
   a. From the **Period:** drop-down list select the time period for which the report is created (**1**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, additionally enter the time of start and end periods for which the report is created using the button.
   If another period type is selected, specifying the date of start and end periods is not needed.
2. In the **Threshold (people)** field set the number of people in the queue, which is considered a threshold (**2**).
3. In the **Repetition avoidance interval (min.)** field enter the time in minutes, during which the event of exceeding the threshold of the queue length will not be generated (**3**).
4. In the **Detectors** field set checkboxes for the **Queue Length Detector** objects that will supply the information for the report (**4**).
5. To create a report click **Execute** (**5**).

As a result, the report by queue length threshold crossing will be generated with the specified parameters.



The report has a three-sectioned structure:

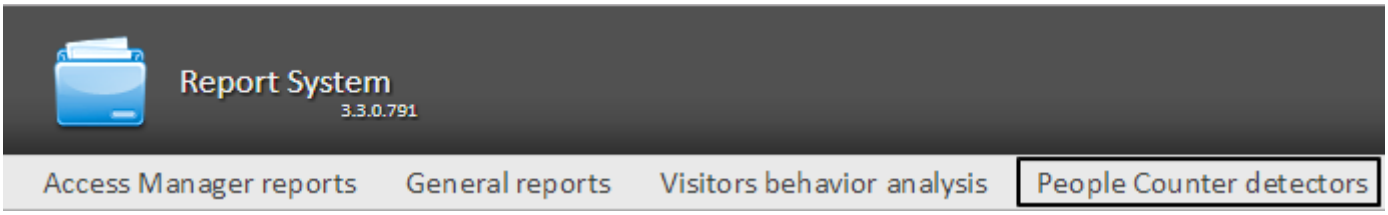
1. Section **1** displays a list of queue length detectors that have recorded exceeding the threshold events for the specified period, and the number of recorded events.
2. Section **2** displays a detailed table of events recorded by the detector selected in section **1**, the time of recording for each event, and the number of people in the queue at the specified time. The maximum number of entries on one page of the table is 100.
3. In section **3**, you can watch the video of the event selected in section **2**.

8.5 Working with reports by People Counter detectors

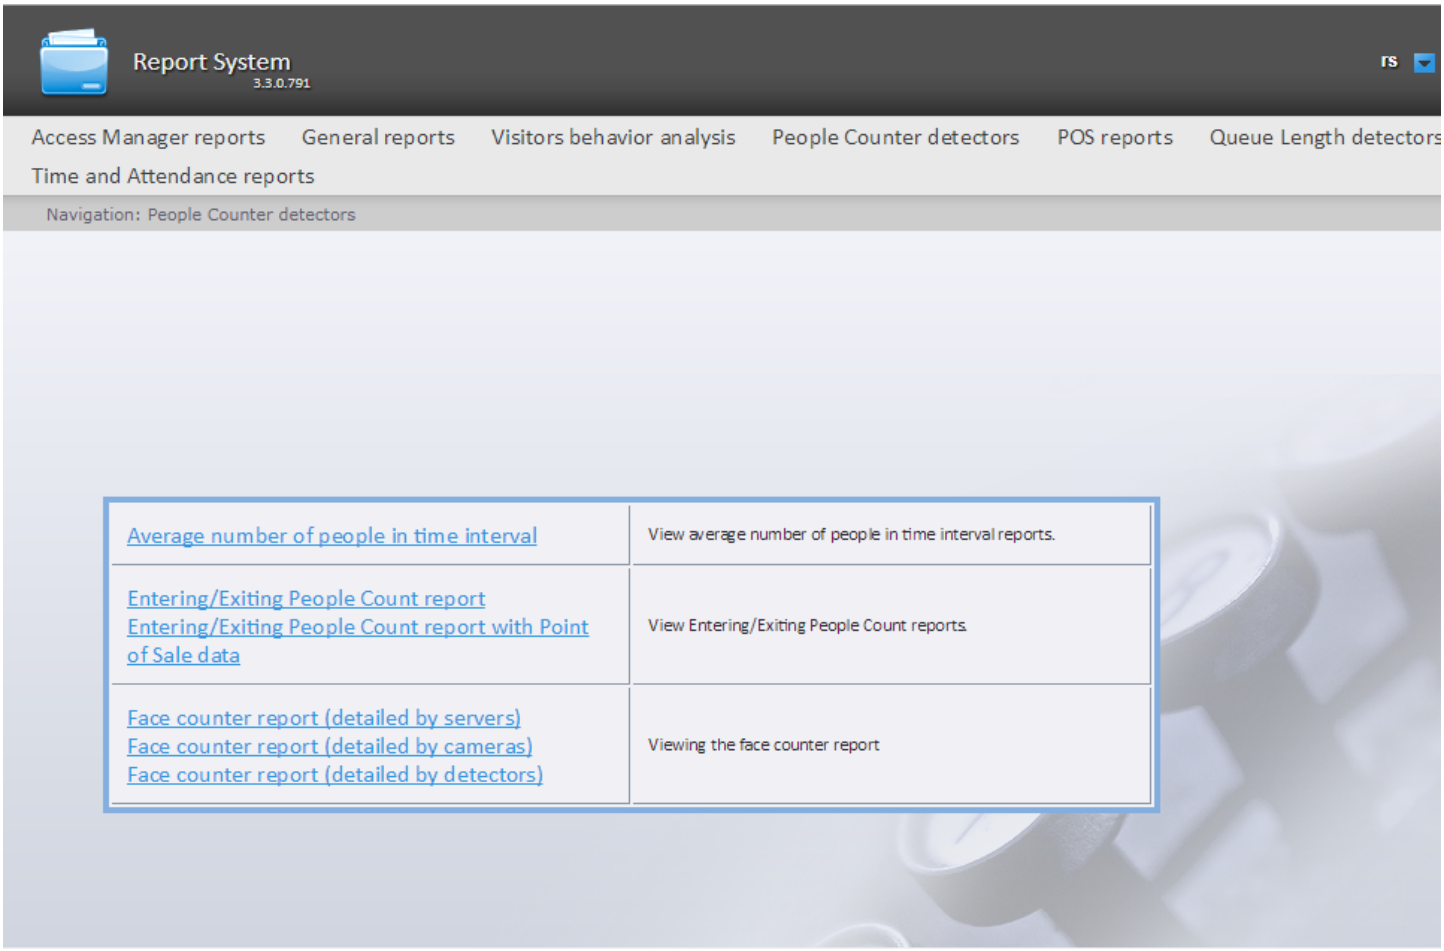
To work with the reports by the People Counter detectors, select and build the required report. The description and purpose of each report is presented on the corresponding page.

8.5.1 Selecting a type of reports by People Counter detector

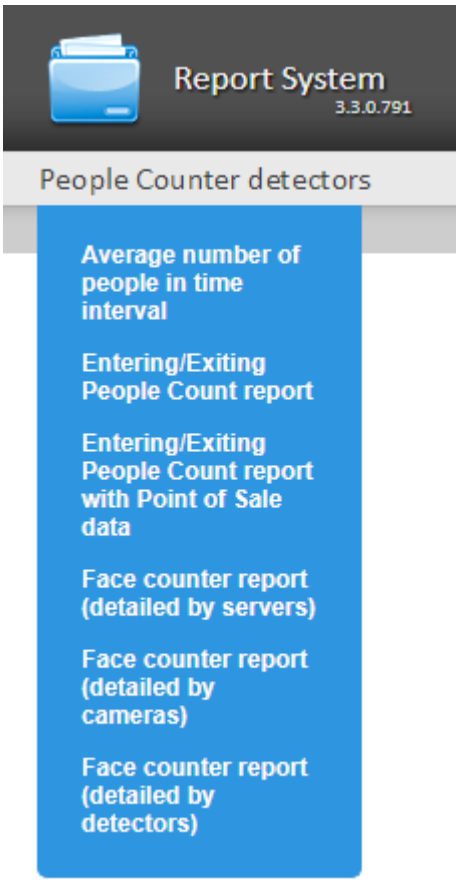
To select a type of report by people counter detectors click **People Counter detectors** link in the report menu of *Intellect Web Report System*.



As a result the list of available reports by people counter detectors is displayed. For switching to the required report click the corresponding link.



List of links for switching to reports by people counter detectors is available when hovering over the **People Counter detectors** link in the report menu.



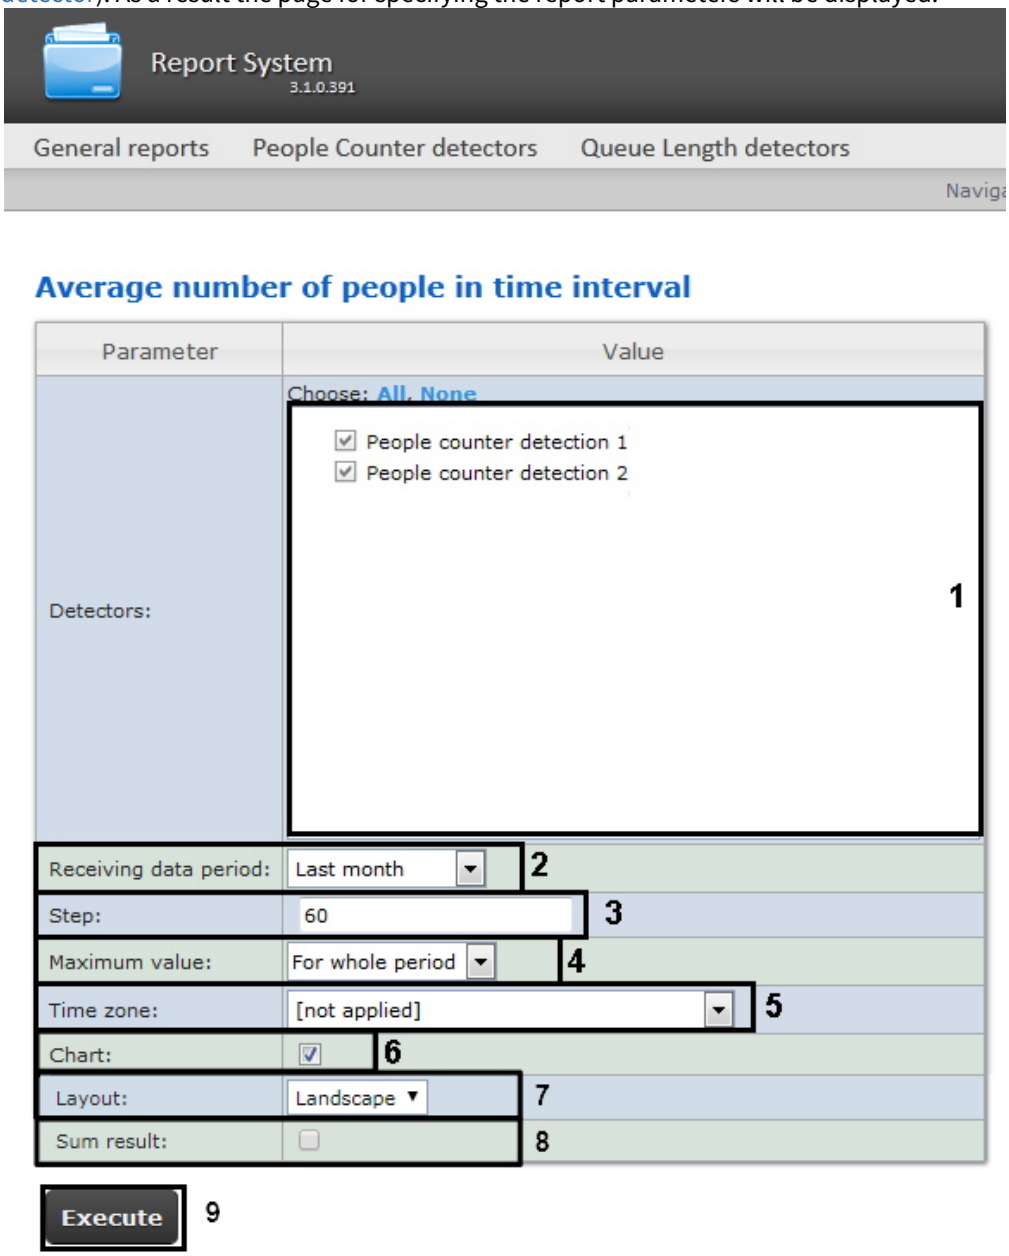
8.5.2 Creating a report of average number of people in time interval

The **Average number of people in time interval** report allows getting the data about the people quantity for the selected time period. The data can be presented as a table and a chart.

> **Note**
> The **Average number of people in time interval** report is related to the **People Counter detector** (it is necessary to create the corresponding object in the *Intellect* software).

To create the **Average number of people in time interval** report, do the following:

1. Select the **Average number of people in time interval** report type (see Selecting a type of reports by People Counter detector). As a result the page for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Detectors** field set checkboxes for those **People counter** objects which data should be displayed in the report (**1**).
   b. Specify the period in the following way:
      i. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**2**).
      ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

> **Note**
>
> To use the **Calendar** tool, click the button near the corresponding field.

      iii. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
      iv. If other period type is selected, specifying the date of start and end periods is not needed.

c. Enter a time period (in minutes) during which the values received from people counter detector will be averaged in the **Step** field (**3**). The average values of people amount for the specified interval are displayed in the report.

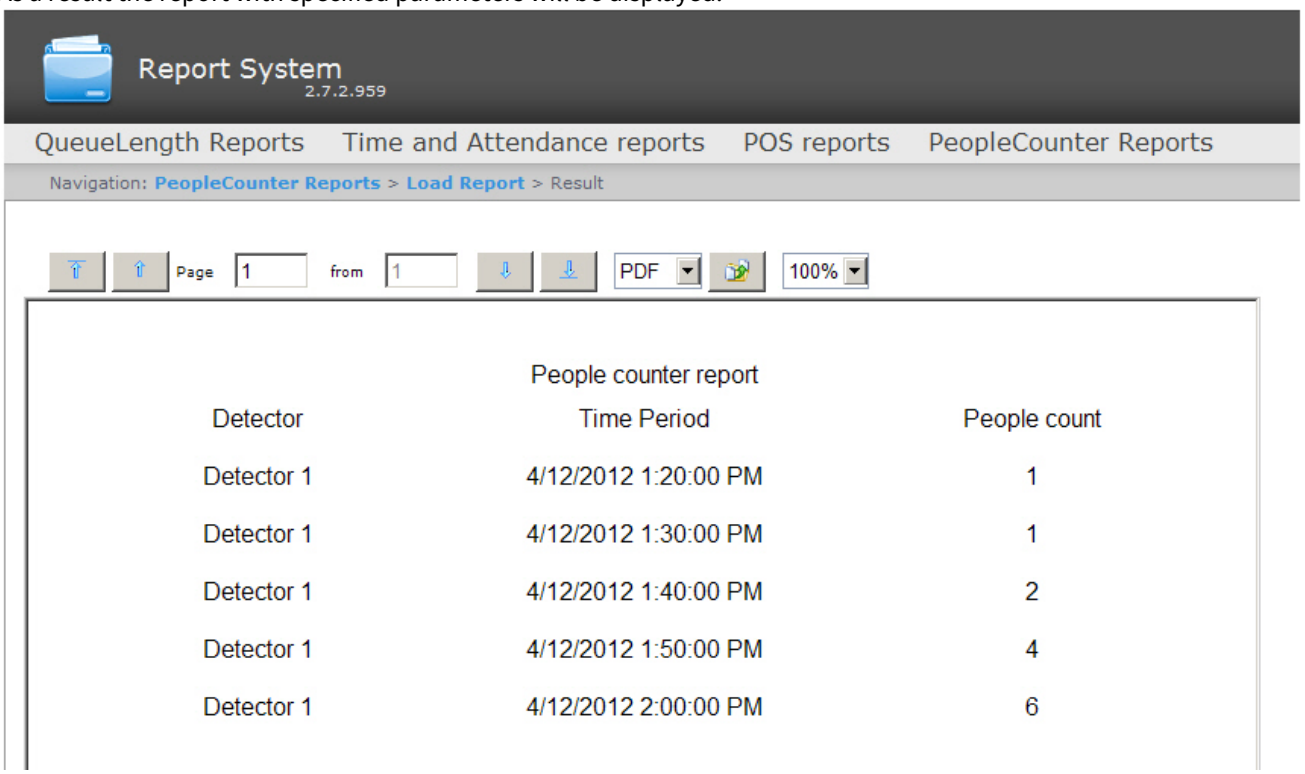
> **Note.**
> If the average value is null the empty report will be displayed for such intervals for the specified period. It is recommended to change the step in this case.

d. In the **Maximum value** field specify a maximum value of people that will be displayed in a chart (**4**).
e. From the **Time zone** drop-down list select time zone by which report is to be created (**5**).

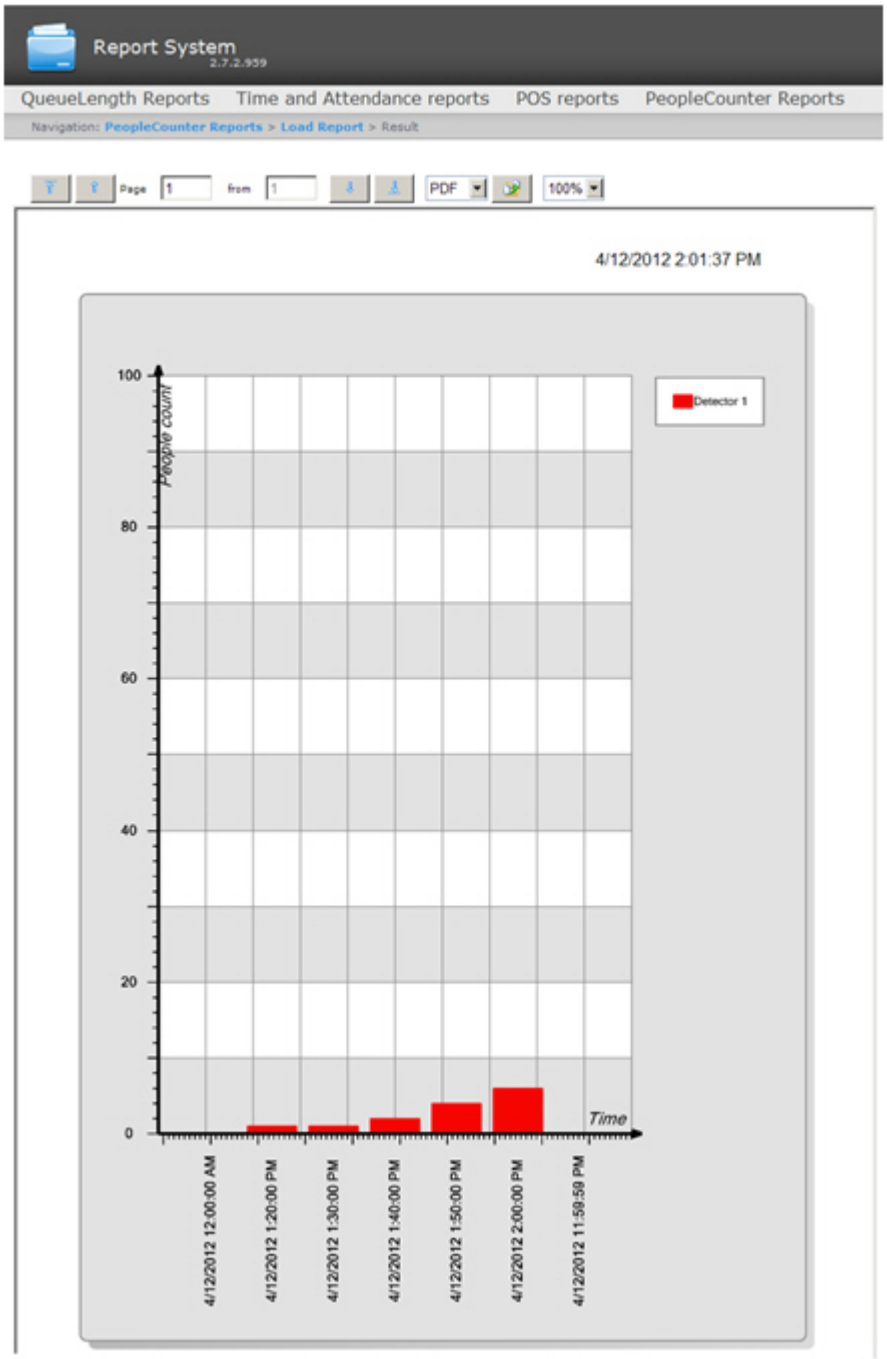
> **Note.**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

f. If it is necessary to view a report as a chart, set the **Chart** checkbox (**6**).
g. In the **Layout** field, select the print layout of the report: **Portrait**, **Landscape** (**7**).
h. Set the **Sum results** checkbox to display sum result by selected detections in the report (**8**).

3. To create a report click **Execute** (**9**).
4. As a result the report with specified parameters will be displayed.



The example of the report as a chart is given in the following figure.



Note
The procedure of the **People Counter detector** operation for building the **Average number of people in time interval** report is as follows:

1. The basic data are the entering and exiting events sorted by time.
2. The previous calculations to create the **Number of people at a time** function are performed:
    a. During the specified period the "current number of people" in the zone is calculated at a time. Depending on the people entering or exiting the basic data is increasing or reducing by one.
    b. If the "current number of people" takes the negative value on the next step (the number of exiting people from the area is more than number of entering people to this area), the "current number of people" is set to zero. Also, the "current number of people" is set to zero every day at 2 a.m. (on default) or after the time (in minutes) past midnight specified as PeopleCounterZeroPointMinute key in C:\Program Files\Intellect\Modules\Wt2\Web.config file.
    For example, the string
    add key="PeopleCounterZeroPointMinute" value="60"
    means that the people counter is set to zero in 60 minutes past midnight.
    c. It there are no events about entering or exiting to the defined time, the "current number of people" remains unchanged.
3. For every interval the average number of people being in the area is calculated. The **Average number of people for the interval** is calculated as the average value of the "Number of people at a time" function at a time.

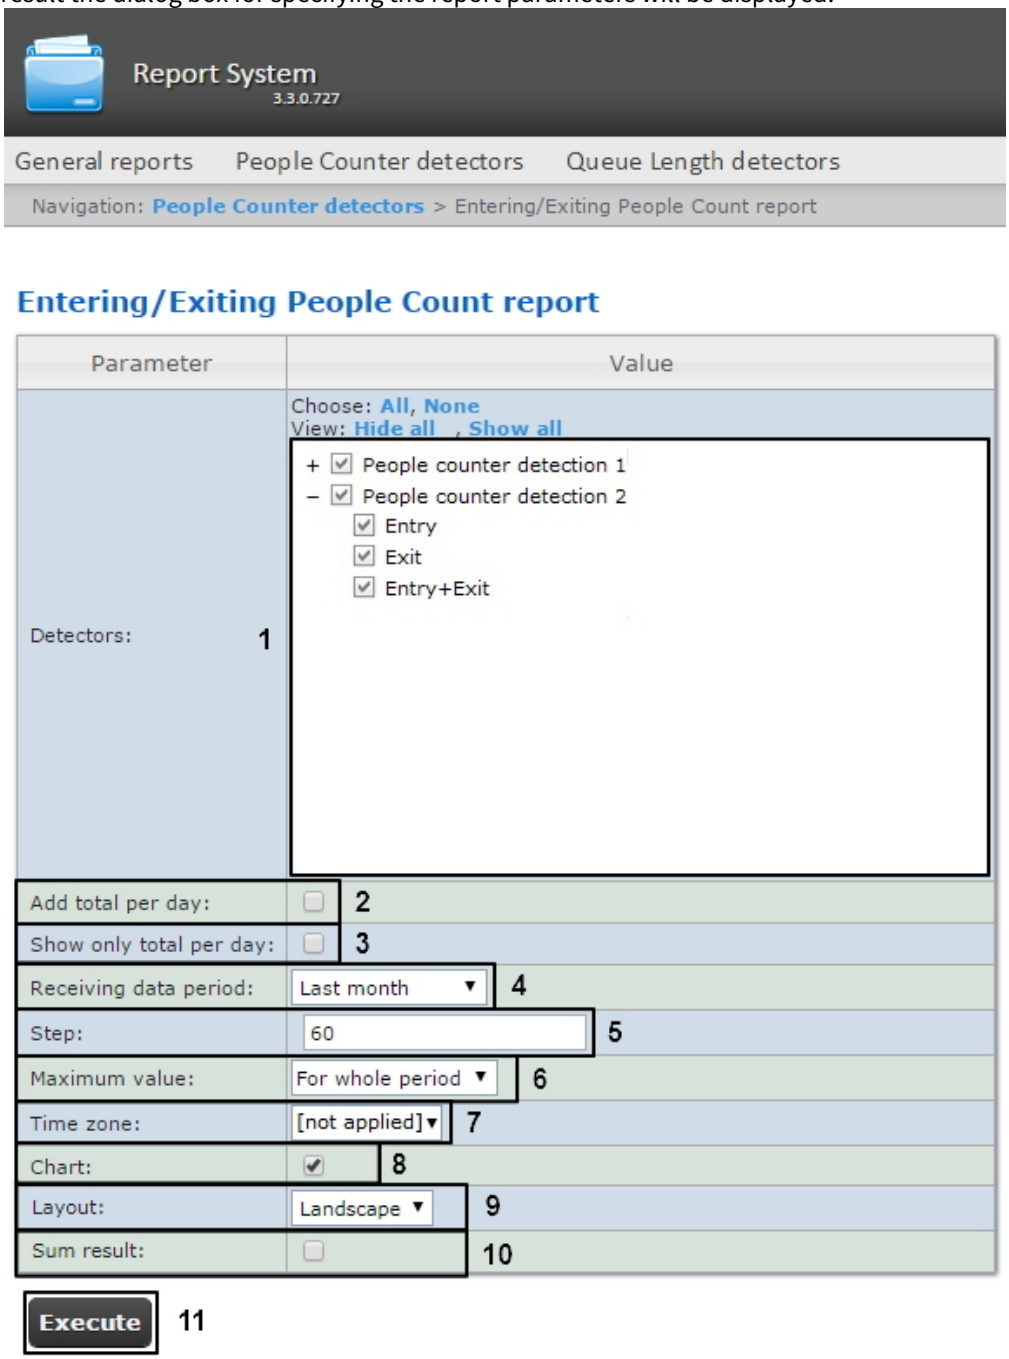
8.5.3 Creating an Entering/Exiting People Count report

The **Entering/Exiting People Count** report allows getting the data about the number of entering/exiting people. The data can be presented as a table and a chart.

Note
The **Entering/Exiting People Count** report is related to the **People Counter detector** (it is necessary to create the corresponding object in the *Intellect* software).

To create an **Entering/Exiting People Count** report, do the following:

1. Select the **Entering/Exiting People Count** report type (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Detectors** field set checkboxes for those **People counter** objects which data should be displayed in the report (**1**). For each detector select a value on which the report is to be created: entry, exit, entry+exit.

      > **Note.**
      > Select the **Entry+Exit** value if the report is to be created on total number of passes.

   b. Set the **Add total per day** checkbox to display the sum of positions per day (**2**).
   c. Set the **Show only total per day** checkbox to dispaly the sum of positions per day taking into account the time filtering (**3**).
   d. Specify the period in the following way:
      i. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**4**).

ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

> **Note**
> To use the **Calendar** tool, click the button near the corresponding field.

iii. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.

iv. If other period type is selected, specifying the date of start and end periods is not needed.

e. Enter a time period (in minutes) during which the values received from people counter detector will be averaged in the **Step** field (**5**). The average values of people amount for the specified interval are displayed in the report.

> **Note**
> If the average value is null the empty report will be displayed for such intervals for the specified period. It is recommended to change the step in this case.

f. In the **Maximum value** field specify a maximum value of people that will be displayed in a chart (**6**).

g. From the **Time zone** drop-down list select time zone by which report is to be created (**7**).

> **Note**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

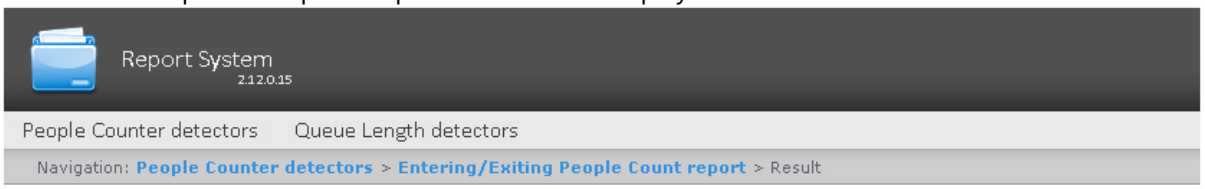
h. If it is necessary to view a report as a chart, set the **Chart** checkbox (**8**).

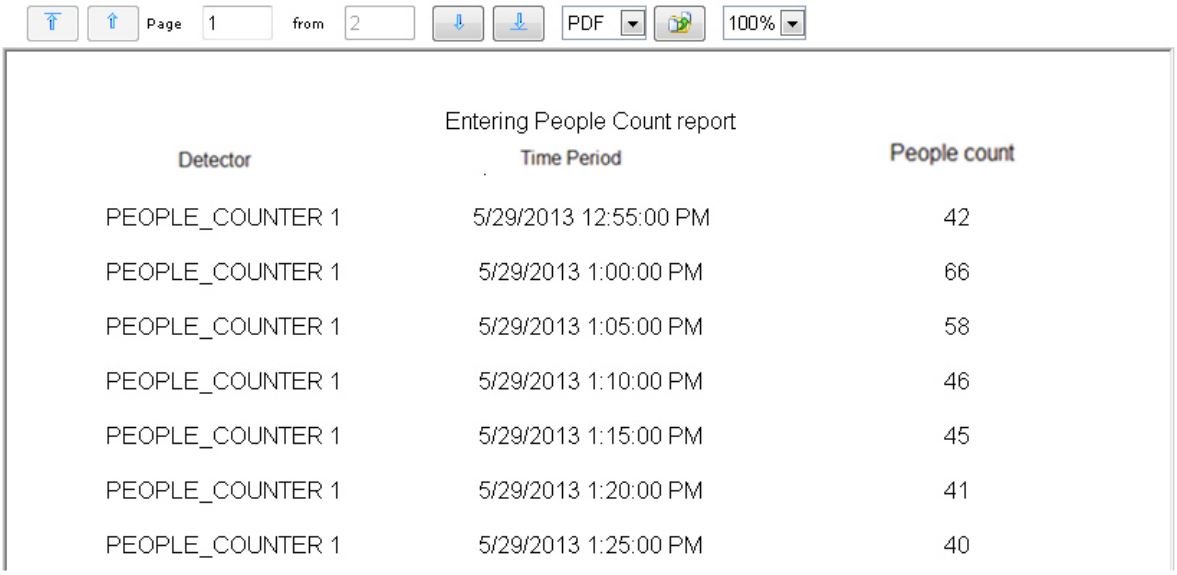
i. In the **Layout** field, select the print layout of the report: **Portrait**, **Landscape** (**9**).

j. Set the **Sum result** checkbox to display sum result by selected detections in the report (**10**).

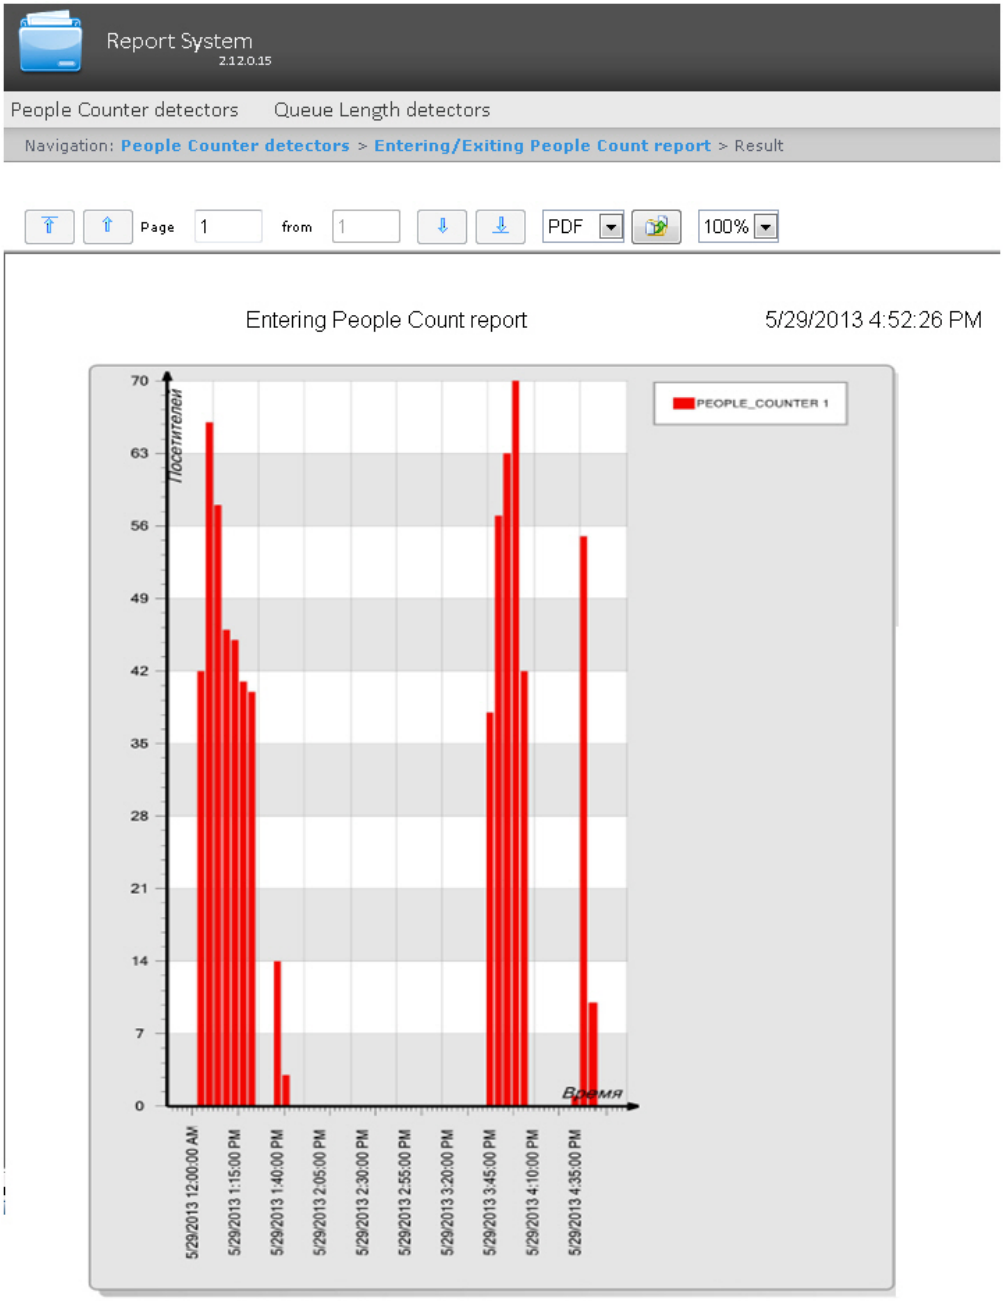
3. To create a report click **Execute** (**11**).

4. As a result the report with specified parameters will be displayed.





The example of the report as a chart is given in the following figure.



Note
Counting the number of entering/exiting people is performed by summing up the "entry"/"exit" events number at each step of the calculations.

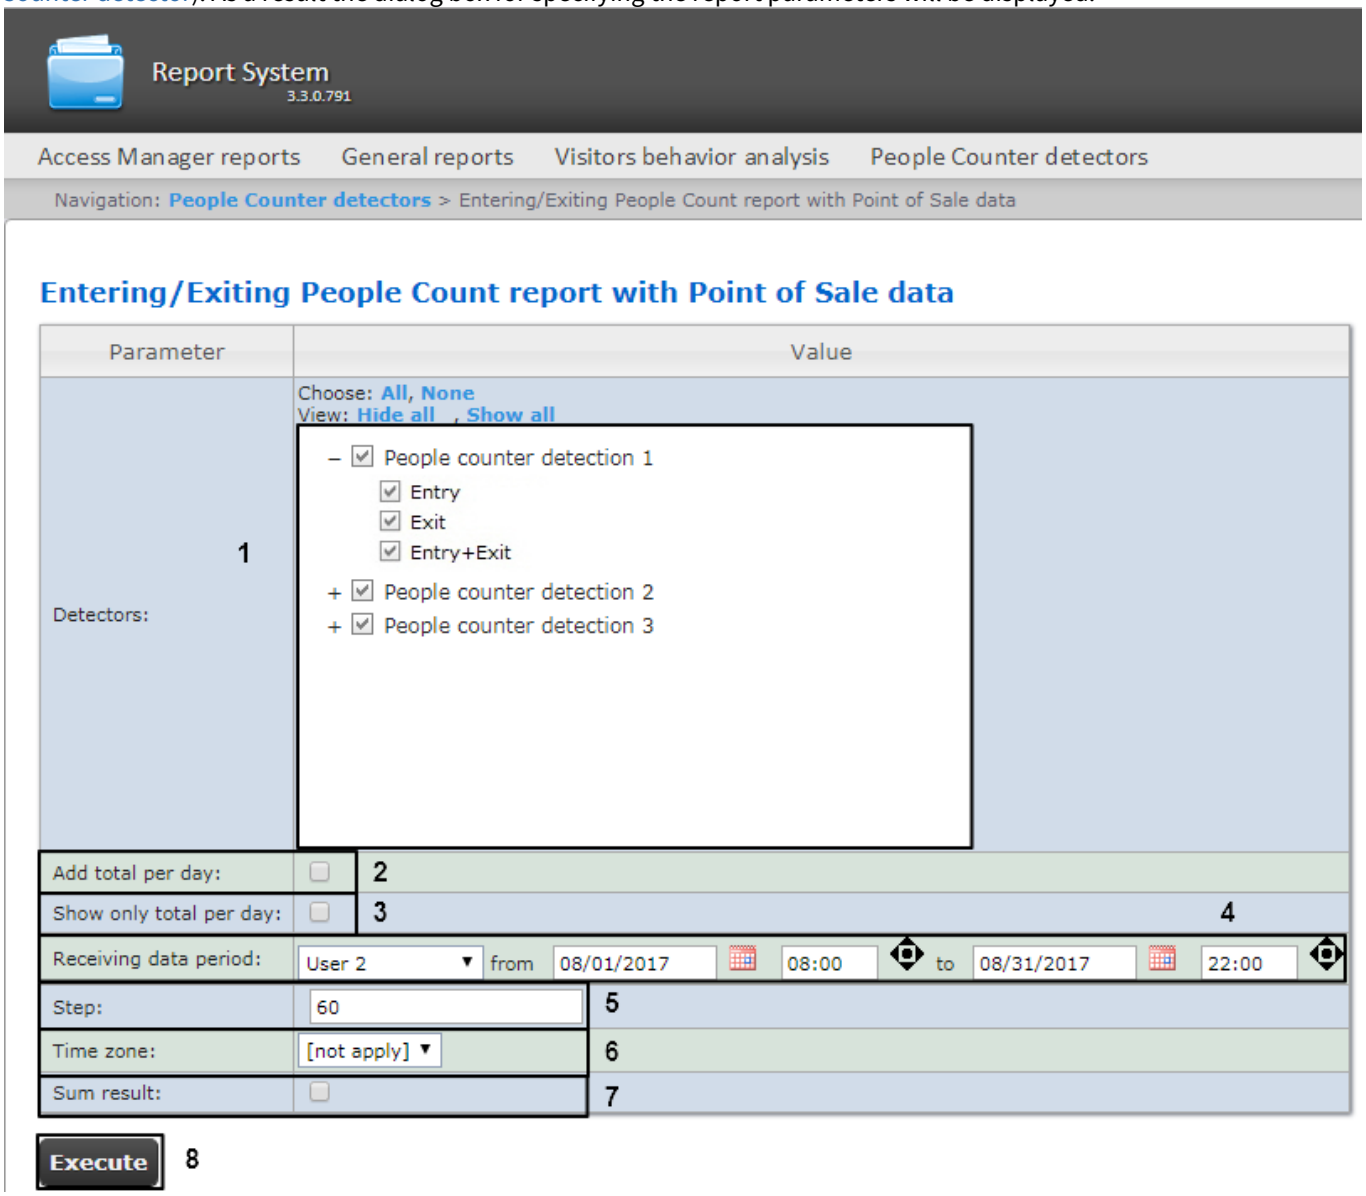
8.5.4 Creating an Entering/Exiting People Count report with Point of Sale data

The **Entering/Exiting People Count report with Point of Sale data** is a variation of the Entering/Exiting People Count report, which, in addition to data on the number of visitors, can provide information about the profits brought by visitors. The data can be presented only as a table.

> **Note**
> The **Entering/Exiting People Count report with Point of Sale data** is related to the **People Counter detector** and the *POS Intelect* software (it is necessary to create the corresponding objects in the *Intellect* software and configure the *POS Intelect* software (for derails, see Administrator's Guide)). The information about the profits brought by visitors is received from the database of the Server which was specified during the POS Intellect installation.

To create an **Entering/Exiting People Count report with Point of Sale data**, do the following:

1. Select the **Entering/Exiting People Count report with Point of Sale data** (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Detectors** field set checkboxes in those **People counter** objects information on which should be displayed in the report (**1**). For each detector select a value on which the report is to be created: entry, exit, entry+exit.

      > **Note.**
      > Select the **Entry+Exit** value if the report is to be created on total number of passes.

   b. Set the **Add total per day** checkbox to display sum of positions per day (**2**).
   c. Set the **Show only total per day** to dispaly the sum of positions per day taking into account the time filtering (**3**).
   d. Specify the period in the following way:

i. From the **Receiving data period:** drop-down list select the time period for which the report is to be created (**4**).
ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

> **Note**
> Click the button near the corresponding field to use the **Calendar** tool.

iii. If the **User defined 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
iv. If another period type is selected, specifying the date of start and end periods is not needed.

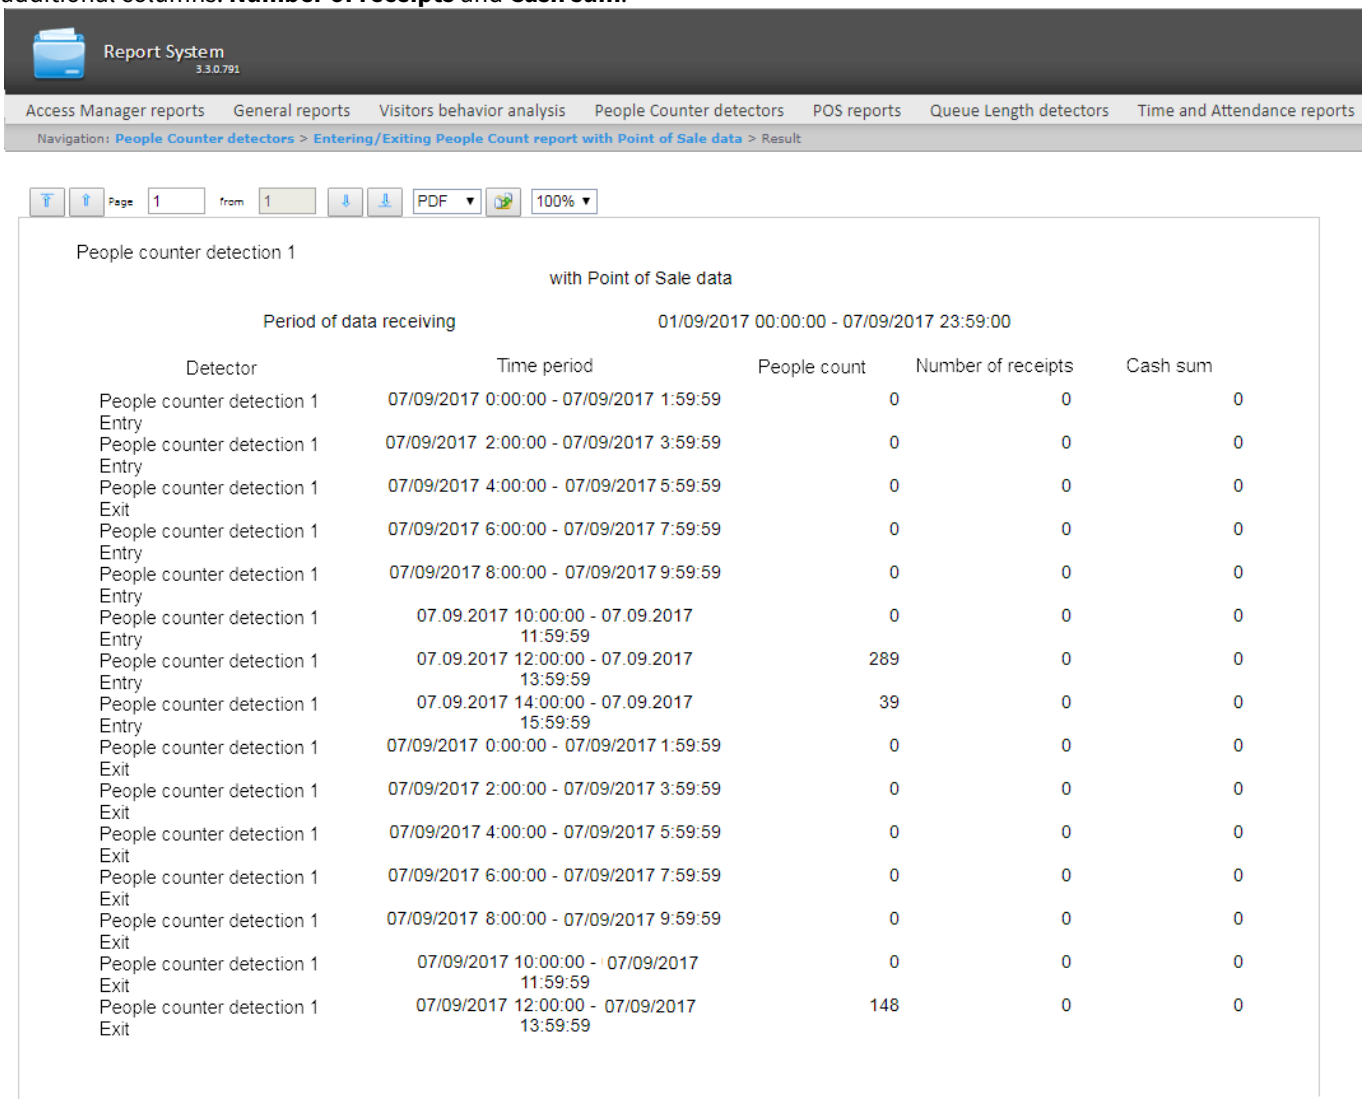
e. Enter a time period (in minutes) during which the values received from people counter detector will be summarized in the **Step** field (**5**).
f. From the **Time zone** drop-down list select time zone by which report is to be created (**6**).

> **Note.**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

g. Set the **Sum result** checkbox to display sum result by selected detections in the report (**7**).

3. To create a report click **Execute** (**8**).

4. As a result an **Entering/Exiting People Counter report** with specified parameters will be displayed, containing two additional columns: **Number of receipts** and **Cash sum**.



Detector	Time period	People count	Number of receipts	Cash sum
People counter detection 1 Entry	07/09/2017 0:00:00 - 07/09/2017 1:59:59	0	0	0
People counter detection 1 Entry	07/09/2017 2:00:00 - 07/09/2017 3:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 4:00:00 - 07/09/2017 5:59:59	0	0	0
People counter detection 1 Entry	07/09/2017 6:00:00 - 07/09/2017 7:59:59	0	0	0
People counter detection 1 Entry	07/09/2017 8:00:00 - 07/09/2017 9:59:59	0	0	0
People counter detection 1 Entry	07.09.2017 10:00:00 - 07.09.2017 11:59:59	0	0	0
People counter detection 1 Entry	07.09.2017 12:00:00 - 07.09.2017 13:59:59	289	0	0
People counter detection 1 Entry	07.09.2017 14:00:00 - 07.09.2017 15:59:59	39	0	0
People counter detection 1 Exit	07/09/2017 0:00:00 - 07/09/2017 1:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 2:00:00 - 07/09/2017 3:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 4:00:00 - 07/09/2017 5:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 6:00:00 - 07/09/2017 7:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 8:00:00 - 07/09/2017 9:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 10:00:00 - 07/09/2017 11:59:59	0	0	0
People counter detection 1 Exit	07/09/2017 12:00:00 - 07/09/2017 13:59:59	148	0	0

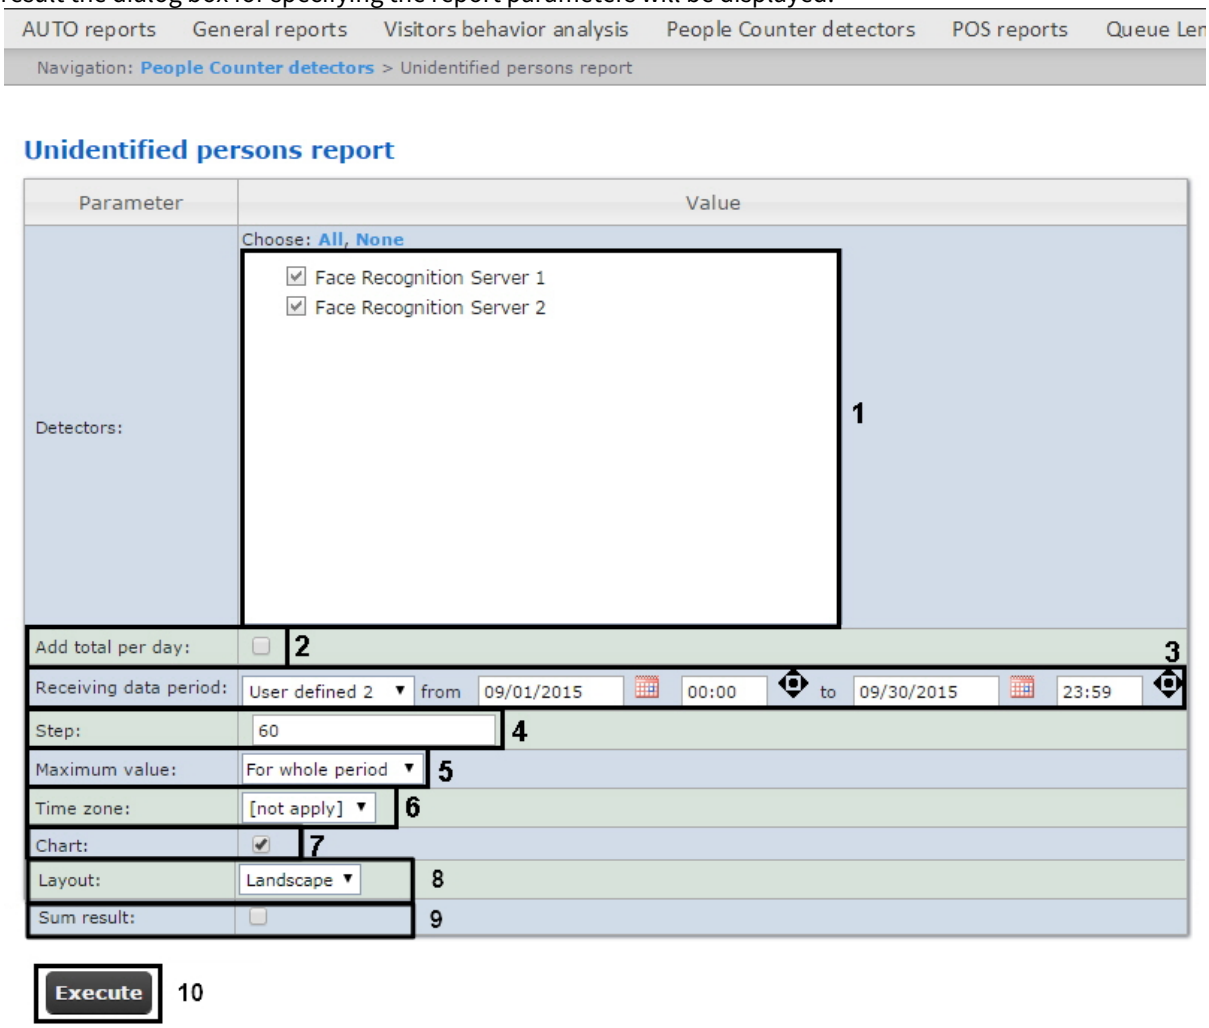
8.5.5 Creating a Face counter report (detailed by servers)

The **Face counter report (detailed by servers)** allows getting data about the number of captured faces (people/persons) using the data from the face recognition servers. The data can be presented as a table and a chart.

> **Note**
> The **Face counter report (detailed by servers)** is related to the **Face Recognition Server** object (it is necessary to create the corresponding object in the *Intellect* software).

To create the **Face counter report (detailed by servers)**, do the following:

1. Select the **Face counter report (detailed by servers)** (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Detectors** field set checkboxes in those **Face Recognition Server** objects information on which should be displayed in the report (**1**).
   b. Set the **Add total per day** checkbox to display sum of positions per day (**2**).
   c. Specify the period in the following way:
      i. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**3**).
      ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

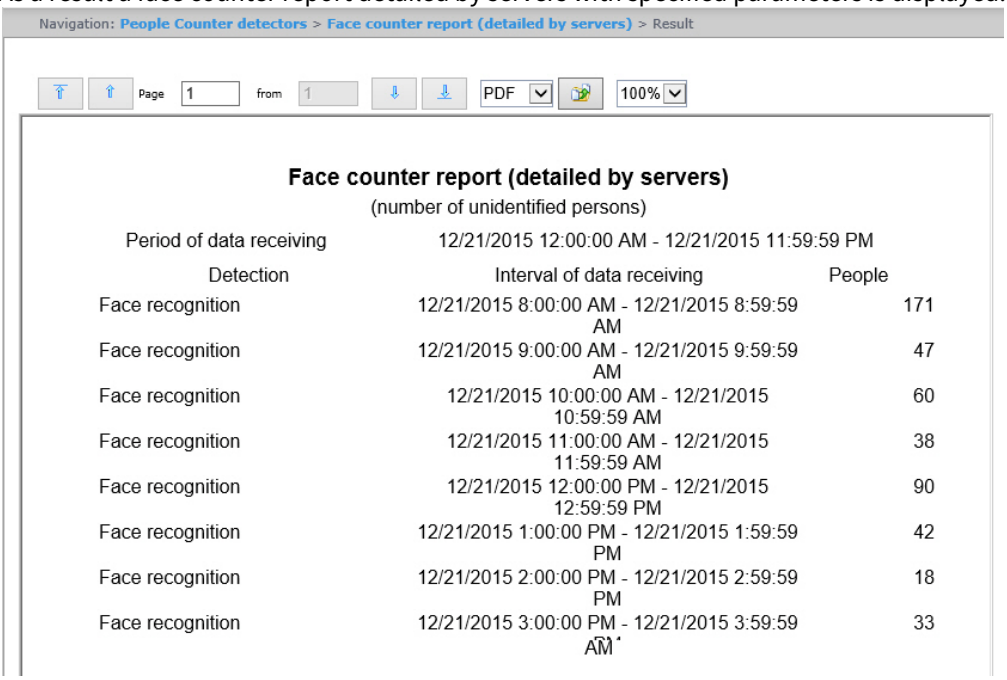
> **Note**
>
> Click the button near the corresponding field to use the **Calendar** tool.

      iii. If the **User defined 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
      iv. If another period type is selected, specifying the date of start and end periods is not needed.
   d. Enter a time period (in minutes) during which the values received from people counter detector will be summarized in the **Step** field (**4**).
   e. From the **Maximum value** drop-down list select a maximum value of people that will be displayed in a chart (**5**).
   f. From the **Time zone** drop-down list select time zone by which report is to be created (**6**).

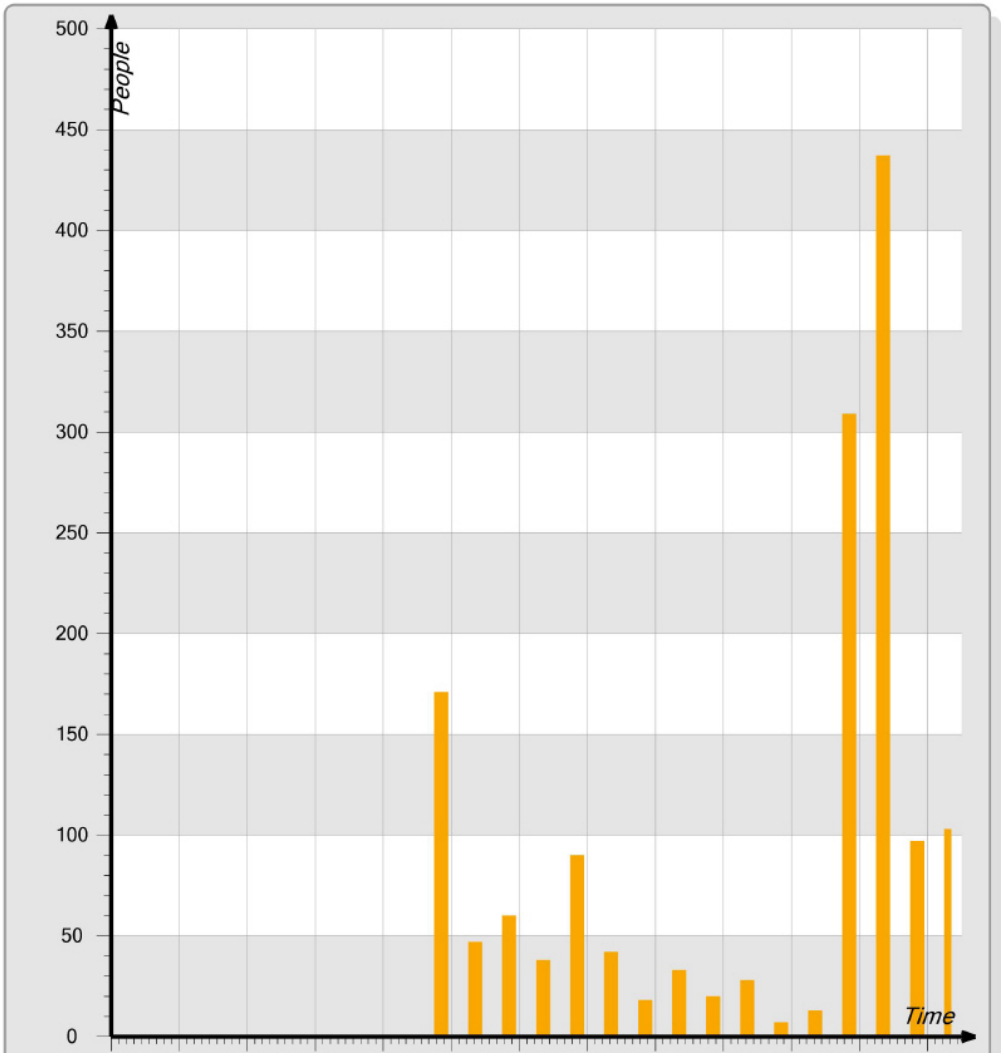
> **Note.**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

g. If it is necessary to view a report as a chart, set the corresponding checkbox (**7**).
h. In the **Layout** field, select the print layout of the report: **Portrait**, **Landscape** (**8**).
i. Set the **Sum results** checkbox to display sum result by selected detections in the report (**9**).

3. To create a report click **Execute** (**10**).
4. As a result a face counter report detailed by servers with specified parameters is displayed.

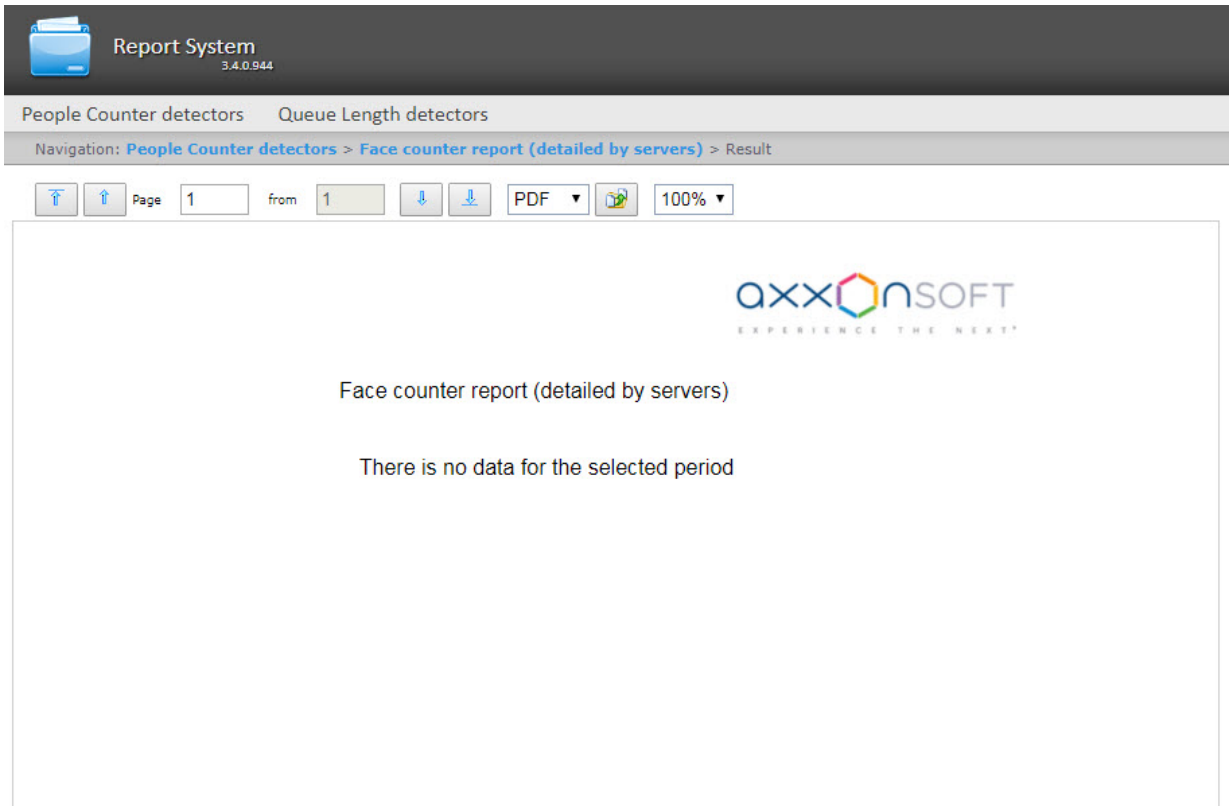


Example of a face counter report detailed by servers as a chart is given in the following figure.



Note
The number of people (persons) in the report means the number of captured faces, not the number of unique visitors.

If there is no data for specified time period, the report will be displayed as in the following figure.



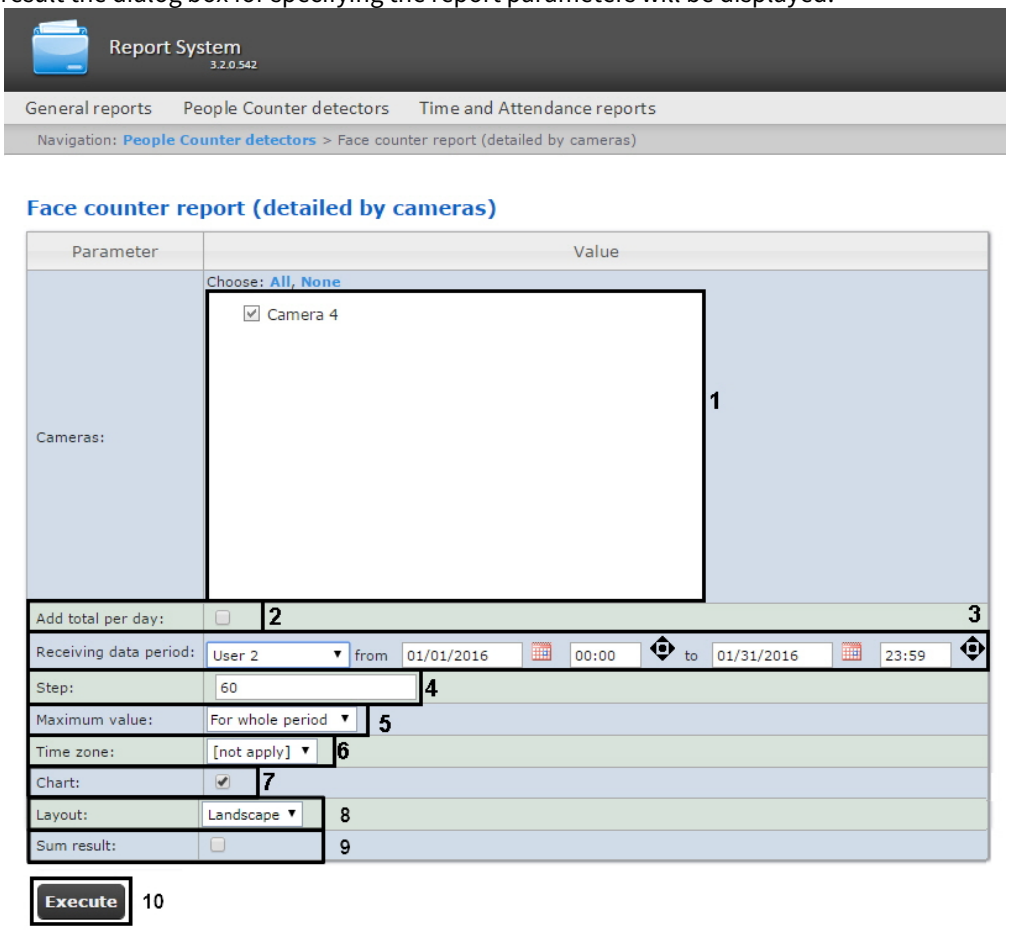
8.5.6 Creating a Face counter report (detailed by cameras)

The **Face counter report (detailed by cameras)** allows getting data about the number of captured faces (people/persons) using data from the video cameras. The data can be presented as a table and a chart.

> **Note**
> The **Face counter report (detailed by cameras)** is related to the **Camera** object (it is necessary to create the corresponding object in the *Intellect* software).

To create the **Face counter report (detailed by cameras)**, do the following:

1. Select the **Face counter report (detailed by cameras)** (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **Cameras** field set checkboxes for those **Camera** objects, the information on which should be displayed in the report (**1**).
   b. Set the **Add total per day** checkbox to display sum of positions per day (**2**).
   c. Specify the period in the following way:
      i. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**3**).
      ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

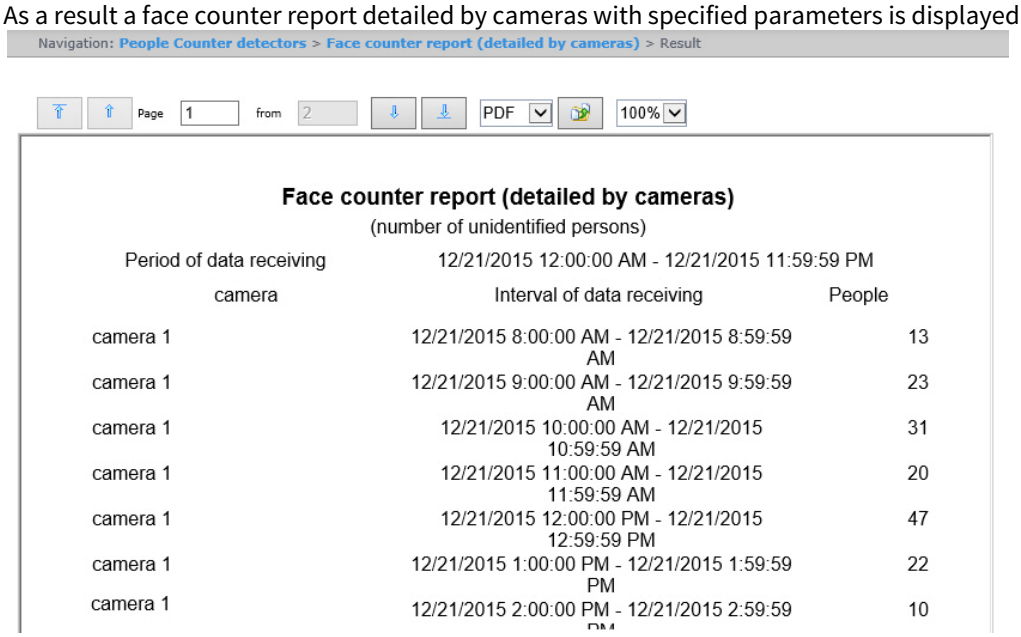
> **Note**
>
> Click the button near the corresponding field to use the **Calendar** tool.

      iii. If the **User defined 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
      iv. If another period type is selected, specifying the date of start and end periods is not needed.
   d. Enter a time period (in minutes) during which the values received from people counter detector will be summarized in the **Step** field (**4**).
   e. From the **Maximum value** drop-down list select a maximum value of people that will be displayed in a chart (**5**).
   f. From the **Time zone** drop-down list select time zone by which report is to be created (**6**).

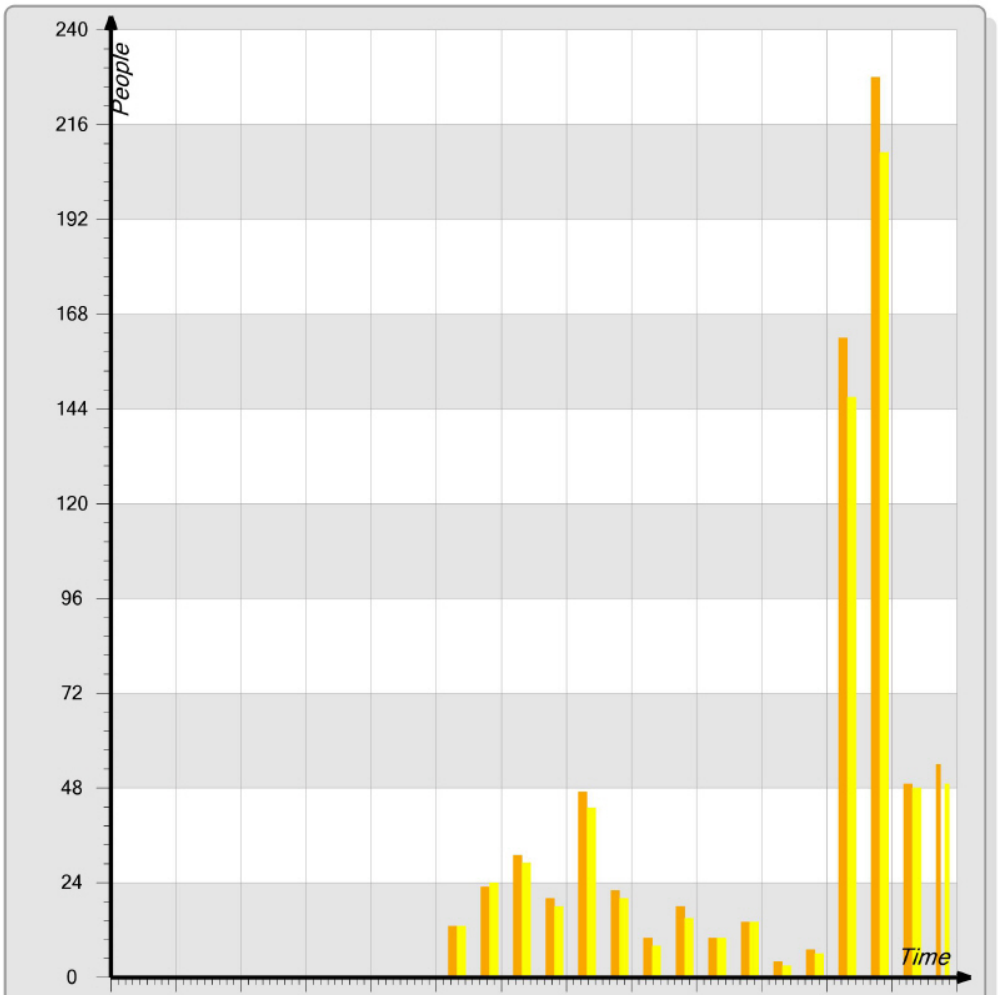
> **Note**
> Time zones created in the *Intellect* software package which have only one time period and haven't got any inclusions are available to select. Selection of week days is not performed. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

g. If it is necessary to view a report as a chart, set the corresponding checkbox (**7**).
h. In the **Layout** field, select the print layout of the report: **Portrait**, **Landscape** (**8**).
i. Set the **Sum result** checkbox to display sum result by selected detections in the report (**9**).

3. To create a report click **Execute** (**10**).
4. As a result a face counter report detailed by cameras with specified parameters is displayed.



5. Example of a face counter report detailed by cameras as a chart is given in the following figure.



Note
The number of people (persons) in the report means the number of captured faces, not the number of unique visitors.

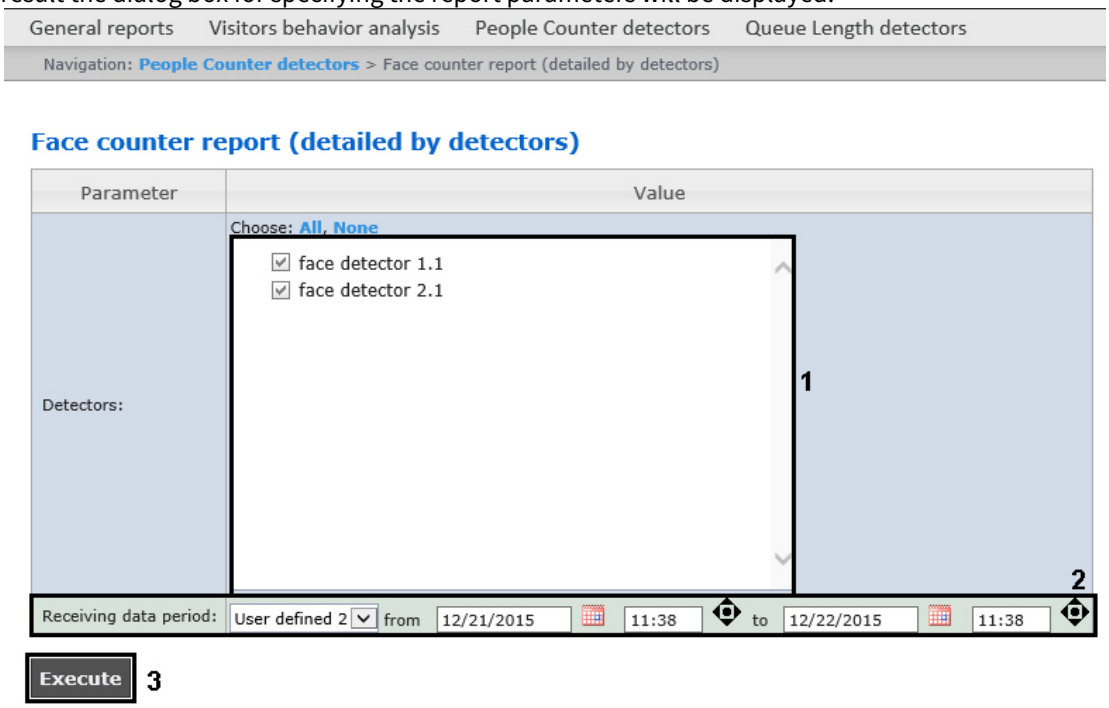
8.5.7 Creating a Face counter report (detailed by detectors)

The **Face counter report (detailed by detectors)** allows getting the data about the number of captured faces (people/persons) using the data from the face detectors. The data can be presented only as a table.

Note
The **Face counter report (detailed by detectors)** is related to the **Face detector** object (it is necessary to create the corresponding object in the *Intellect* software).

To create the **Face counter report (detailed by detectors)**, do the following:

1. Select the **Face counter report (detailed by detectors)** (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.



2. Set the following report parameters:
   a. In the **Detectors** field set checkboxes in those **Face detectors** objects information on which should be displayed in the report (**1**).
   b. Specify the period in the following way:
      i. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**2**).
      ii. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

> **Note**
> Click the button near the corresponding field to use the **Calendar** tool.

      iii. If the **User defined 2** period is selected, enter additionaly the time of start and end periods for which the report is to be created using the button.
      iv. If another period type is selected, specifying the date of start and end periods is not needed.
3. To create a report click **Execute** (**3**).
4. As a result a face counter report detailed by detectors with specified parameters is displayed.

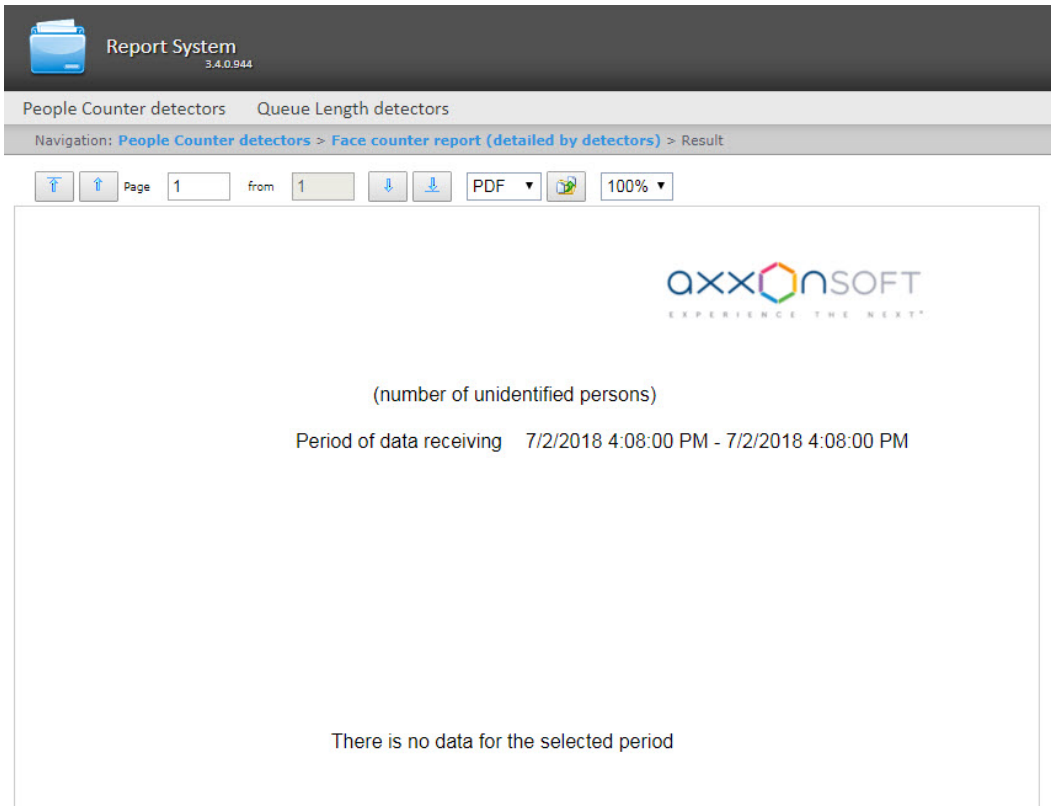
Face counter report (detailed by detectors)

(number of unidentified persons)

Period of data receiving	12/21/2015 11:38:00 AM - 12/22/2015 11:38:00 AM	
Detection	Interval of data receiving	People
face detector 1.1	12/21/2015 11:38:00 AM - 12/22/2015 11:37:59 AM	663
face detector 2.1	12/21/2015 11:38:00 AM - 12/22/2015 11:37:59 AM	605

> **Note**
> The number of people (persons) in the report means the number of captured faces, not the number of unique visitors.

If there is no data for specified time period, the report will be displayed as in the following figure.



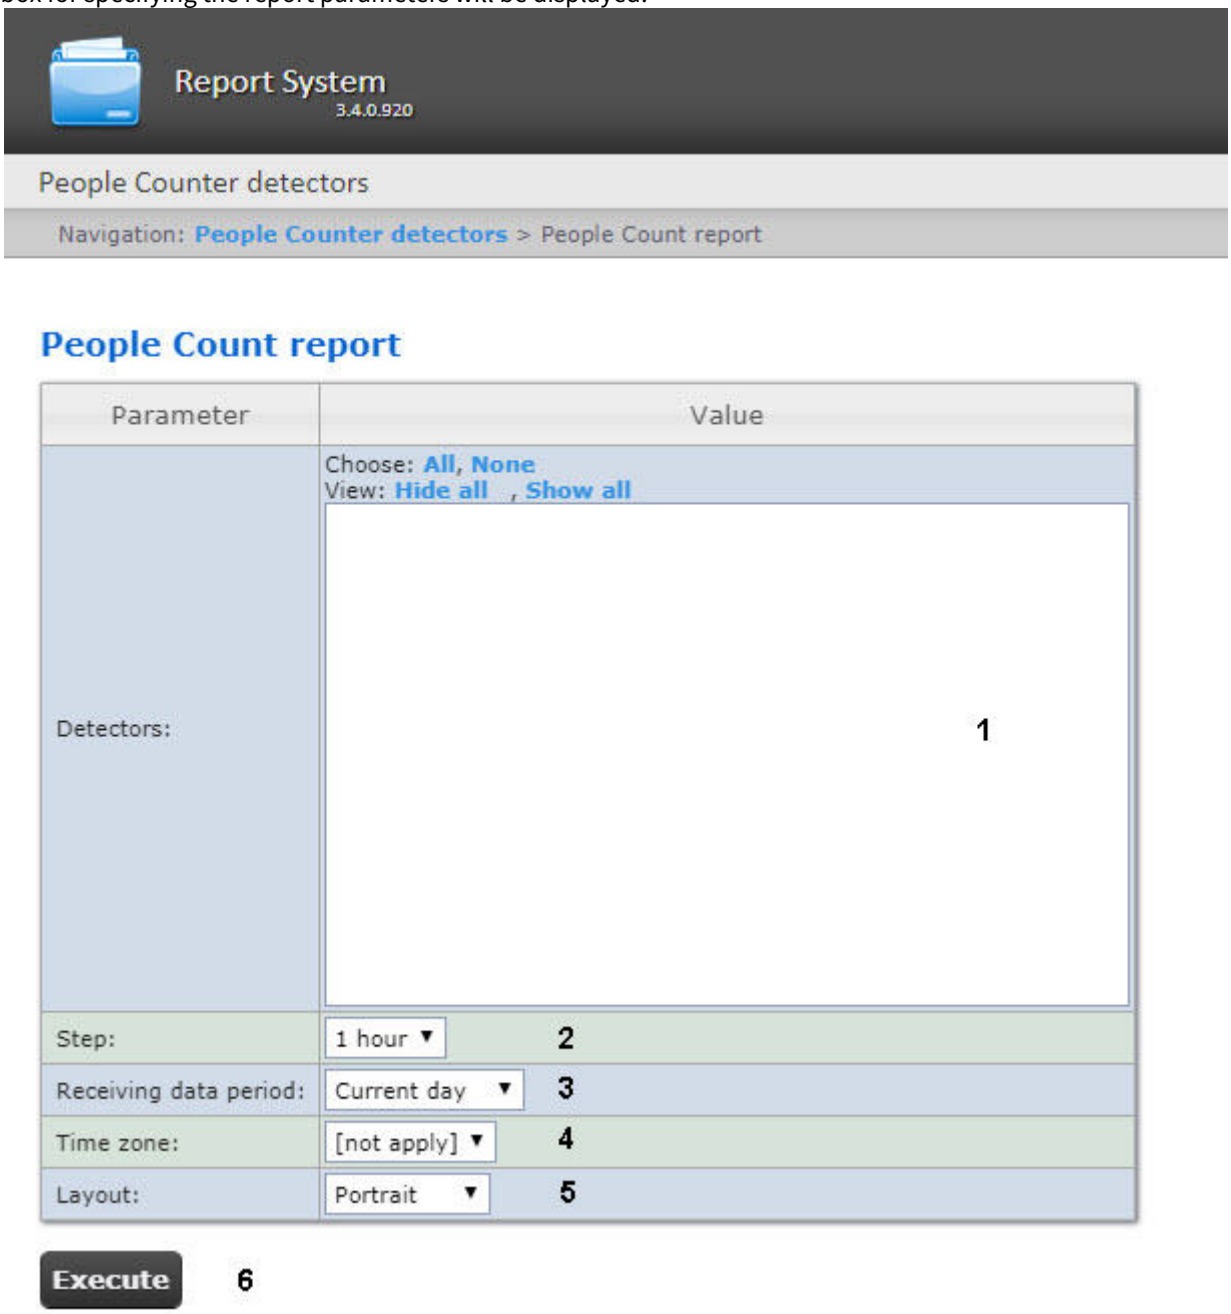
8.5.8 Creating a People Count report

The **People Count** report allows getting the data about the number of entering people. The data can be presented only as a chart.

> **Note**
> The **People Count** report is related to the **People Counter detector** (it is necessary to create the corresponding object in the *Intellect* software).

To create a **People Count** report, do the following:

1. Select the **People Count** report type (see Selecting a type of reports by People Counter detector). As a result the dialog box for specifying the report parameters will be displayed.

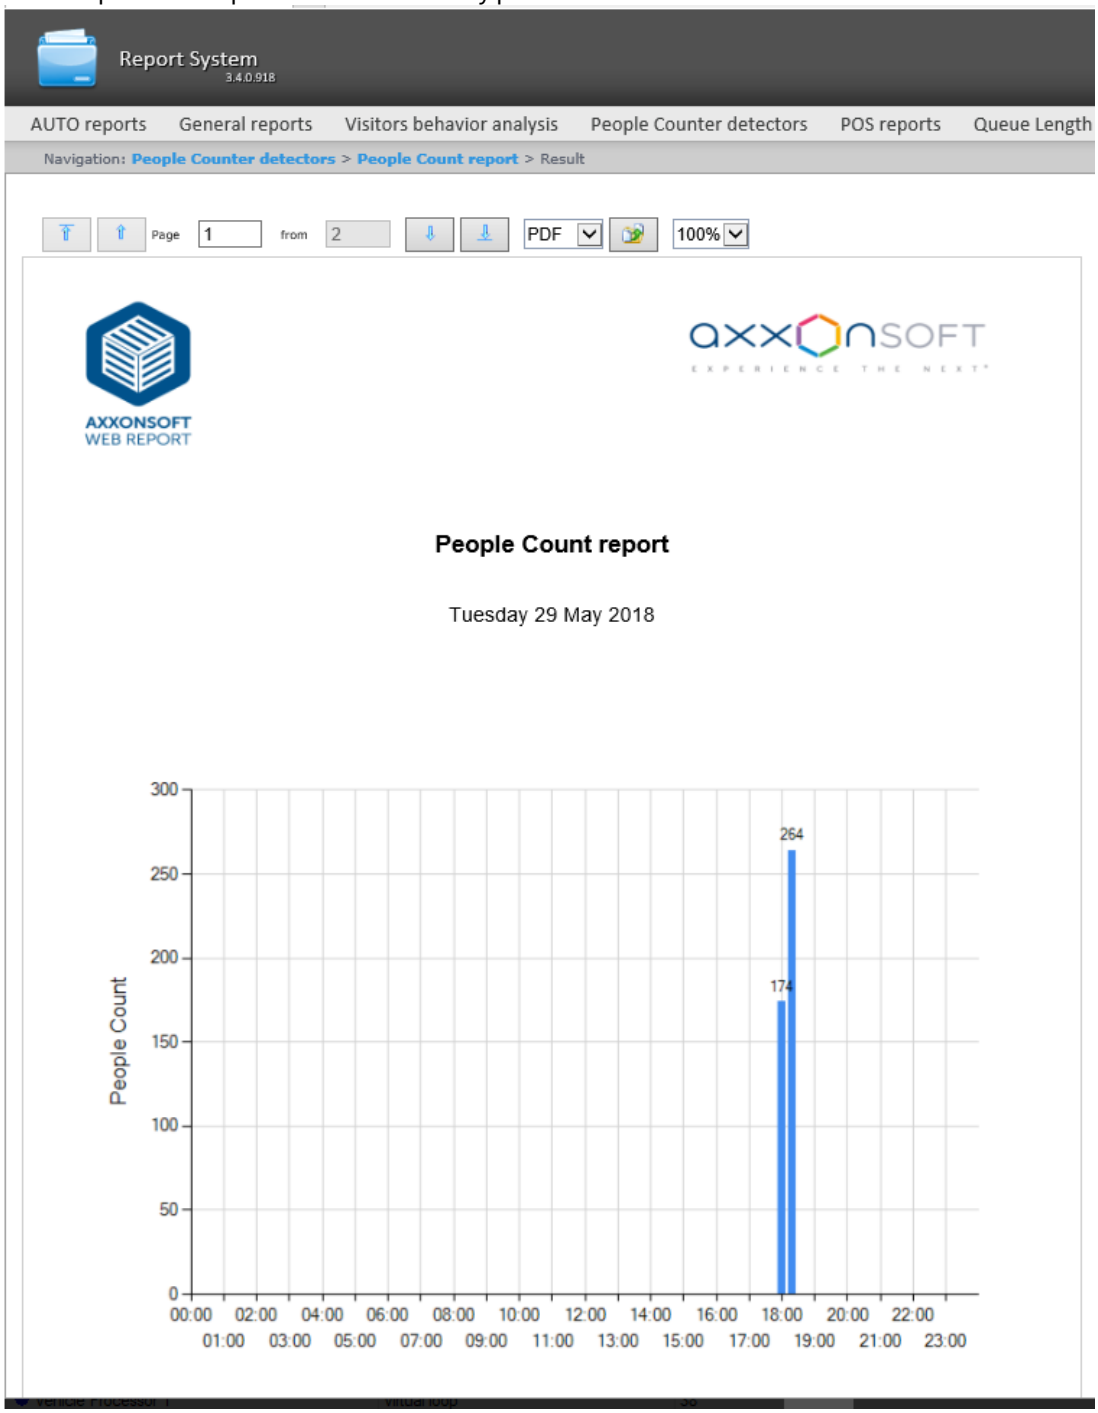


2. Set the report parameters in the following way:
   a. In the **Detectors** field set checkboxes for those **People counter** objects which data should be displayed in the report (**1**).
   b. From the **Step** drop-down list (**2**) select the time period during which the values received from people counter detector will be summed (depends on the **Receiving data period** parameter, see 2.c). The average values of people amount for the specified interval are displayed in the report.
   c. From the **Receiving data period** drop-down list select the time period for which the report is to be created (**3**).
   d. From the **Time zone** drop-down list (**4**) select the time zone for which the report is to be displayed.

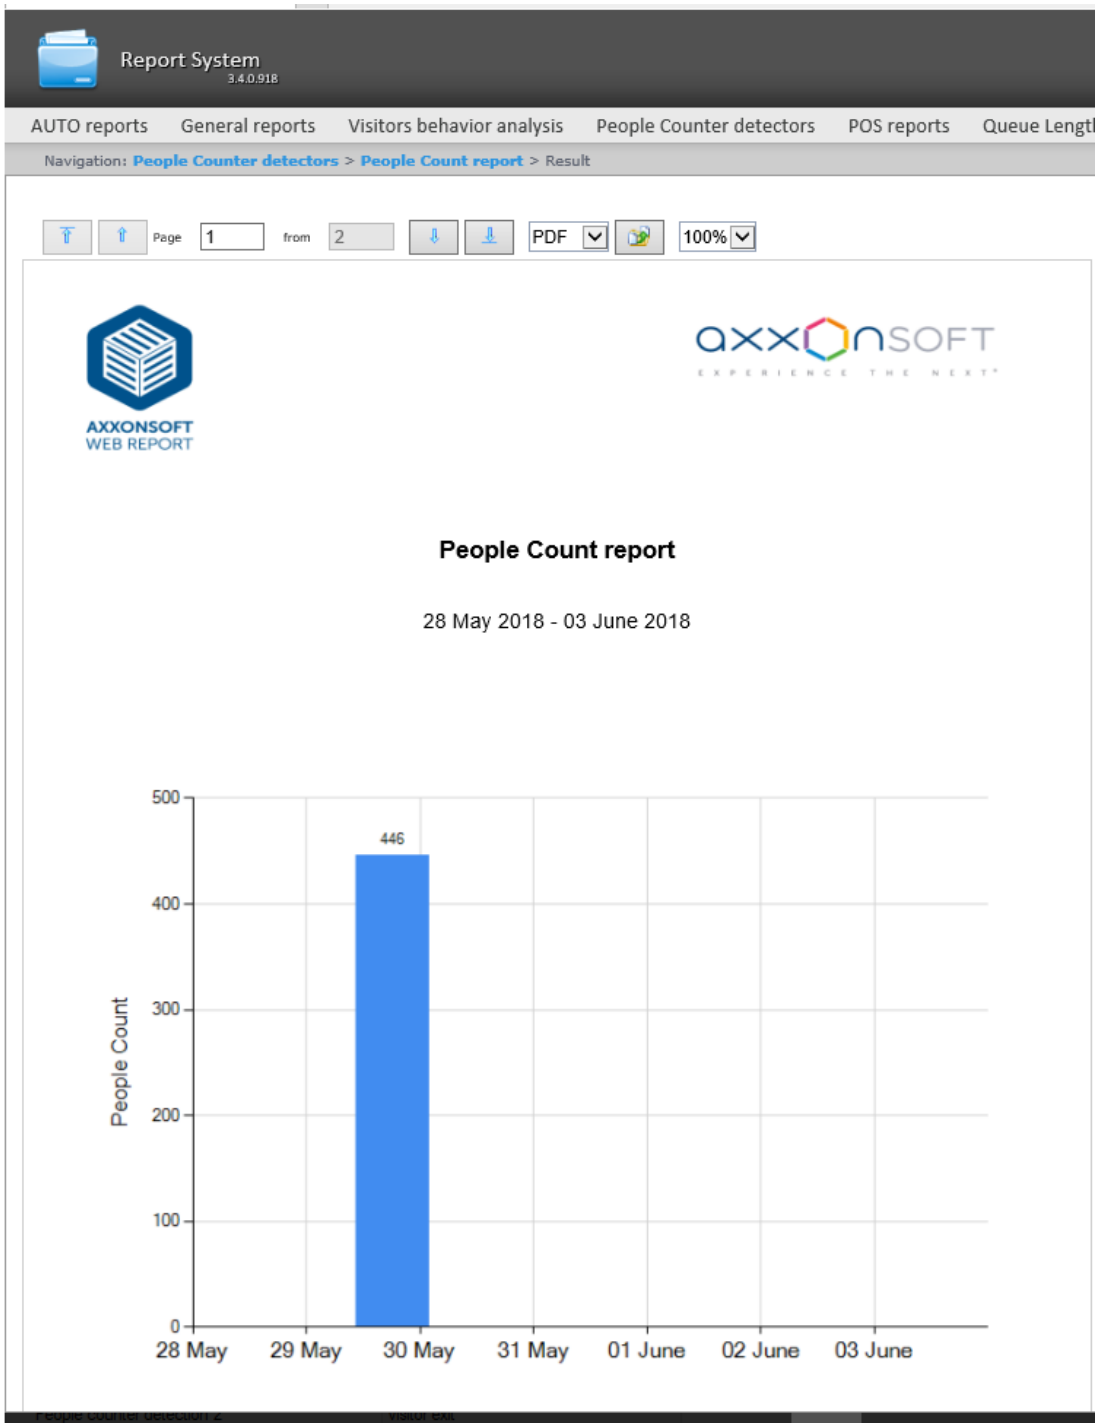
> **Note**
> You can select the time zones created in the *Intellect* which have only one time period and haven't got any inclusions. Week days can not be selected. Detailed information about creation and using of time zones is presented in the Creating and using time zones section.

e. In the **Layout** field, select the print layout of the report: **Portrait**, **Landscape** (**5**).

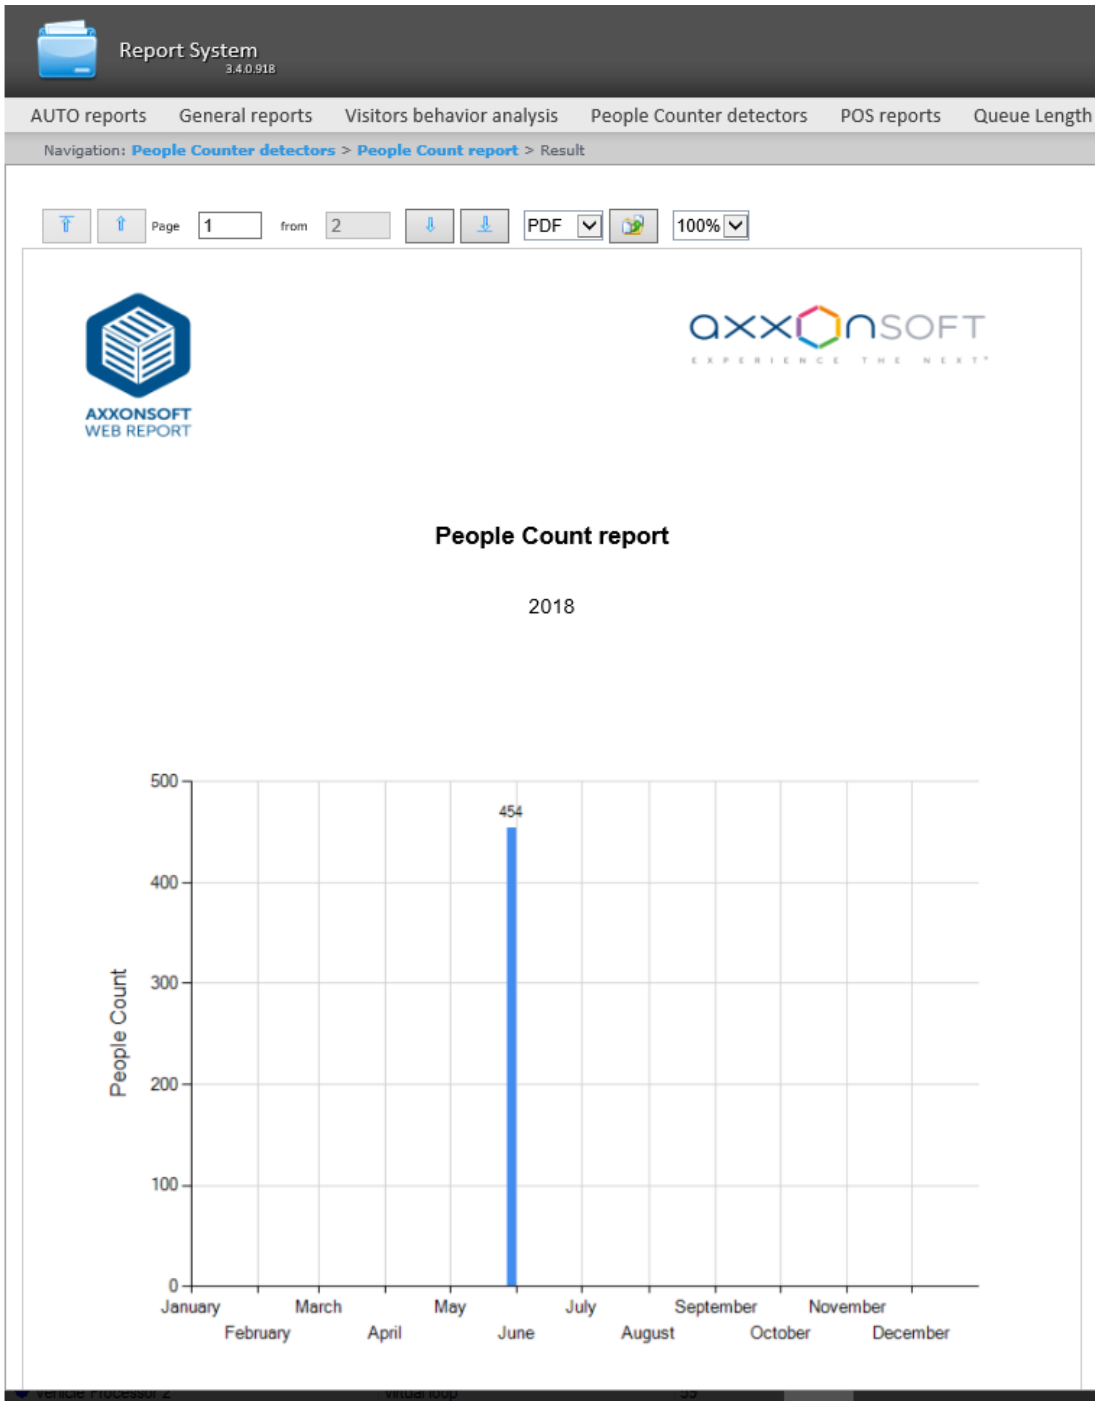
3. To create a report click **Execute** (**6**).
   As a result the report with specified parameters will be displayed.
   The example of the report for the current day period.



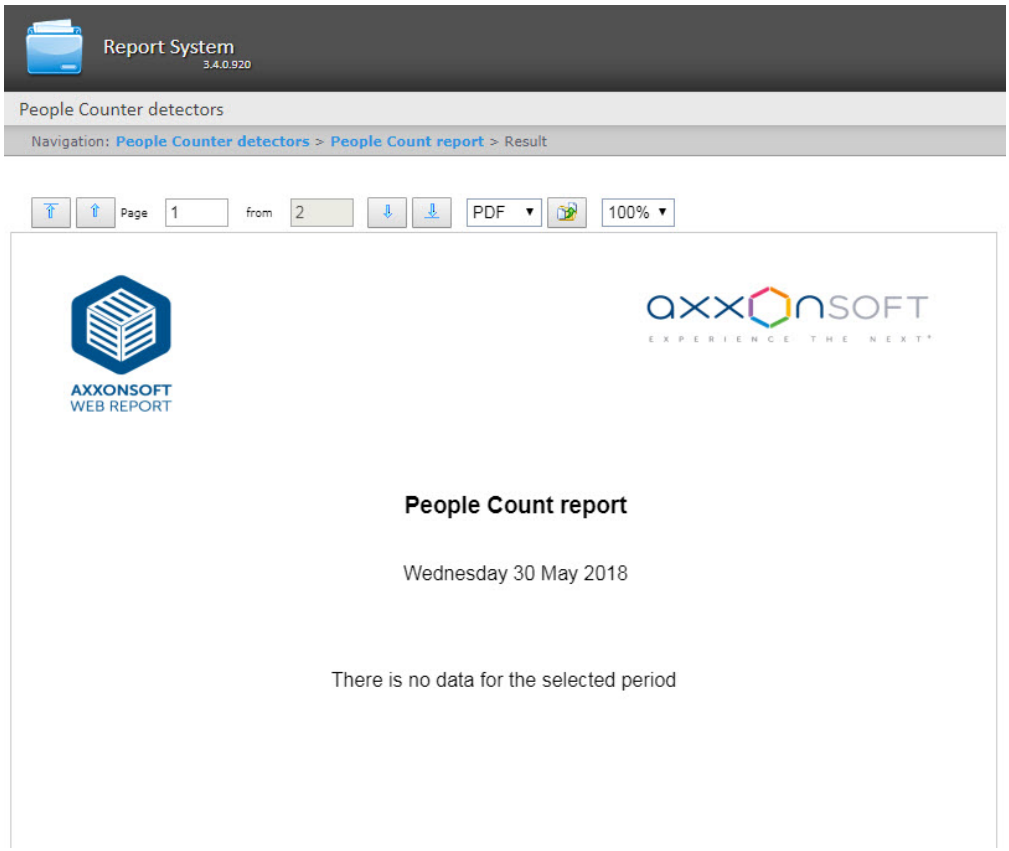
The example of the report for the current week period.



The example of the report for the current year period.



The example of the report if there was no entering people for the specified time period.

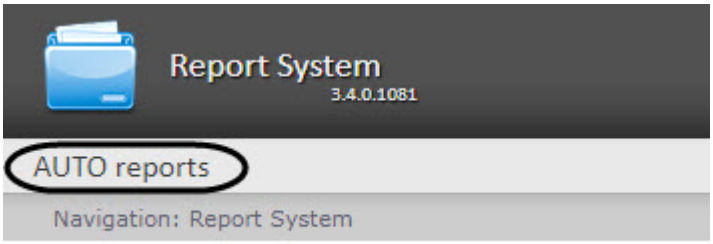


8.6 Working with AUTO reports

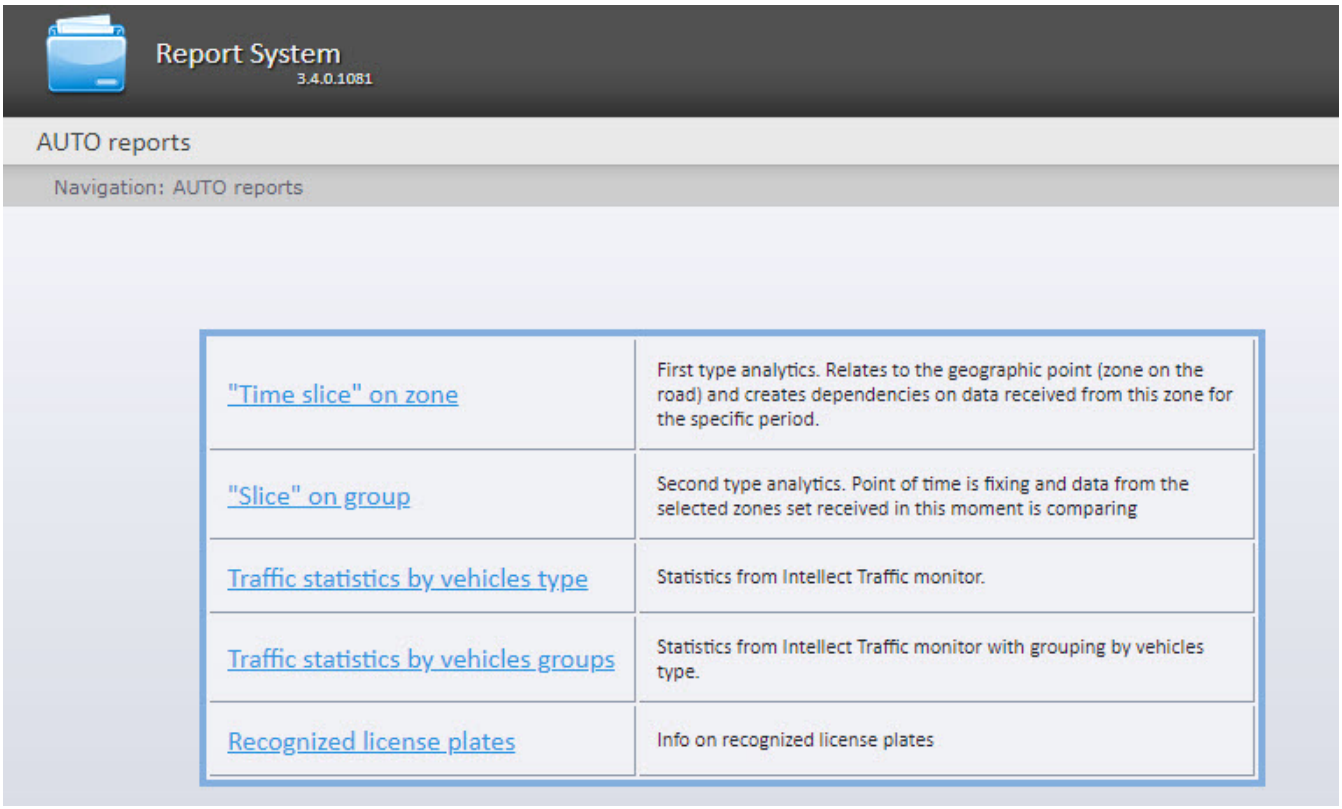
Working with AUTO reports consists of selecting the necessary report type and creating a report. You can find the description of each report type on the corresponding page.

8.6.1 Selecting the type of Auto report

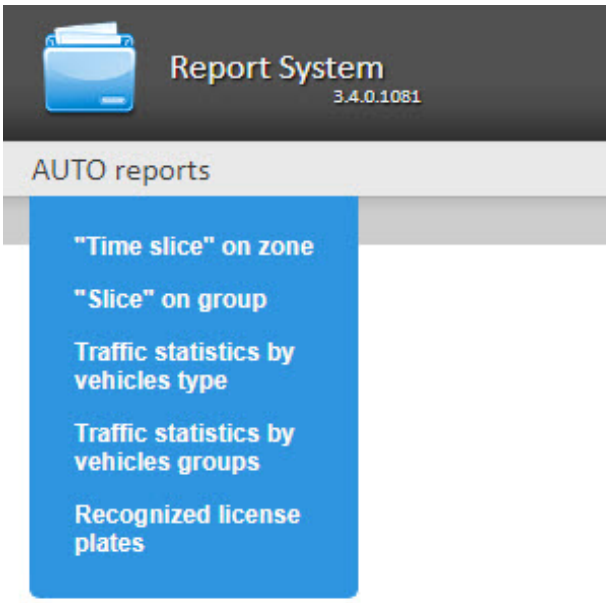
To select the type of Auto report click **AUTO reports** link in the report menu of *Intellect Web Report System.*



As a result the list of available Auto reports is displayed. For switching to the required report click the corresponding link.



List of links for switching to Auto reports is also available when hovering over the **AUTO reports** link in the report menu.



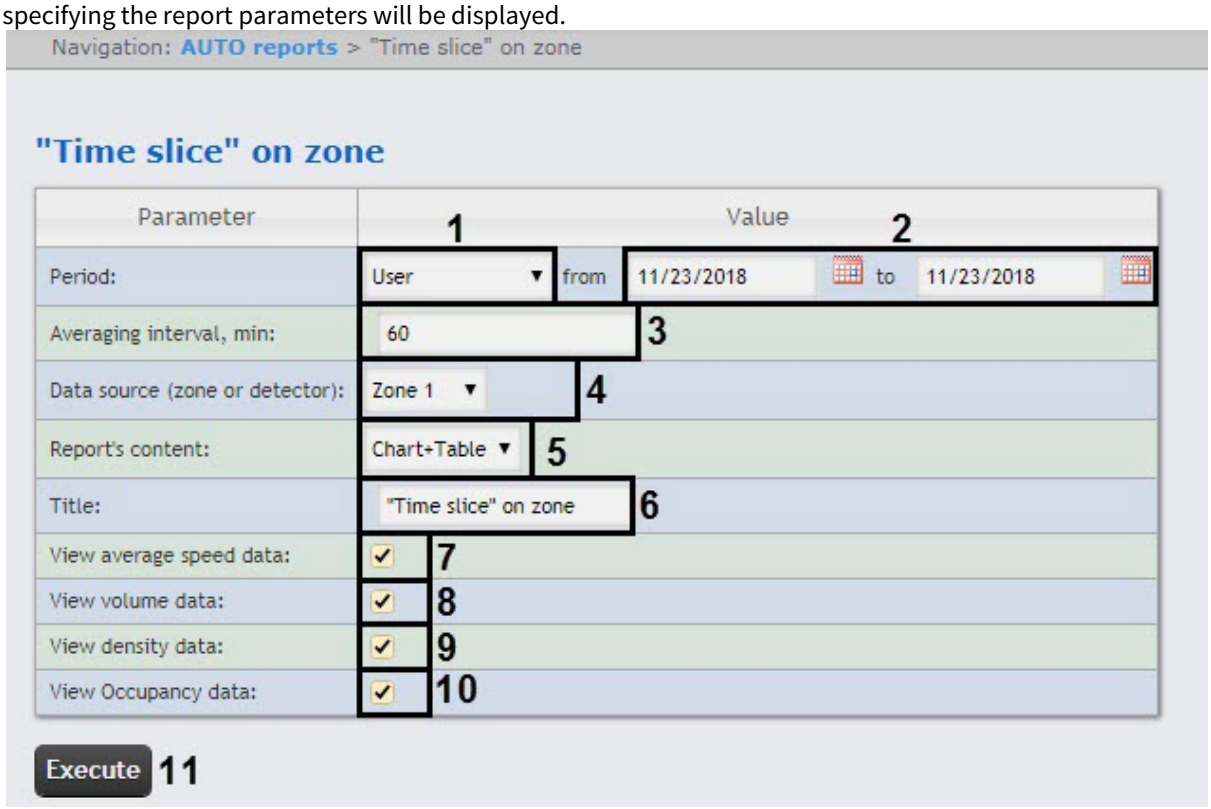
8.6.2 "Time slice" on zone

The **"Time slice" on zone** report allows getting data about the vehicles average speed, the traffic range and density, and the specified lane occupation in the selected time period. Time period is specified within the accuracy of a day. The report data can be presented as a table and a chart.

> **Note**
> The **"Time slice" on zone** report is related to the **Vehicle detector** and **Vehicle processor** modules (it is necessary to create the corresponding object in the *Intellect* software).

To create the **"Time slice" on zone** report, do the following:

1. Select the **"Time slice" on zone** report type (see Selecting the type of Auto report). As a result the dialog box for specifying the report parameters will be displayed.



2. Specify the report parameters in the following way:
   a. From the **Period** drop-down list select the time period for which the report is to be created (**1**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool (**2**). Click the button near the corresponding field to use the **Calendar** tool.

   c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.

> **Note**
> If **User defined** or **User defined 2** period is selected, the report will be created strictly in the user-defined range of dates. This means that if you select a period from January 1st till January 5th and make the report auto-generated (see Setting up Intellect Web Report System operation in the automatic mode), the system will periodically generate reports with one and the same data set for the period from January 1st till January 5th and send them by email.
> However, it is possible to specify only the time for **User defined 2**, not specifying the date. In this case, the system will automatically generate reports for the specified period of thime of the previous day.

d. In the **Averaging interval, min** enter the time period corresponding to the interval in which points on the chart and values in the table will follow (**3**). The average values for the specified averaging interval are displayed in the report.

> **Note.**
> If the average value is null the empty report will be displayed for such intervals for the specified period. It is recommended to change the interval in this case.

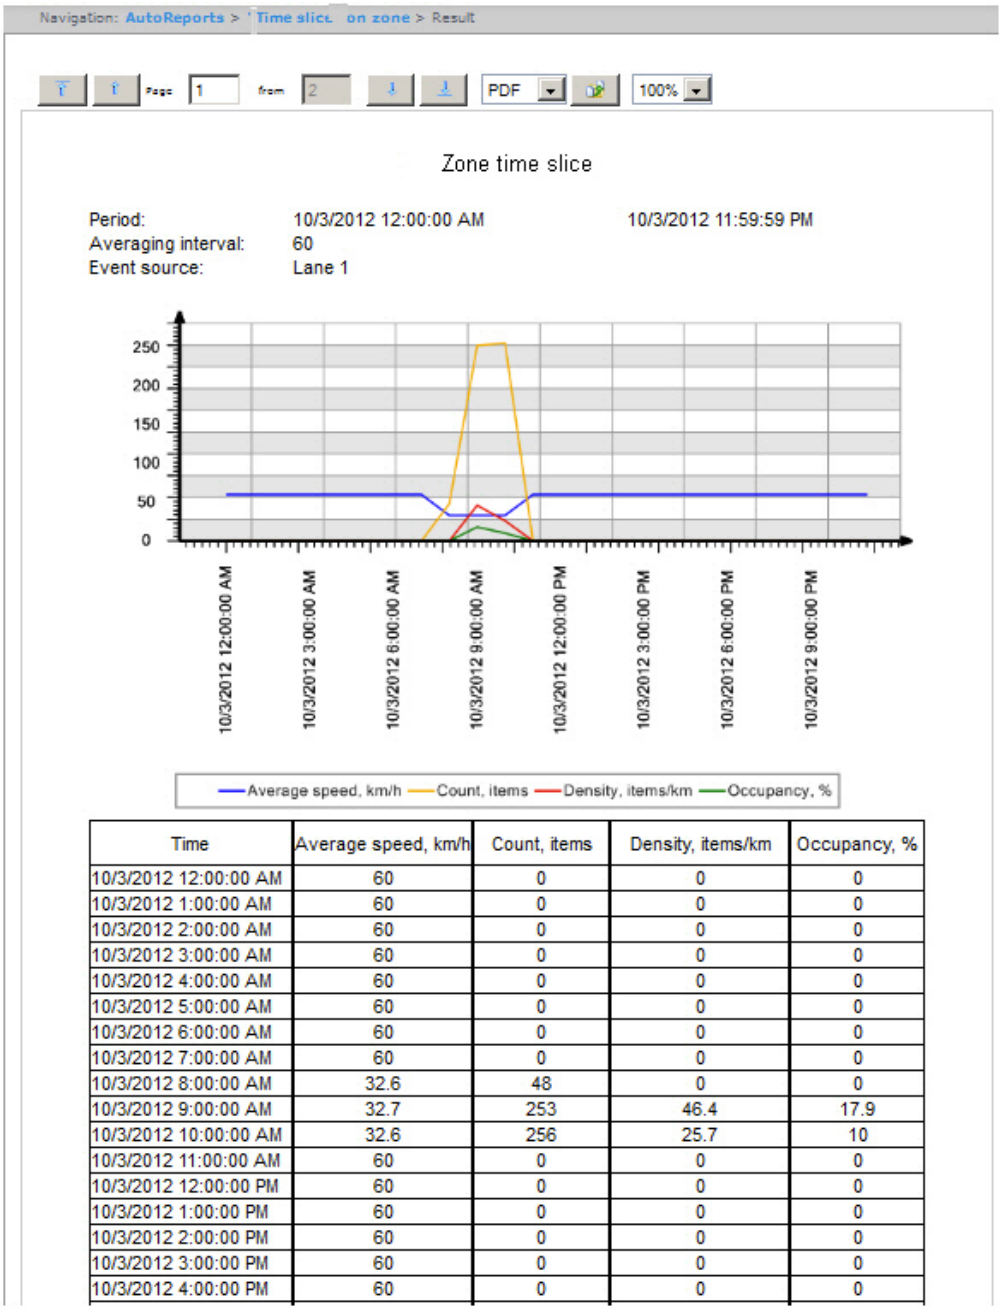
e. From the **Data source (zone or detector)** drop-down list select the **Region** object corresponding to the lane on which the report is to be created (**4**).

> **Note**
> Only one object can be selected in the **Data source (zone or detector)** drop-down list. The content of the list depends on the *Auto-Intellect* configuration.

f. From the **Report's content** drop-down list select the way of report displaying: table and/or chart (**5**).
g. In the **Title** field enter the report name which is to be displayed (**6**).
h. Set the **View average speed data** checkbox to include the data about average speed on the selected lane (**7**).
i. Set the **View volume data** checkbox to include the data about vehicle numbers on the lane for the specified time period (**8**).
j. Set the **View density data** checkbox to include the data about vehicle numbers per kilometer on the specified lane (**9**).
k. Set the **View Occupancy data** checkbox to include the data about percent of lane occupancy (**10**).

3. Click **Execute** to create the report (**11**).

As a result the report in the selected form is displayed.



Time	Average speed, km/h	Count, items	Density, items/km	Occupancy, %
10/3/2012 12:00:00 AM	60	0	0	0
10/3/2012 1:00:00 AM	60	0	0	0
10/3/2012 2:00:00 AM	60	0	0	0
10/3/2012 3:00:00 AM	60	0	0	0
10/3/2012 4:00:00 AM	60	0	0	0
10/3/2012 5:00:00 AM	60	0	0	0
10/3/2012 6:00:00 AM	60	0	0	0
10/3/2012 7:00:00 AM	60	0	0	0
10/3/2012 8:00:00 AM	32.6	48	0	0
10/3/2012 9:00:00 AM	32.7	253	46.4	17.9

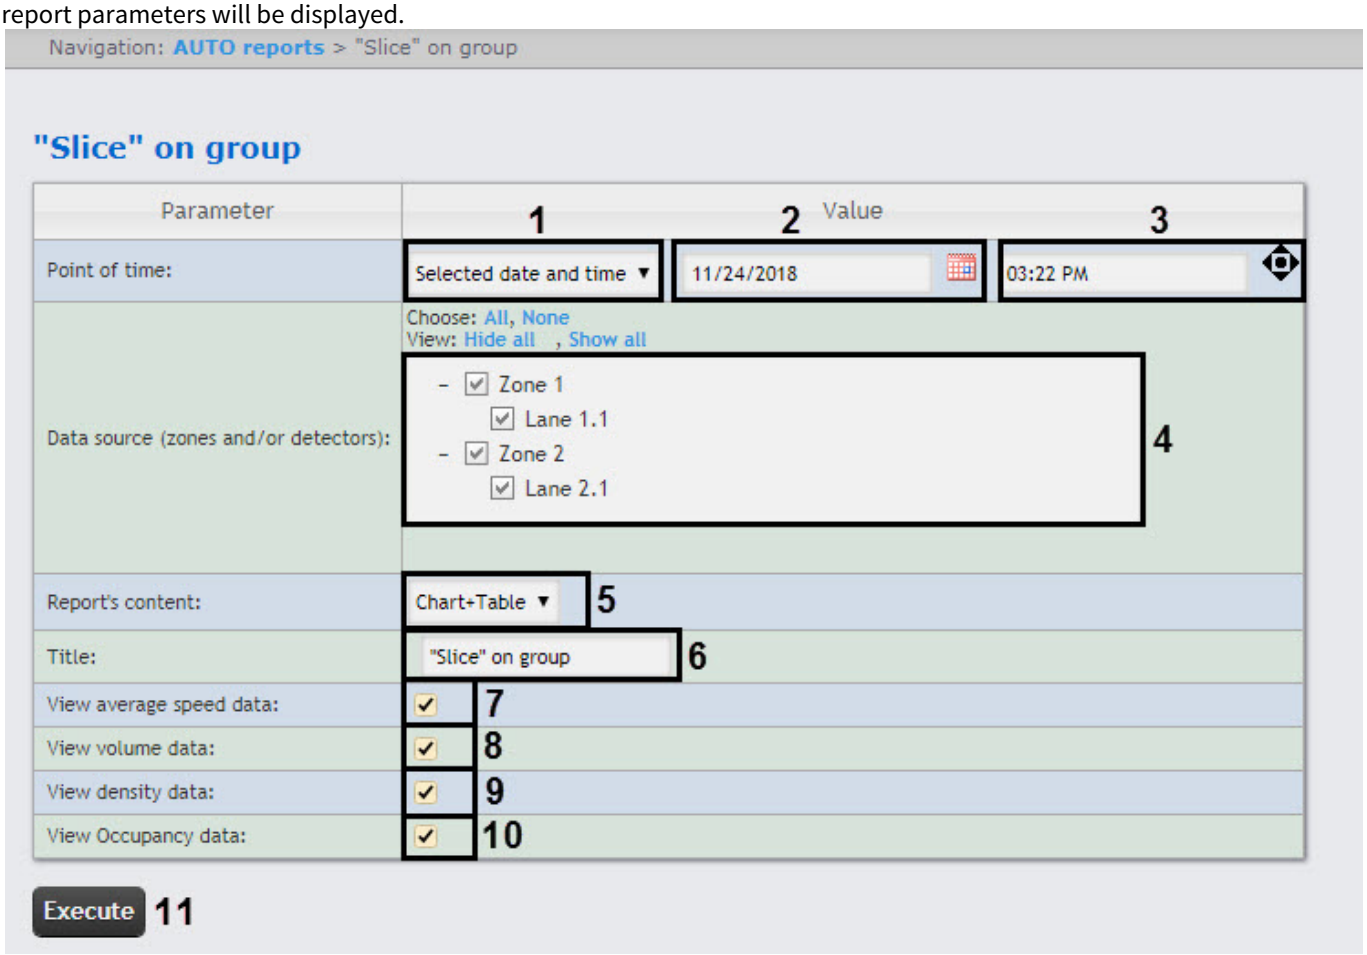
8.6.3 "Slice" on group

The **"Slice" on group** report allows getting data about the vehicles average speed, the traffic range and density, and the lanes occupation in the selected point of time. The point of time is specified within the accuracy of a minute. The report data can be presented as a table and a chart.

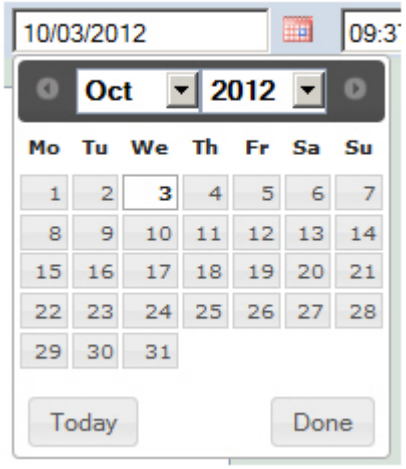
> **Note**
> The **"Slice" on group** report is related to the **Vehicle detector** and **Vehicle processor** modules (it is necessary to create the corresponding object in the *Intellect* software).

To create a **"Slice" on group** report, do the following:

1. Select the **"Slice" on group** report type (see Selecting the type of Auto report). As a result the dialog box for specifying the report parameters will be displayed.



2. Specify the report parameters in the following way:
   a. From the **Point of time** drop-down list select the mode of specifying the slice moment: select the **Current date and time** if the report is to be created on the current moment or **Selected date and time** if the report is to be created on the specified point of time (**1**).
   b. If the **Selected date and time** mode was selected, enter the date when the report is to be created using the **Calendar** tool in the (**2**) field and date of report in the (**3**) field. Click the button near the corresponding field to use the **Calendar** tool.



> **Note.**
>
> Click the button to set the current system date and time as the report time (**3**).

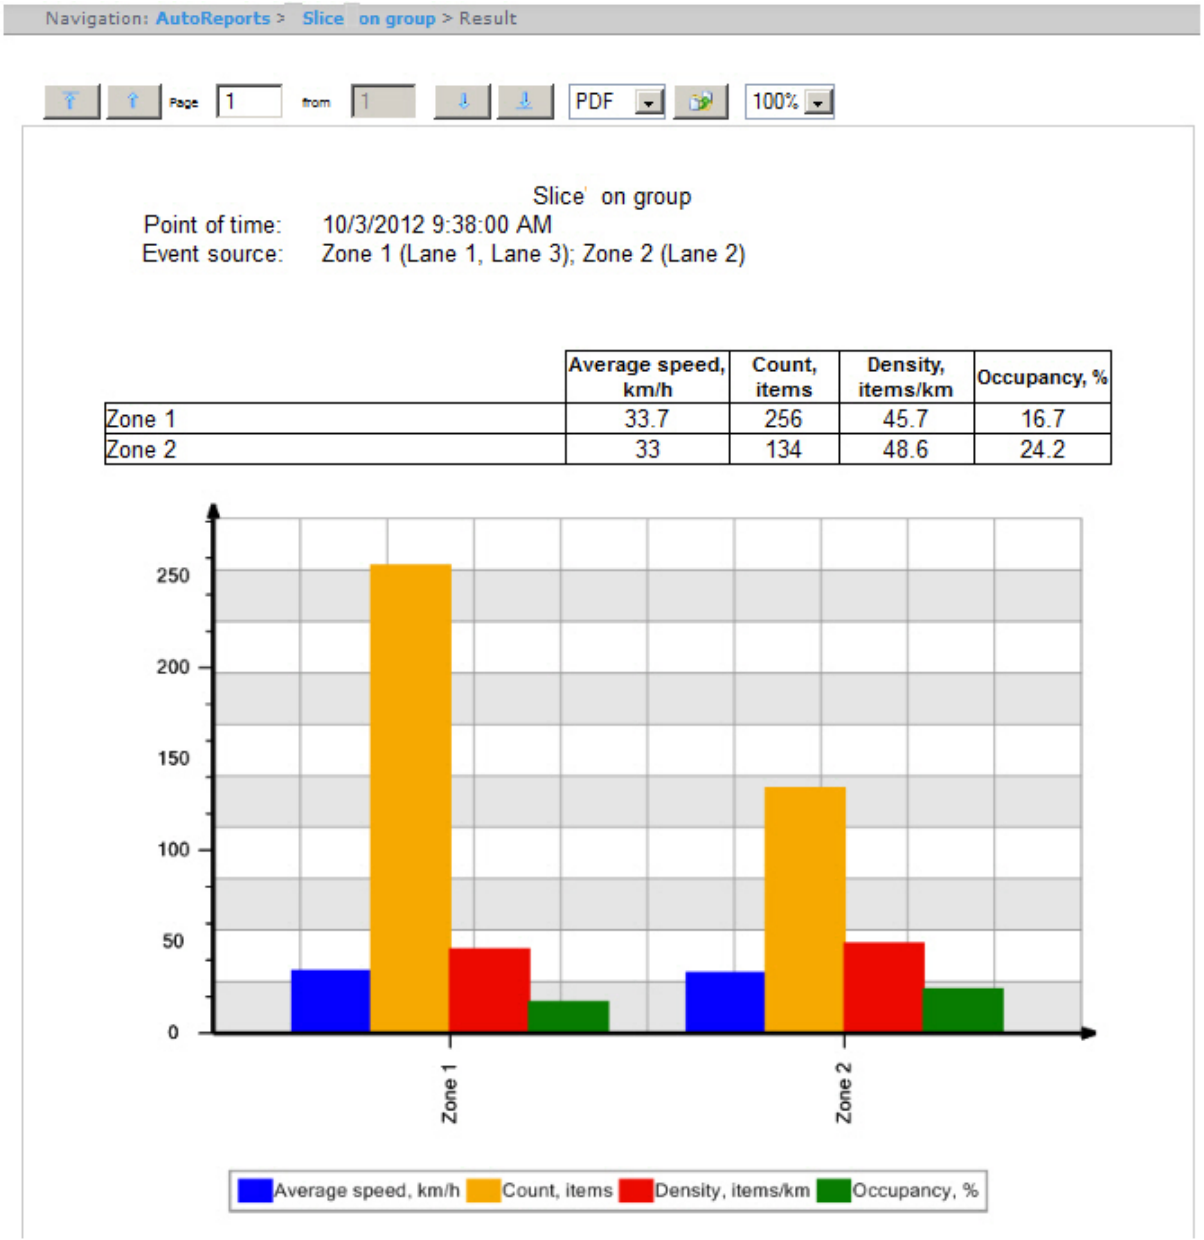
c. Set the checkboxes next to those lanes and/or detectors by which the report is to be created (**4**).

> **Note.**
> Click the **All** link to select all lanes and detectors in the list. Click the **None** link to uncheck all checkboxes. The content of the field depends on the *Auto-Intellect* configuration.

d. From the **Report's content** drop-down list select the way of report displaying (**5**).
e. In the **Title** field enter the report name which is to be displayed (**6**).
f. Set the **View average speed data** checkbox to include the data about average speed on selected lanes (**7**).
g. Set the **View volume data** checkbox to include the data about vehicle numbers on lanes for the specified time period (**8**).
h. Set the **View density data** checkbox to include the data about vehicle numbers per kilometer on the specified lanes (**9**).
i. Set the **View Occupancy data** checkbox to include the data about percent of lanes occupancy (**10**).

3. Click **Execute** to create the report (**11**).

As a result the report in the selected form is displayed.



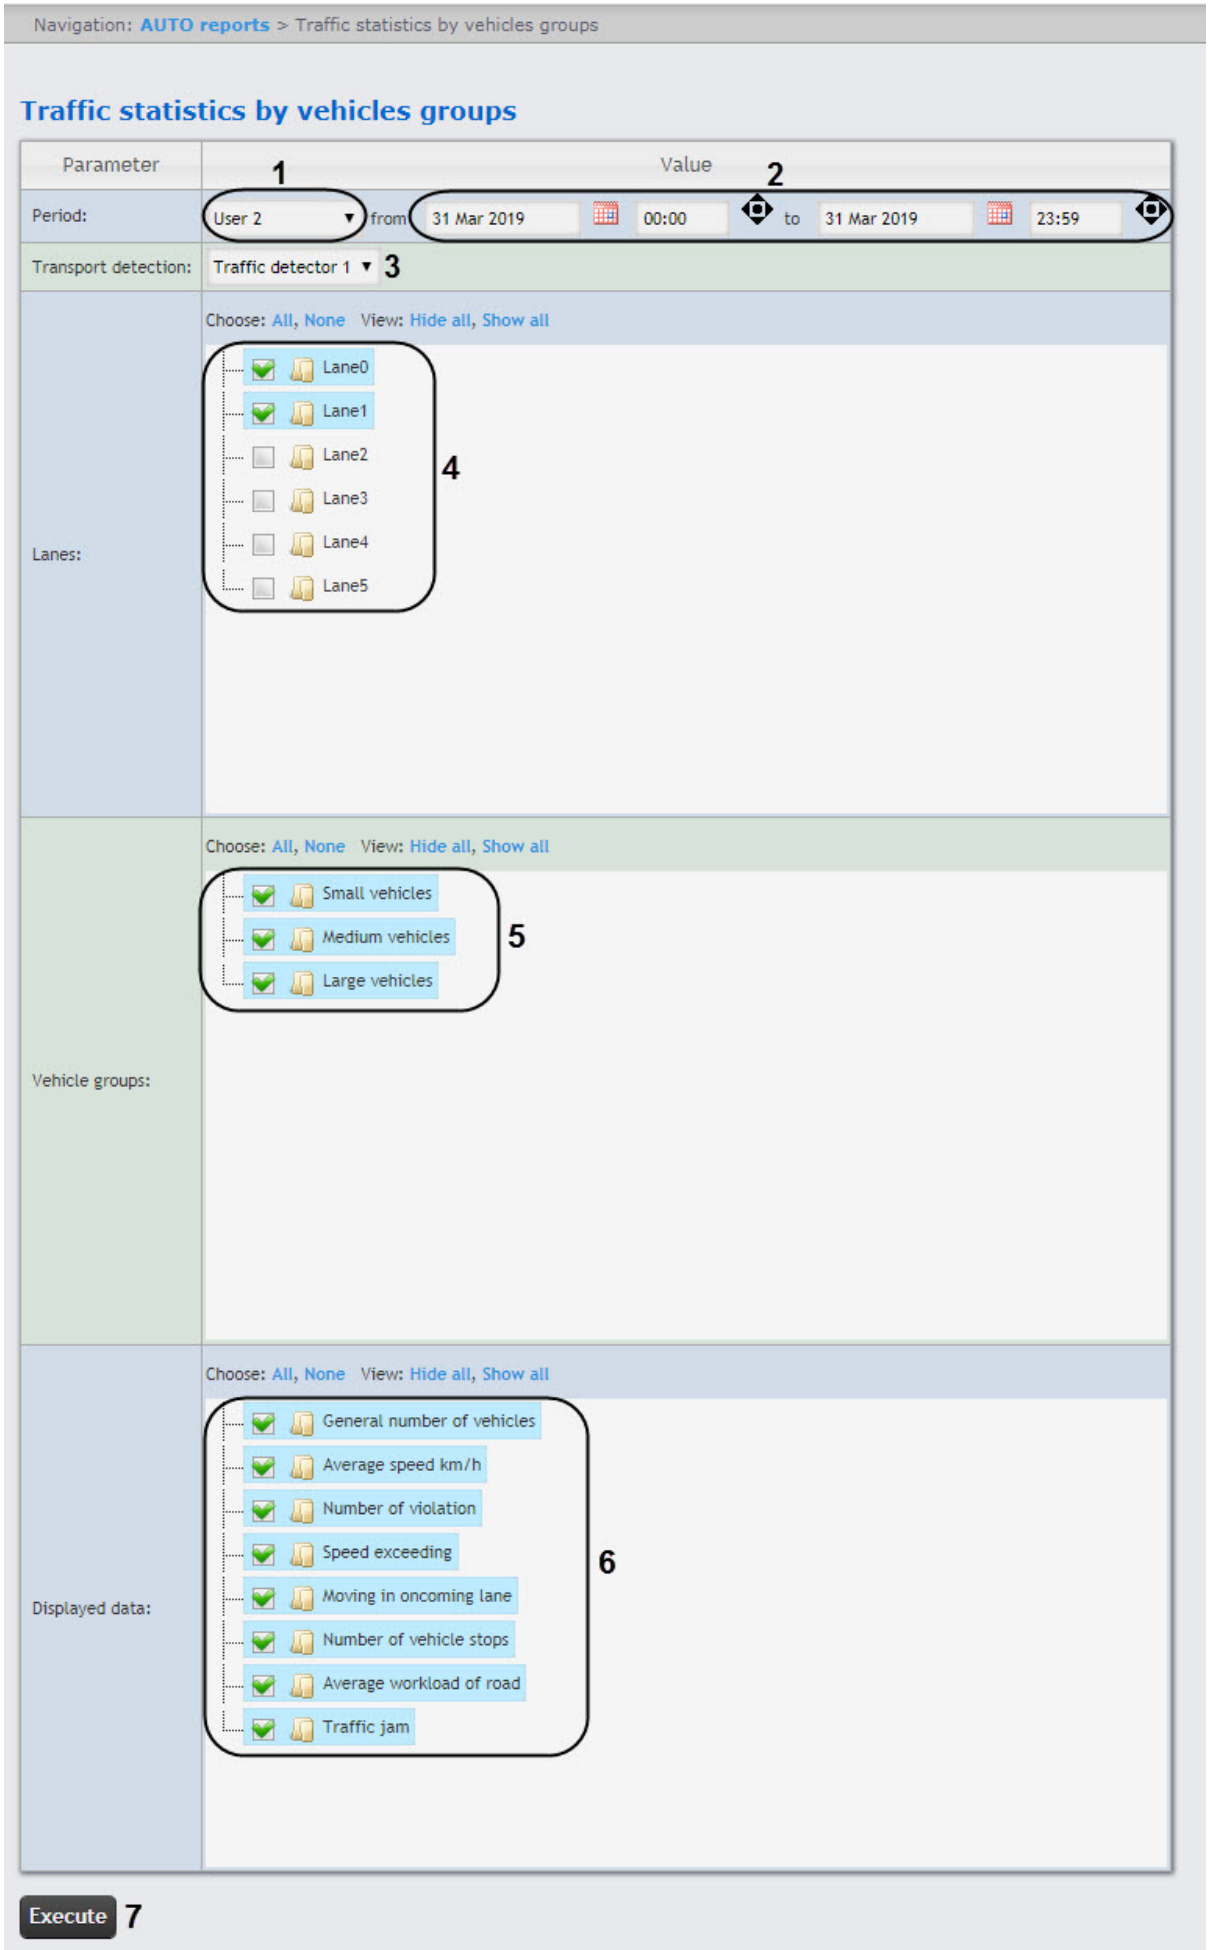
8.6.4 Traffic statistic by vehicles groups

The **Traffic statistic by vehicles groups** report allows getting statistical data for each specified group of vehicles. Vehicles group is a set of several vehicles types.

> **Note**
> The **Traffic statistic by vehicles groups** report is related to the **Traffic detector** and **Vehicle processor** modules (it is necessary to create the corresponding object in the *Intellect* software).

To create the **Traffic statistic by vehicles groups** report, do the following:

1. Select the **Traffic statistic by vehicles groups** report type (see Selecting the type of Auto report). As a result the dialog box for specifying the report parameters will be displayed.



Navigation: AUTO reports > Traffic statistics by vehicles groups

2. Specify the report parameters in the following way:
   a. In the **Period** drop-down list select the time period for which the report is to be created (**1**).
      i. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool (**2**). Click the button next to the corresponding field to use the **Calendar** tool.

      ii. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
      iii. If another period type is selected, specifying the date of start and end periods is not needed.
   b. In the **Transport detection** drop-down list select the **Transport detection** object or the **Vehicle processor** object, which data should be used in the report (**3**).

> **Note**
> Only one object can be selected in the **Transport detection** drop-down list. The content of the list depends on the *Auto-Intellect* configuration.

   c. In the **Lanes** list set checkboxes next to those lanes data of which is to be included in the report (**4**).

> **Note.**
> In order to select all lanes in the list click the **All** link. To uncheck all checkboxes click the **None** link.

   d. In the **Vehicle groups** list set checkboxes in those vehicle groups data of which is to be included in the report (**5**). The following vehicle groups are available:
      - Small vehicles (the group includes cars);
      - Medium vehicles (the group includes cargo vehicles less than 12 m);
      - Large vehicles (the group includes cargo vehicles more than 12 m and buses).

> **Note**
> In order to select all vehicle groups in the list click the **All** link. To uncheck all checkboxes click the **None** link.

   e. In the **Displayed data** list set checkboxes next to those parameters which are to be included in the report (**6**).

> **Note.**
> In order to select all fields in the list click the **All** link. To uncheck all checkboxes click the **None** link.

3. Click **Execute** to create the report (**7**).

4. As a result the report in the selected form is displayed.

2. Specify the report parameters in the following way:
   a. In the **Period** drop-down list select the time period for which the report is to be created (**1**).
      i. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool (**2**). Click the button next to the corresponding field to use the **Calendar** tool.

      ii. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.
      iii. If another period type is selected, specifying the date of start and end periods is not needed.
   b. In the **Transport detection** drop-down list select the **Transport detection** object or the **Vehicle processor** object, which data should be used in the report (**3**).

> **Note**
> Only one object can be selected in the **Transport detection** drop-down list. The content of the list depends on the *Auto-Intellect* configuration.

   c. In the **Lanes** list set checkboxes next to those lanes data of which is to be included in the report (**4**).

> **Note.**
> In order to select all lanes in the list click the **All** link. To uncheck all checkboxes click the **None** link.

   d. In the **Types of vehicles** list set checkboxes next to those vehicle types data of which is to be included in the report (**5**). The following types of vehicles can be selected:
      - Cars;
      - Cargo vehicles less than 12 m;
      - Cargo vehicles more than 12 m;
      - Buses.

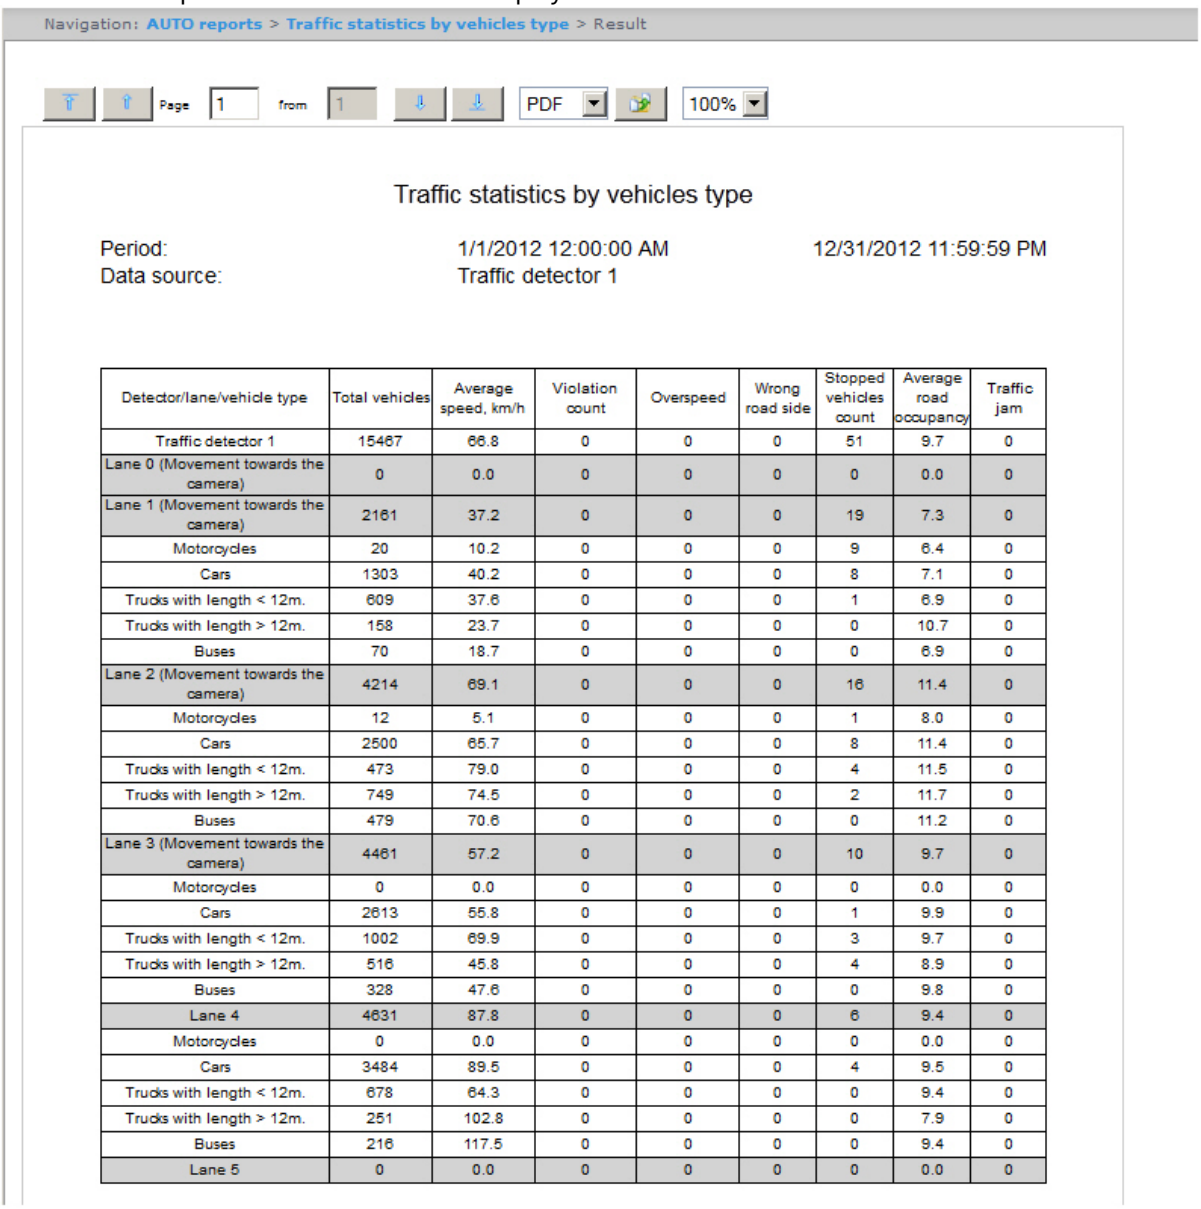
> **Note**
> In order to select all types of vehicles in the list click the **All** link. To uncheck all checkboxes click the **None** link.

   e. In the **Displayed data** list set checkboxes next to those parameters which are to be included in the report (**6**).

> **Note**
> In order to select all fields in the list click the **All** link. To uncheck all checkboxes click the **None** link.

3. Click **Execute** to create the report (**7**).

4. As a result the report in the selected form is displayed.



Traffic statistics by vehicles type

Cars	3484	89.5	0	0	0	4	9.5	0
Trucks with length < 12m.	678	64.3	0	0	0	0	9.4	0
Trucks with length > 12m.	251	102.8	0	0	0	0	7.9	0
Buses	216	117.5	0	0	0	0	9.4	0
Lane 5	0	0.0	0	0	0	0	0.0	0

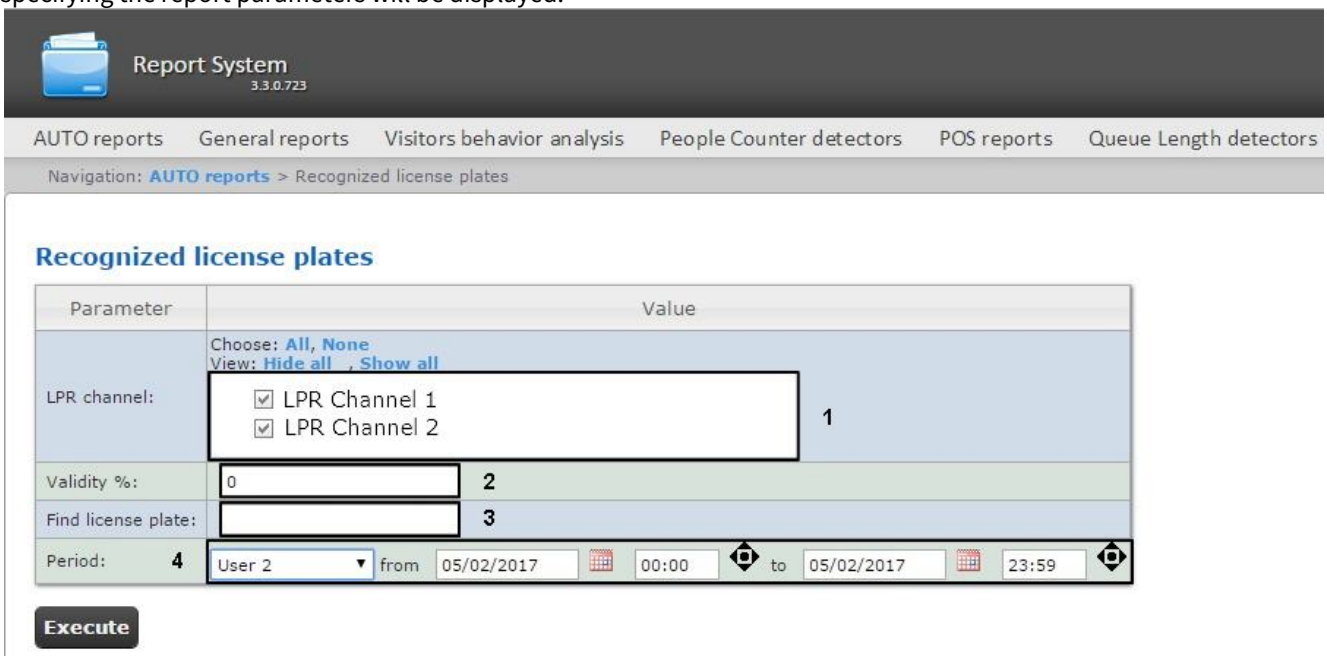
8.6.6 Recognized license plates

The **Recognized license plates** report allows getting data about the license plates recognized within a specified time period.

> **Note**
> The **Recognized license plates** report is related to the **LPR Channel** module (it is necessary to create the corresponding object in the *Intellect* software)

To create the **Recognized license plates** report, do the following:

1. Select the **Recognized license plates** report type (see Selecting the type of Auto report). As a result the dialog box for specifying the report parameters will be displayed.



2. Specify the report parameters in the following way:

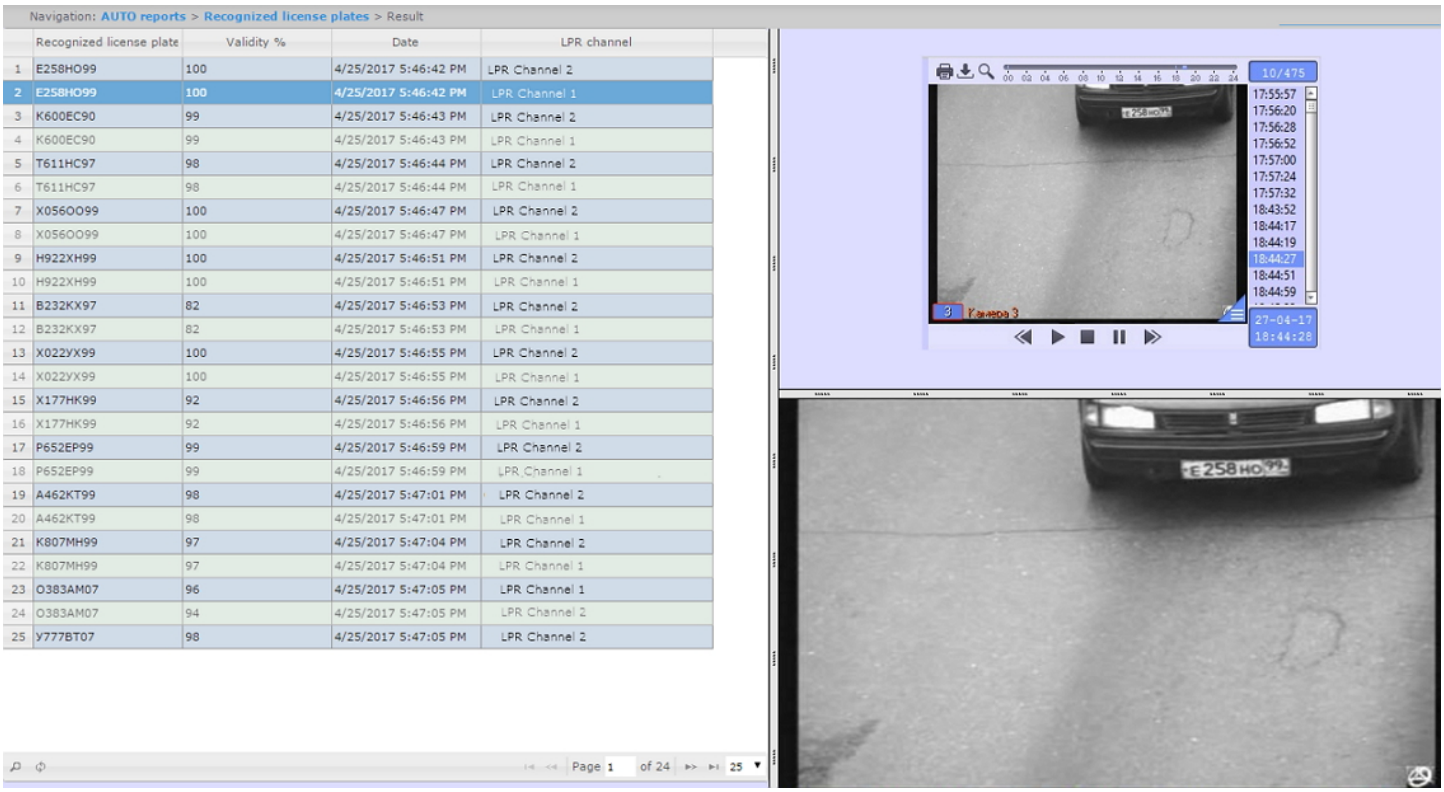
> **Note**
> The choice of LPR Channels and the period is mandatory, the remaining filters are optional.

   a. In the **LPR channel** field, set the check boxes for the license plate readers according to which the report will be built (**1**).
   b. In the **Validity %** field, specify the minimum validity (accuracy of recognition) (**2**).
   c. In the **Find license plate** field, you can specify a certain LP number by which all recognition events will be searched (**3**). Otherwise, the report will be built by all LP numbers recognized at the specified time interval.
   d. From the **Period** drop-down list, select the time interval for which the report should be built (**4**). You can specify a custom interval by selecting **User 2** and using the calendar tool.

4. Click **Execute** to run the report.

   As a result the report in the selected form is displayed.

The report table contains the vehicle numbers, recognition accuracy (validity), date and the reader that recognized the number. When you click on the row of the table, a screenshot from the camera (in the lower right corner of the report) is displayed and if there is access to the video archive, the video is played (in the upper right corner of the report).



Important!
If the recognized LP images and the vehicle frames are stored in a folder on a disk, then to display the screenshots from the camera, it is necessary to pre-configure the **Recognized license plates** report (see Setting up the Recognized license plates report).

Warning!
The report can only be viewed online. Downloading the report in various formats or auto-sending is not available.

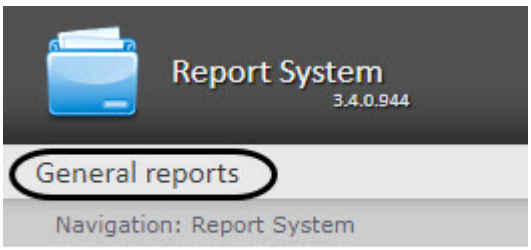
8.7 Working with general reports

8.7.1 Selecting the type of general report

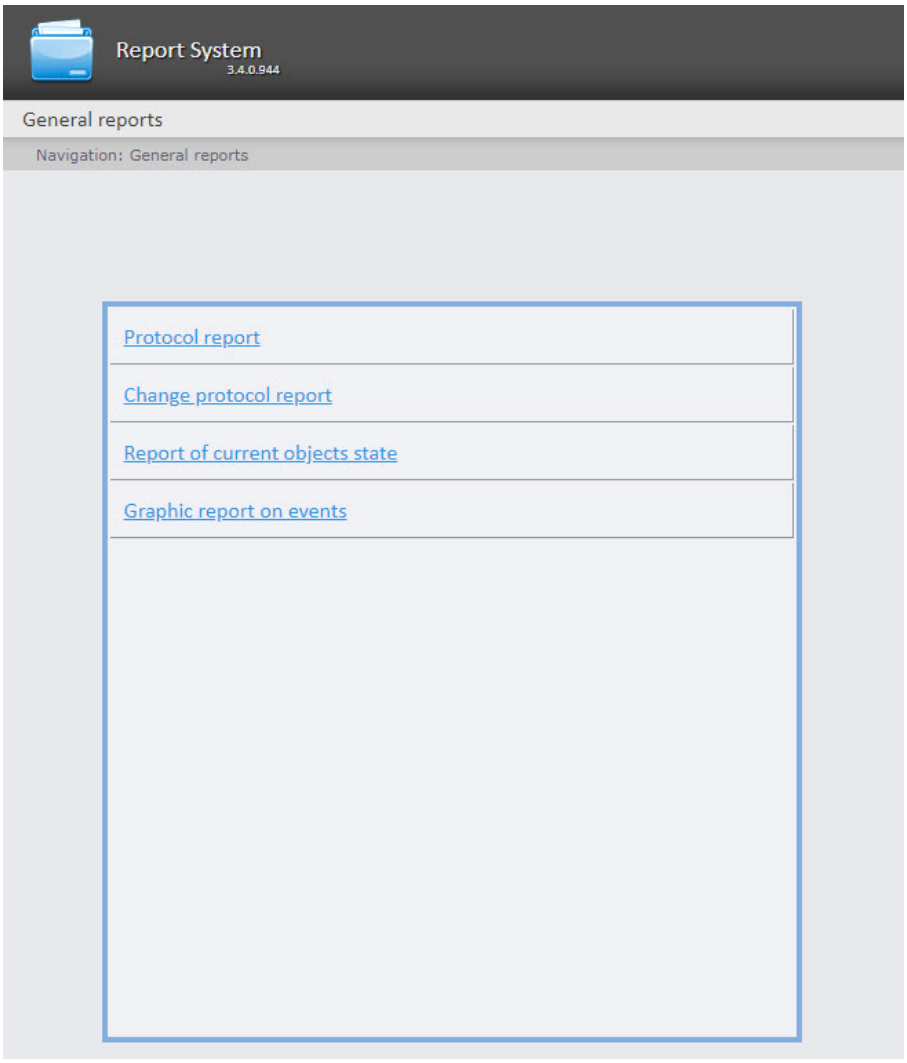
It is possible to create the following general reports:

1. Protocol report. This report allows getting information on events presence from specified objects during the determined time period.
2. Change protocol report. This report allows getting information on performed object changes.
3. Report of current objects state. This report allows getting information about current status of objects.
4. Graphic report on events. This report allows getting information about the specified objects events in the form of a chart.

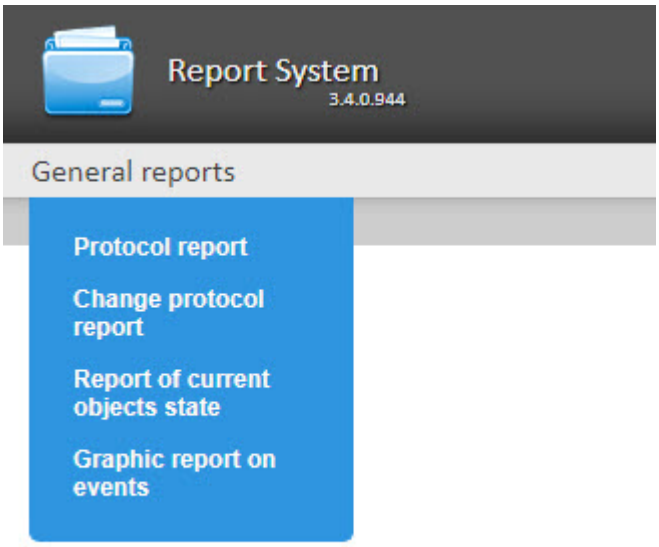
To select a type of general report click **General reports** link in the report menu of *Intellect Web Report System.*



As a result the list of available general reports is displayed. For switching to the required report click the corresponding link.



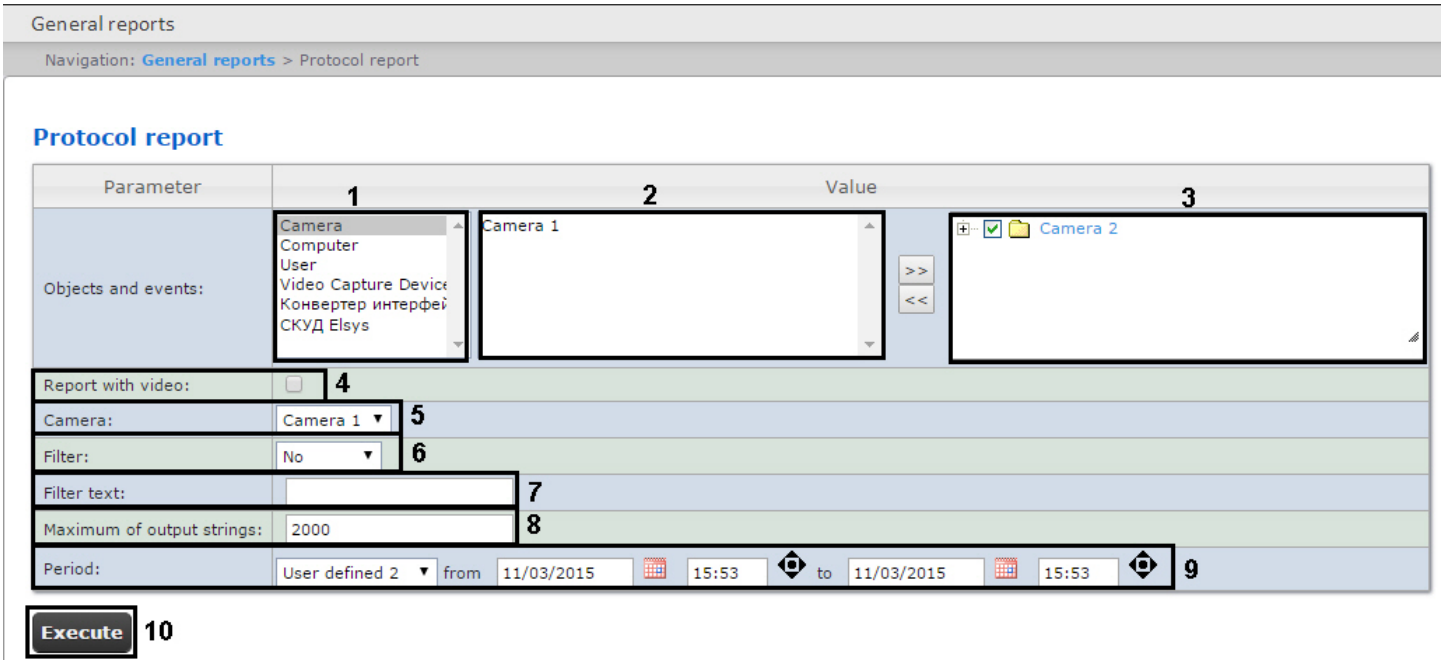
Note.
List of links for switching to General reports is available when hovering over the **General reports** link in the report menu.



8.7.2 Creating a Protocol report

In order to create a protocol report, do the following:

1. Select the **Protocol report** type (see Selecting a type of general report section).
2. As a result the dialog box for specifying the report parameters will be displayed.



Set the following report parameters:

1. Select the necessary object type from the objects and events list (**1**).

   > **Note**
   > It is possible to select the view of the list of objects and events (see Selecting the view of the list of objects and events for the Protocol report).

2. Select objects on which the report is to be created from the objects list of corresponding type (**2**).
3. Click the >> button to display events corresponding to the selected object.
4. Set the checkboxes in those events of the selected object on which information is to be displayed in the report (**3**).
5. Set the **Report with video:** checkbox to create the report which will be contain video image from the camera (**4**).
6. From the **Camera:** drop-down list select the camera from which the video will be displayed in the report (**5**).
7. From the **Filter:** drop-down list select the rule by which the filter will be applied when generating the report (**6**).
   - **No** - the filter will not be applied.
   - **Equals** - the report will be generated only for those events where the Information column content is strictly equal to the filter value specified in the **Filter text** field (**7**).
   - **Contains** - the report will be generated only for those events where the Information column contains the filter value specified in the **Filter text** field (**7**).

   > **Note**
   > The report is filtered only by the Information column (see the report fields description in the table below).

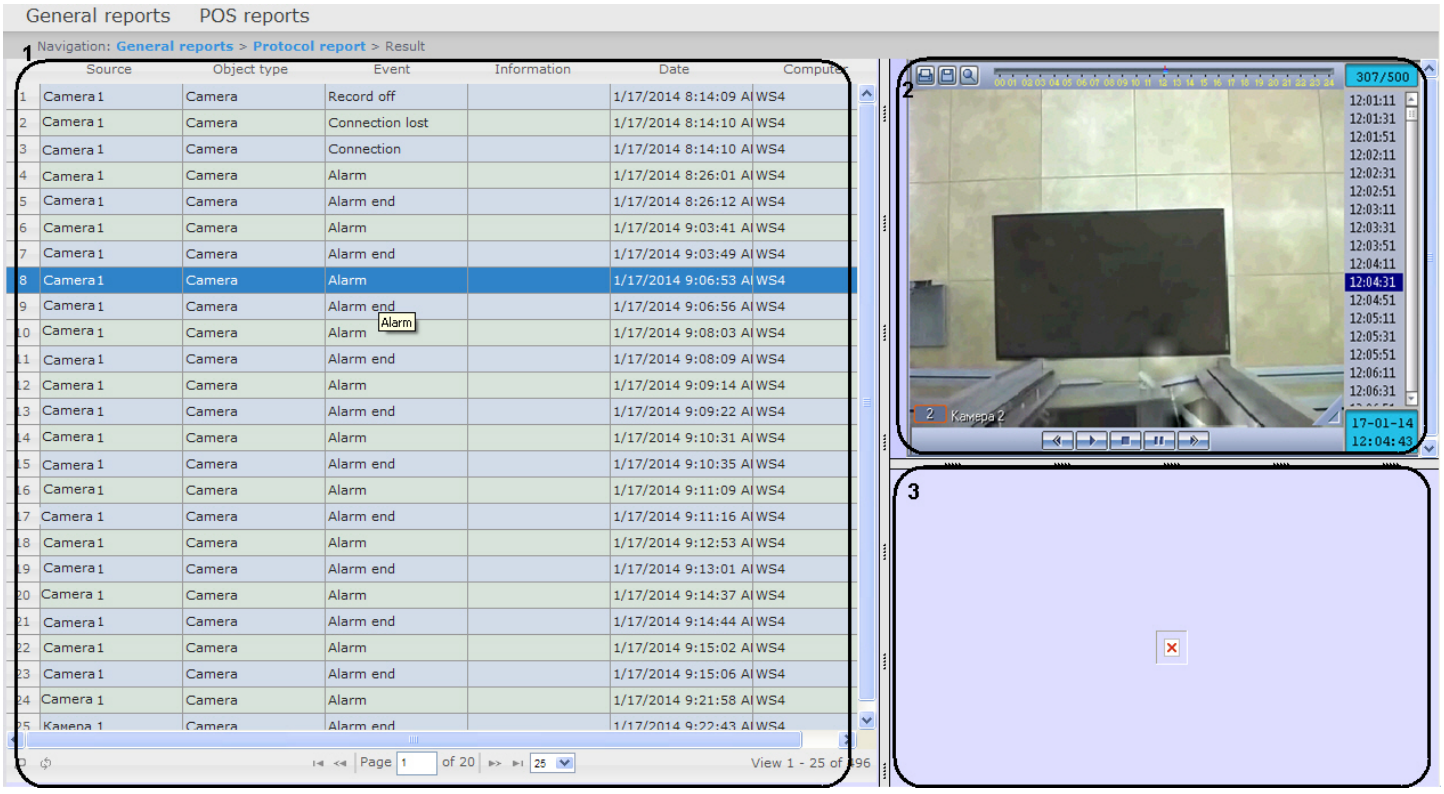
8. In the **Filter text:** field enter the value for the report filtering (**7**).
9. In the **Maximum of output strings:** field enter the number of output strings in the protocol report (**8**).
10. Specify the period as follows:
    a. From the **Period** dropdown list select the time period for which the report is to be created (**9**).
    b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button next to the corresponding field to use

the **Calendar** tool.

c. If the **User defined 2** period is selected, specify the time of start and end periods for which the report is to be created using the button.
If another period type is selected, specifying the date of start and end periods is not needed.

11. To create a report click **Execute** (**10**).

As a result the **Protocol report** with specified parameters is displayed.



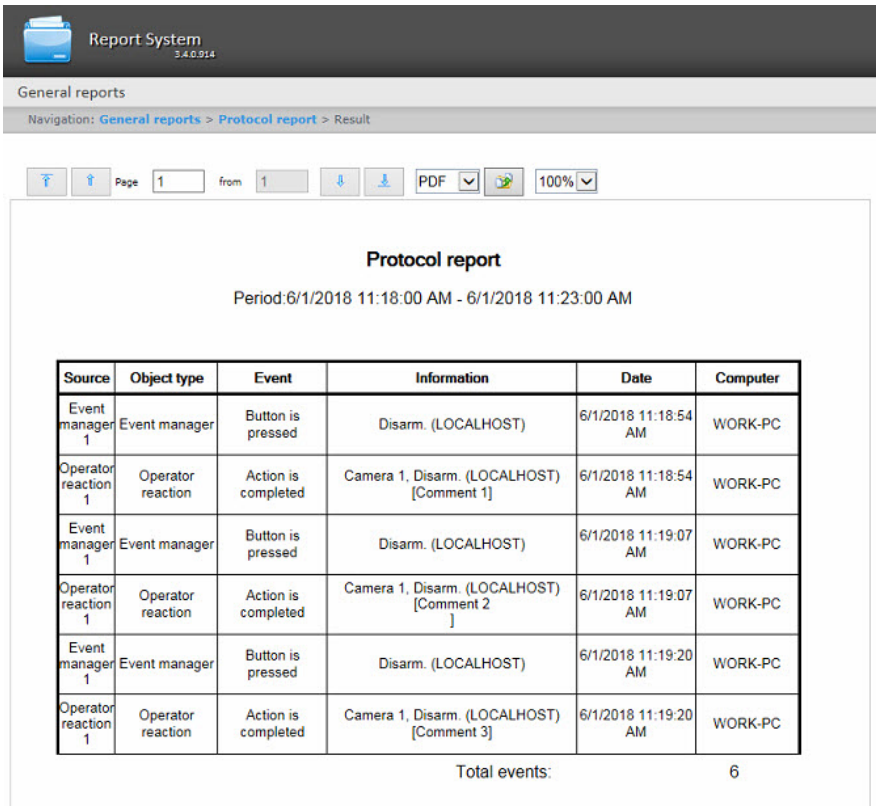
A form of the **Protocol report** with video displaying consists of three parts. Part **1** is equal to the print form of protocol reports without video displaying. Part **2** displays video from the selected camera. Part **3** displays image.

Video is displayed in case of the video archive for the specified period is existed. Otherwise, the last frame from archive is displayed.

Images corresponding to events of employee passes will be displayed while using the FSA/ACS module. Specify the path to the folder with images in the <add key="PathToPhotos" value ="" /> parameter in the web.config file to display images. On default, the "/BMP/Person/" path is specified.

Names of files should correspond to ID of emloyees whose passes are displayed in report.

Attention!
It is impossible to print the form of **Protocol report** with video displaying. If it is needed to get the pint form of the **Protocol report** create the report without video, i.e. the **Report with video:** checkbox should be deselect.



The description of report fields is given in the table.

Field name	Description
Source	Source object of the event *Note. The information in this column is received from the objid column of the dbo.PROTOCOL table of the Intellect database*
Object type	Type of source object of the event *Note. The information in this column is received from the objtype column of the dbo.PROTOCOL table of the Intellect database*
Event	Name of the event *Note. The information in this column is received from the action column of the dbo.PROTOCOL table of the Intellect database*
Information	Information on the event *Note. The information in this column is received from the param0 column of the dbo.PROTOCOL table of the Intellect database*
Date	Date and time of the event *Note. The information in this column is received from the date column of the dbo.PROTOCOL table of the Intellect database*
Computer	Name of the computer where the event happens

Note
For details about the dbo.PROTOCOL table, see Base Intellect database tables.

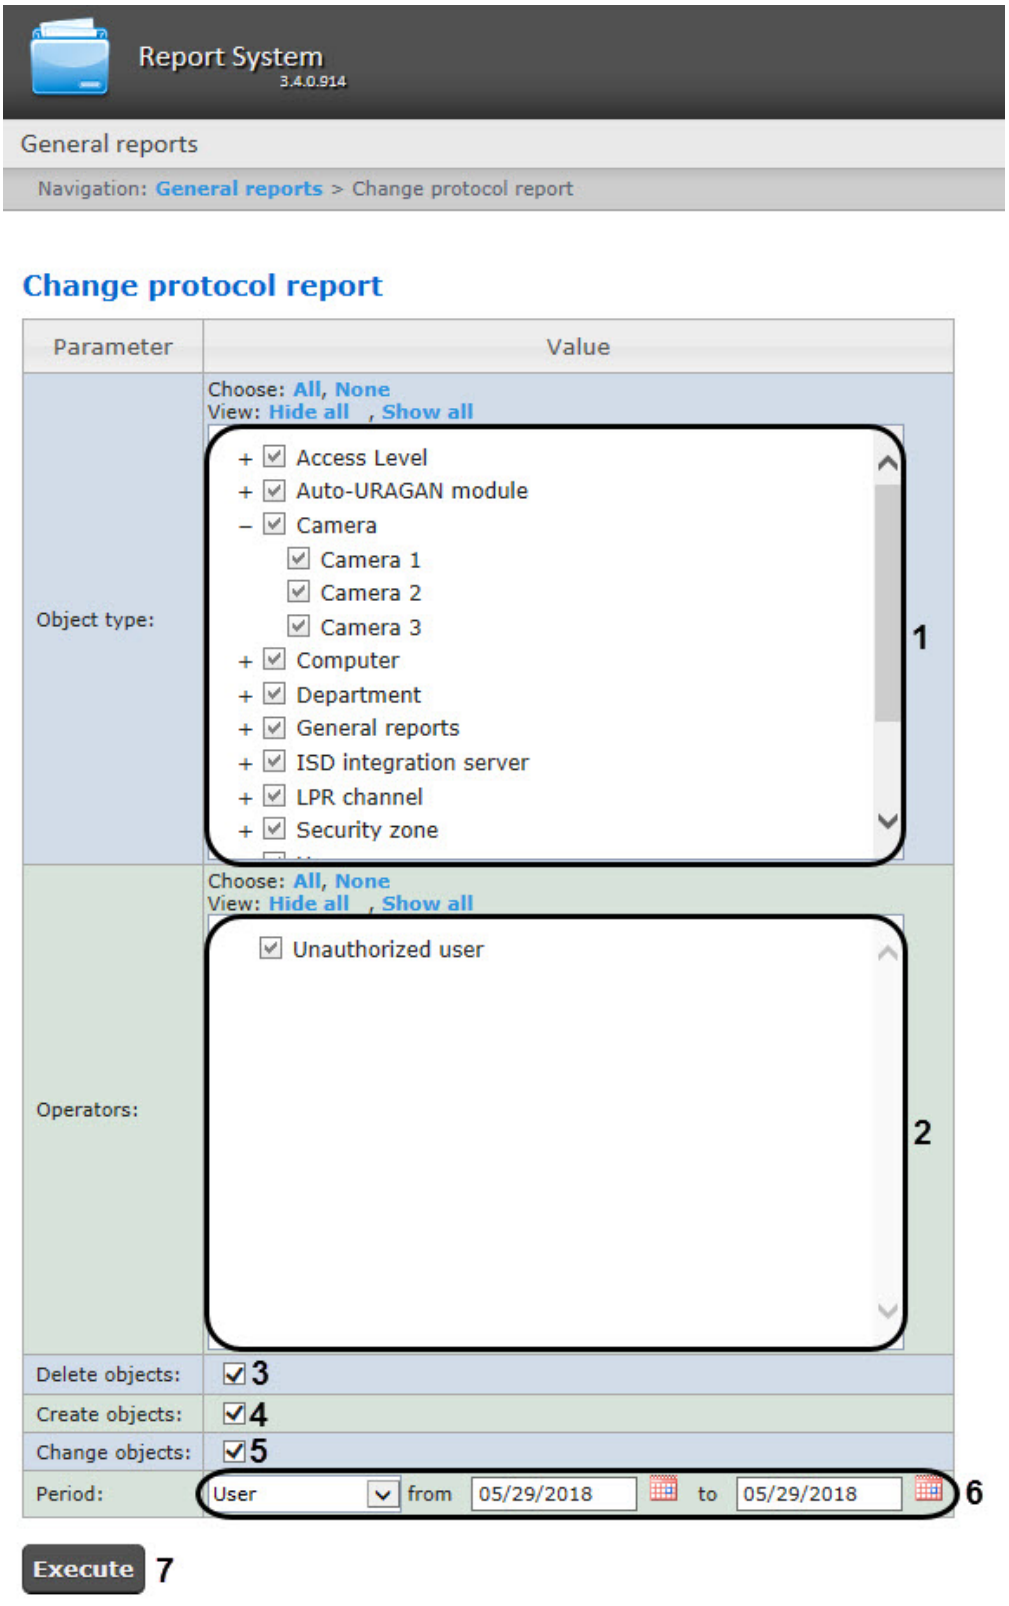
Note
The operator's comment confirming the event in Event Manager module is specified in square brackets in the **Information** field (see Example of working with the Event manager module).

Attention!
To create the auto generated protocol report you should select the report without video displaying.

8.7.3 Creating a Change protocol report

In order to create a protocol report, do the following:

1. Select the **Change protocol report** type (see Selecting a type of general report section).
2. As a result the dialog box for specifying the report parameters will be displayed.



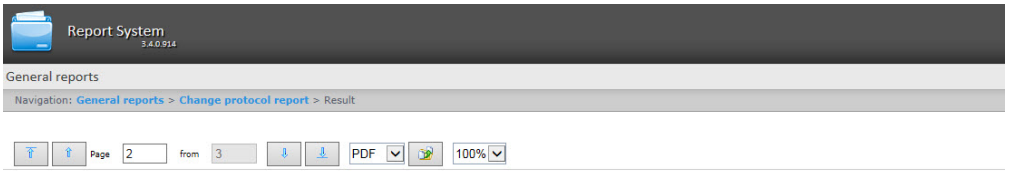
Set the following report parameters:

1. In the **Object type** field set checkboxes in those types of objects to which the changed, created or removed object belongs (**1**).

> **Note**
> Any objects can be selected by expanding the object type list.

2. In the **Operators** field set checkboxes in those users who have rights to change objects (**2**). The **Unathorized user** value means change of system by unathorized user, deleted user and/or user with deleted rights.
3. To display deleted objects in the report set the corresponding checkbox (**3**).
4. To display created objects in the report set the corresponding checkbox (**4**).
5. To display objects which have been changed set the **Change objects** checkbox (**5**).
6. Specify the period in the following way:
   a. From the **Period** drop-down list select the time period for which the report is to be created (**6**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
7. To create a report click **Execute** (**7**).

As a result a change protocol report with specified parameters is displayed.



Object type	Object name	Event	Username	Date	Computer	Changes
General reports	General reports 1 [1]	Create	ADMIN	5/29/2018 1:27:38 PM	WORK-PC

ReportSystem v3.4.0.914 2

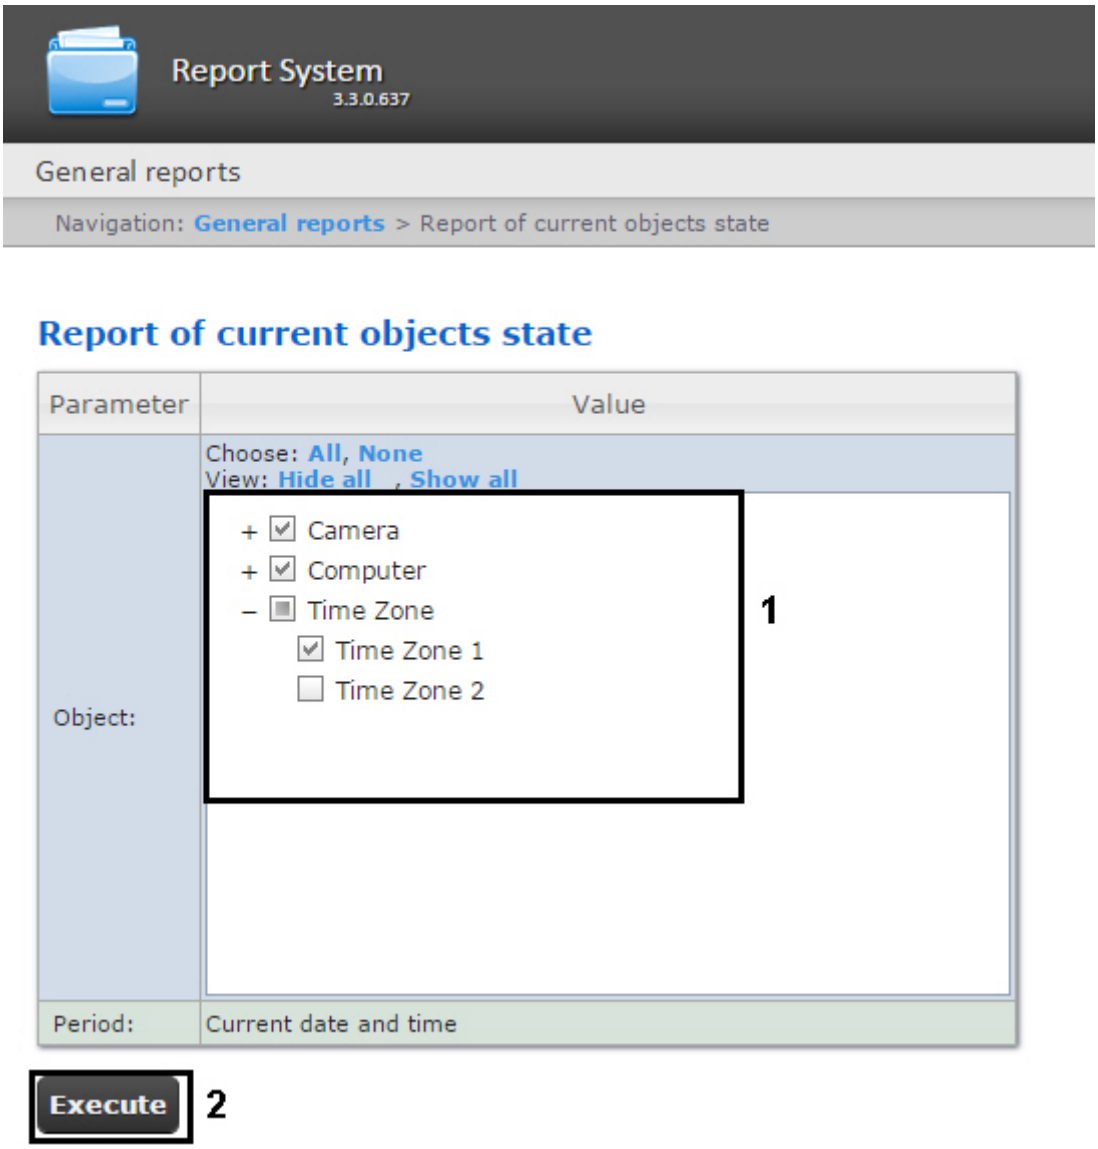
> **Note**
> The ID of the object is specified in square brackets in the end of the object name in the **Object name** field.

> **Note**
> In the created report objects are sorted by their ID and by the event date.

8.7.4 Creating a report of current objects state

In order to create a report of current objects state, do the following:

1. Select the **Report of current objects state** type (see Selecting a type of general report section).
2. As a result the dialog box for specifying the report parameters will be displayed.



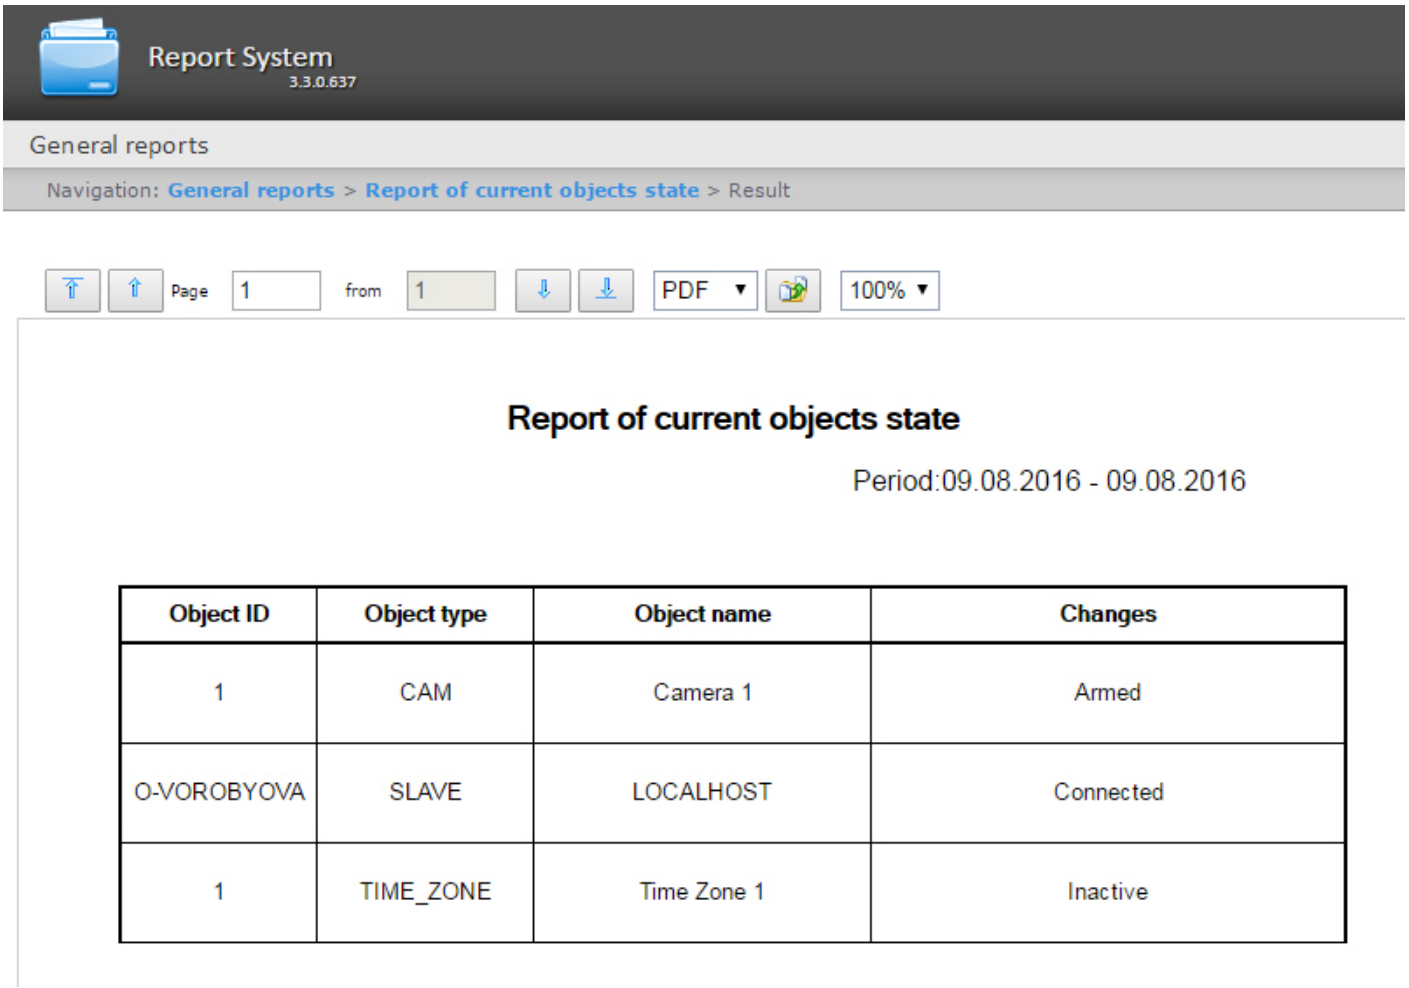
Set the following report parameters:

1. In the **Object:** field set checkboxes in those objects which current state is to be displayed in the report (**1**).

   > **Note.**
   > Only objects with status displayed on the map are given in the **Object** field.

2. Click the **Execute** button (**2**).

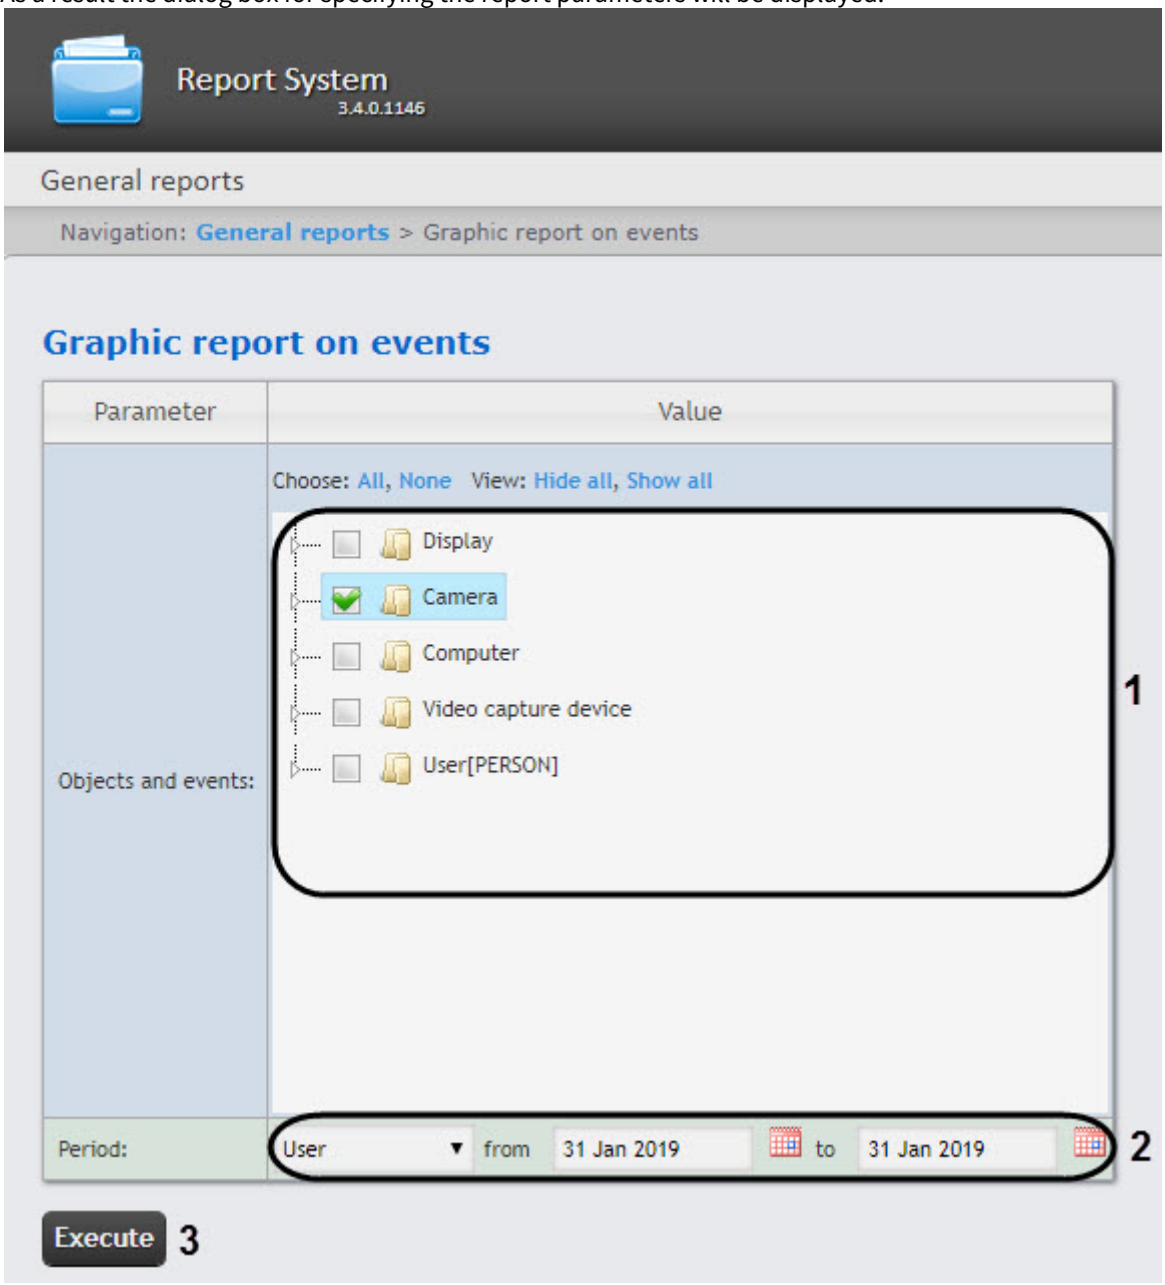
As a result a report of current objects state with specified parameters is displayed.



8.7.5 Creating a Graphic report on events

To create the **Graphic report on events**, do the following:

1. Select the **Graphic report on events** (see Selecting the type of general report).
   As a result the dialog box for specifying the report parameters will be displayed.



2. Set the report parameters in the following way:
   a. In the **ObjectEvents** field (**1**) set the checkboxes for the objects and their events the information on which should be displayed in the report.

      > **Note**
      > You can select any event by expanding the object type list.

3. Set the time period in the following way:
   a. From the **Period** drop-down list (**2**) select the time period for which the report is to be created.
      i. If the **User** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool.

         > **Note**
         > Click the button near the corresponding field to use the **Calendar** tool.

4. To create a report click **Execute** (**3**).
   As a result the report with specified parameters is displayed.

5. If the report is exported (see Exporting of reports), the report file will also contain the events table, sorted by the event source. This table contains the event name, event date and events number for each event source.

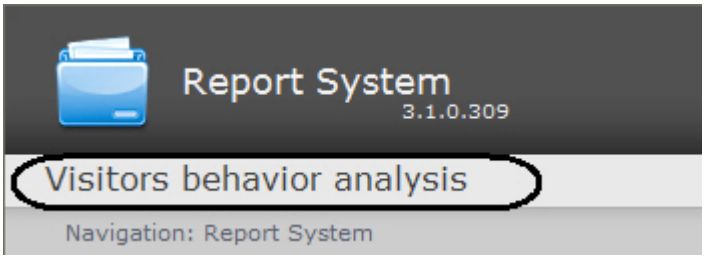
8.8 Working with Customer behavior reports

8.8.1 Selecting a type of Visitors behavior analysis reports

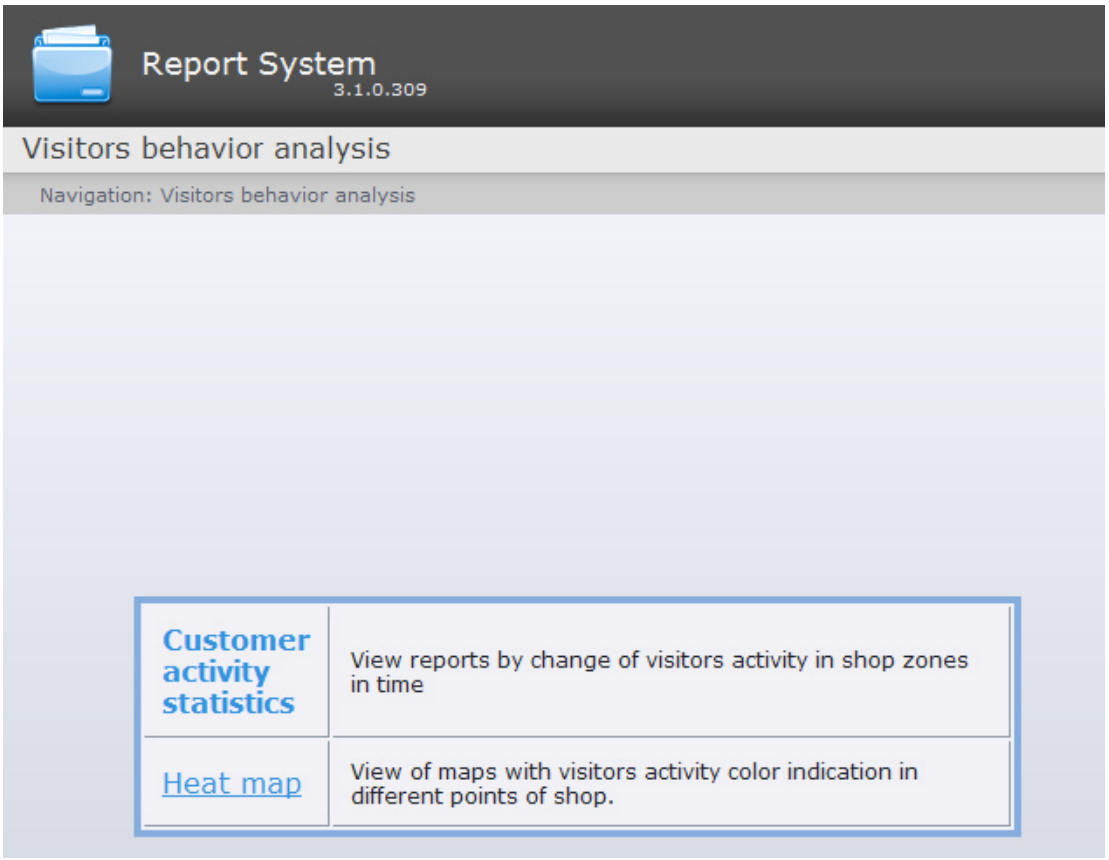
It is possible to create the following visitors behavior analysis reports:

1. Customer activity statistics report is used to inspect the chabge of customer activity over time and quantitavely estimate activity in different zones of monitored area.
2. Heat map report decides the issue of quick and auality comparison of customer activity in different zones of monitored area.

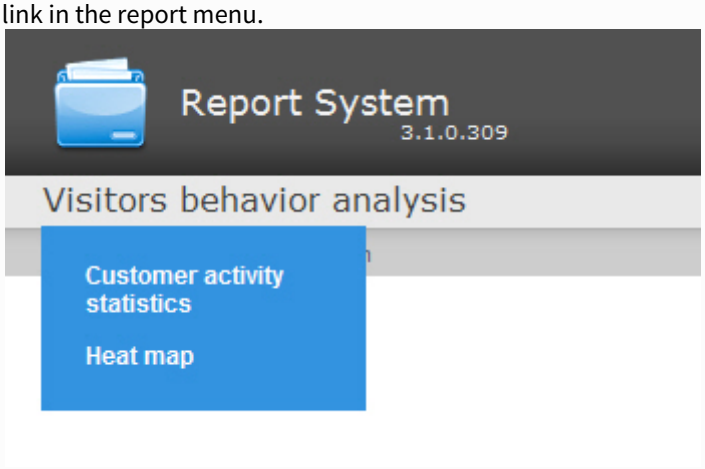
To select a type of visitors behavior analysis report click **Visitors behavior analysis** link in the report menu of *Intellect Web Report System*.



As a result the list of available visitors behavior analysis reports is displayed. For switching to the required report click the corresponding link.



Note.
List of links for switching to visitors behavior analysis reports is available when hovering the **Visitors behavior analysis** link in the report menu.

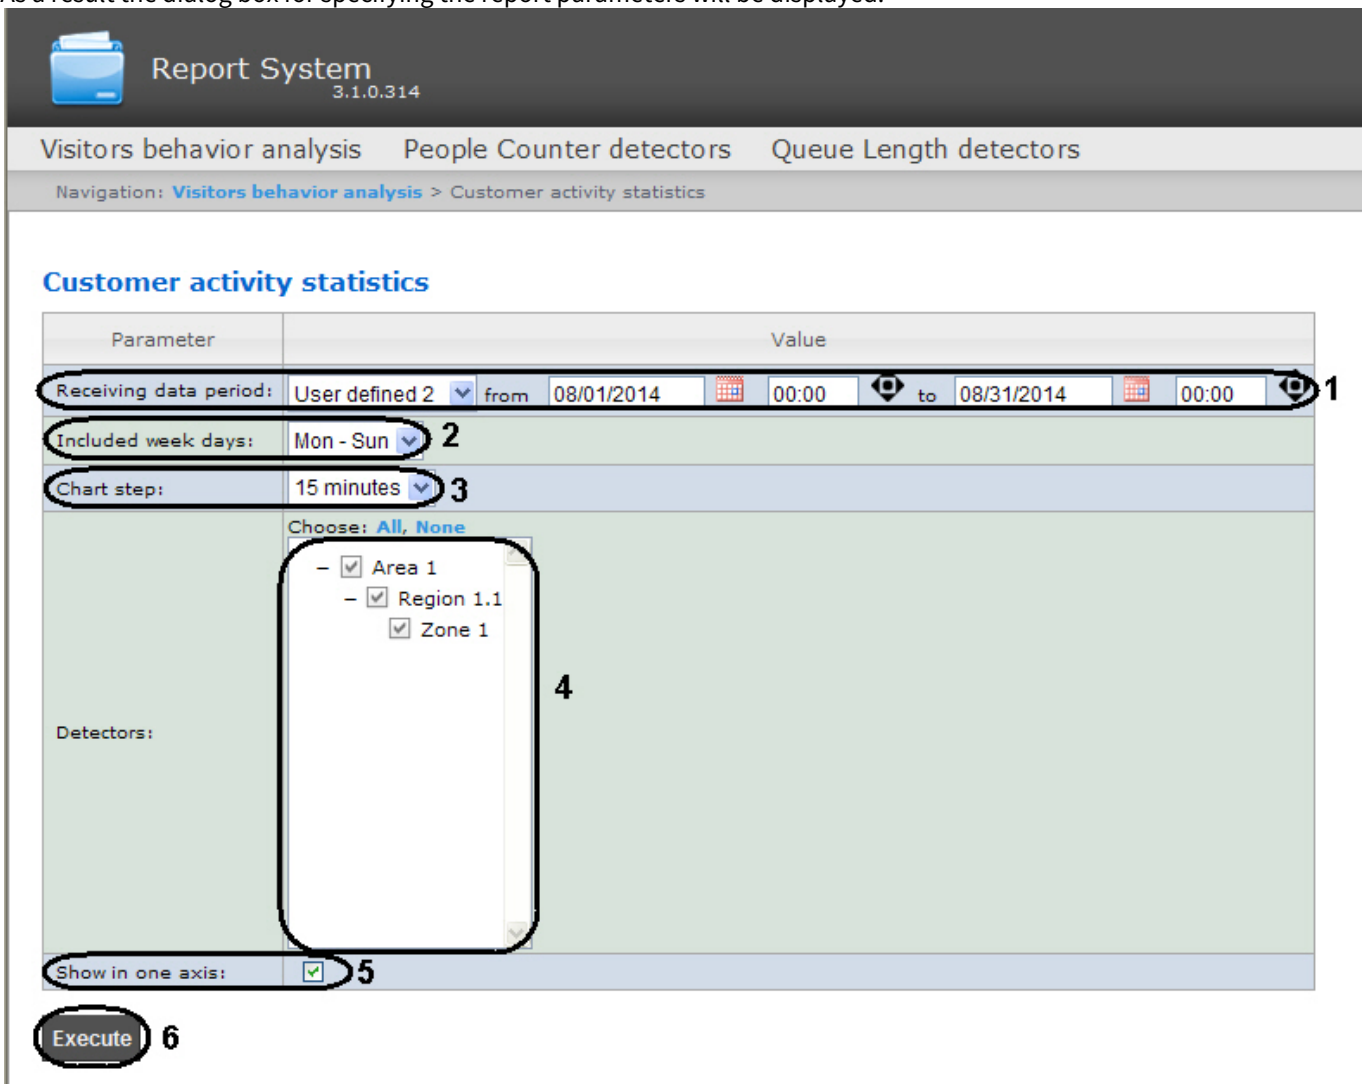


8.8.2 Creating the Customer activity statistics report

To create the customer activity statistics report, do the following:

1. Select the **Customer activity statistics** type (see Selecting a type of Visitors behavior analysis reports section).

2. As a result the dialog box for specifying the report parameters will be displayed.



Set the following report parameters:

1. Specify the period in the following way:
   a. From the **Receiving data period:** drop-down list select the time period for which the report is to be created (**1**).
   b. If the **User defined** period is selected, enter the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button near the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, enter additionally the time of start and end periods for which the report is to be created using the button.

   If another period type is selected, specifying the date of start and end periods is not needed.

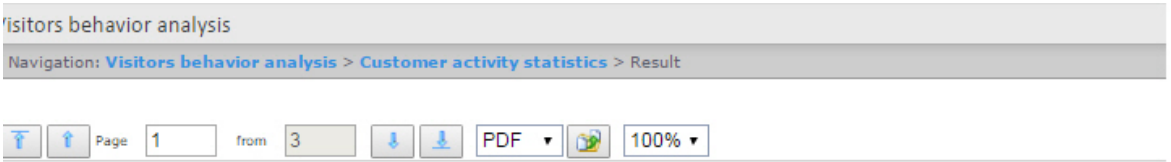
1. From the **Included week days:** drop-down list select days when most customers work (or conversely, not work) to consider in statistics (**2**).
2. From the **Chart step:** drop-down list select the time interval in which data will be averaged (**3**).

> **Note.**
> If receiving data period and specified included week days are not crossed the empty report will be created and message with proposal to change the **Included week days** parameter or specify another **Receiving data period** parameter.

3. In the **Detectors:** field set checkboxes in those zones information on which should be displayed in the report (**4**).
4. Set the **Show in one axis:** checkbox to display data from different areas in one chart (**5**).

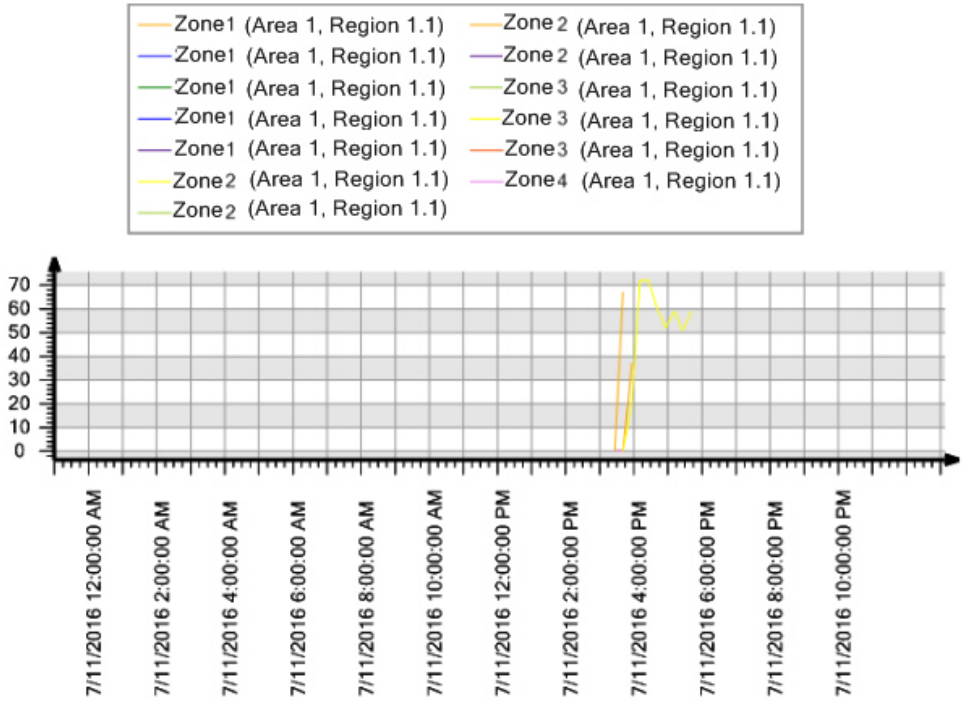
5. To create a report click **Execute** (**6**).

As a result a **Customer activity statistics** report with specified parameters is displayed. The report displays average results for whole period and detailed statistics for each time interval.



Customer activity statistics

Period: 7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM
Included weekdays Mon - Sun
Chart step: 15 minutes
Data source:

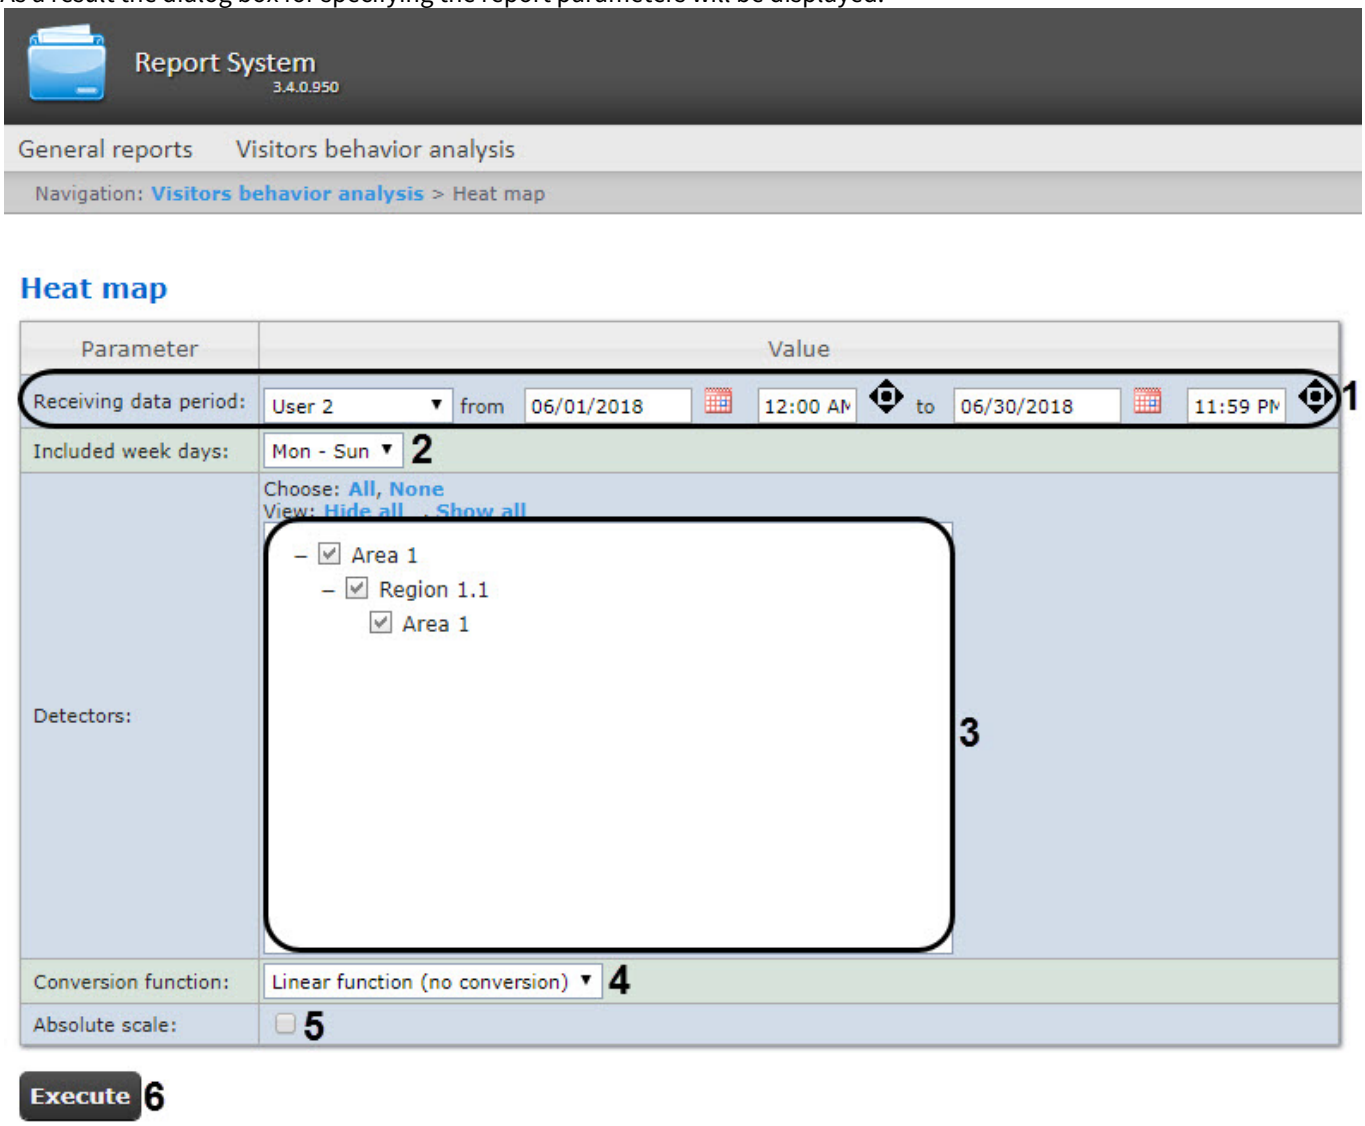


Detection	Period of data receiving	People
Average results for whole period		
Zone 1	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	19%
Zone 1	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	0%
Zone 1	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	0%
Zone 2	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	49%
Zone 2	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	0%
Zone 2	7/11/2016 12:00:00 AM 7/11/2016 11:59:59 PM	34%
Detailed statistics by points		
Zone 1	7/11/2016 3:30:00 PM 7/11/2016 3:44:59 PM	0%
Zone 1	7/11/2016 3:45:00 PM 7/11/2016 3:59:59 PM	37%
Zone 1	7/11/2016 3:30:00 PM 7/11/2016 3:44:59 PM	0%
Zone 1	7/11/2016 3:15:00 PM 7/11/2016 3:29:59 PM	0%
Zone 2	7/11/2016 3:30:00 PM 7/11/2016 3:44:59 PM	0%
Zone 2	7/11/2016 3:45:00 PM 7/11/2016 3:59:59 PM	20%
Zone 2	7/11/2016 4:00:00 PM 7/11/2016 4:14:59 PM	72%

8.8.3 Creating a Heat map report

To create the heat map report, do the following:

1. Select the **Heat map** report type (see the Selecting a type of Visitors behavior analysis reports section).
2. As a result the dialog box for specifying the report parameters will be displayed.



Set the following report parameters:

1. Specify the period as follows:
   a. From the **Receiving data period:** dropdown list select the time period for which the report is to be created (**1**).
   b. If the **User defined** period is selected, specify the date of start and end periods for which the report is to be created in the **from** and **to** fields using the **Calendar** tool. Click the button next to the corresponding field to use the **Calendar** tool.
   c. If the **User defined 2** period is selected, specify additionally the time of start and end periods for which the report is to be created using the button.

   If another period type is selected, specifying the date of start and end periods is not needed.
2. From the **Included week days:** dropdown list select days when most customers work (or do not work) to consider in statistics (**2**).

> **Note**
> If receiving data period and specified included week days are not crossed the empty report will be created and there will be the message suggesting to change the **Included week days** parameter or specify another **Receiving data period** parameter.

3. In the **Detectors:** field set checkboxes in those zones information on which should be displayed in the report (**3**).
4. From the **Conversion function:** drop-down list select the function of converting initial data to relative values (**4**).

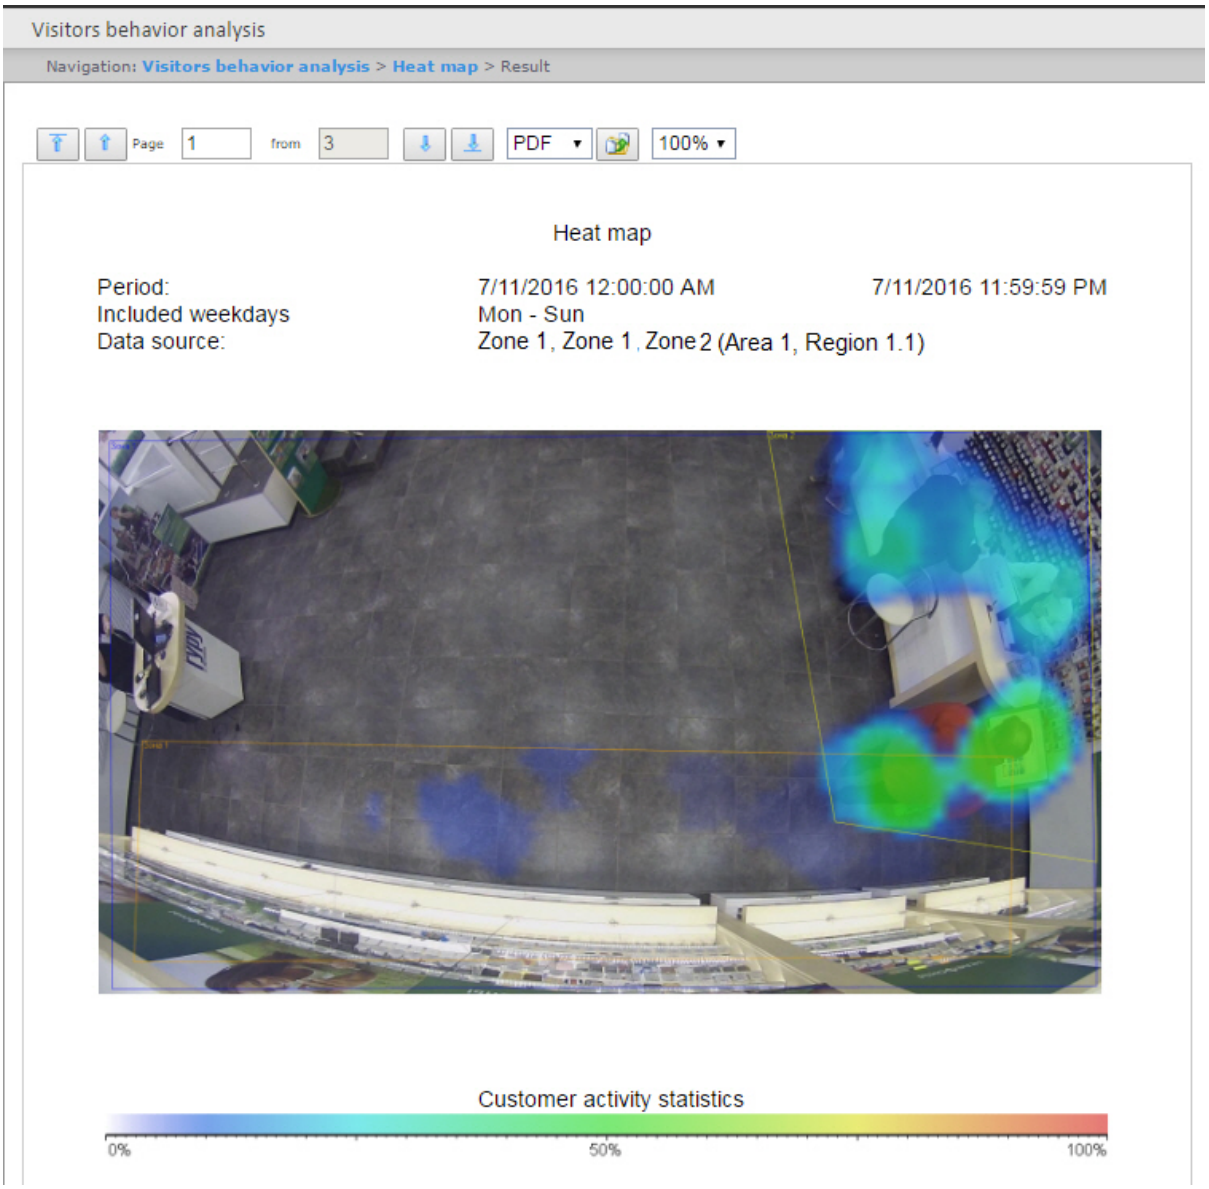
> **Note**
> Different conversion functions are designed to drag special attention to various aspects of a store customers behavior statistics.

5. Set the **Absolute scale** checkbox if it is required to dispaly initial data without any changes (**5**). By default, the checkbox is not set.

> **Note**
> This option is recommended to be used only when there is high customer activity in the store. If customer activity is low, it is not recommended to set the **Absolute scale** checkbox. If a person is in the area 100% of the time, then the area will be red, if the person is not in the area at all, then it will not be colored. As practice shows, a person can not be in a certain area 100% of the time, hence, there will never be red zones. Use the conversion function to better demonstrate this (**4**). For example, if the customer activity fluctuates in a range from 0% to 20%, each activity value will be multiplied by 100% / 20% = 5 and earlier the blue zone corresponding to 20% of activity will be displayed as 100% and red, but not blue. Find more information about the conversion functions at http://easings.net/en or https://wiki.multitheftauto.com/wiki/Easing.

6. To create a report click **Execute** (**6**).

As a result a Heat map report with specified parameters is displayed. Customer activity in different areas of the observed area is highlighted in corresponding color.



8.9 Exporting of reports

Intellect Web Report System allows exporting the created reports to computer in the following formats:

- PDF;
- RTF;
- HTML;
- Excel;
- CSV;
- Text.

From the dropdown list (**1**) select a format in which the report is exported and click the button (**2**).

Note
If there is *"System.OutOfMemoryException"* message when trying to export created **Report by users access levels** or **Report by users of access levels and readers reports** in PDF, then it is necessary to reduce exported data by splitting the report into several documents. For instance, create reports by less departments and then merge PDFs in one file using the third-party software.

9 Conclusion

Please send your comments or requests concerning this Guide to the AxxonSoft Training and documentation development division at documentation@itv.ru.

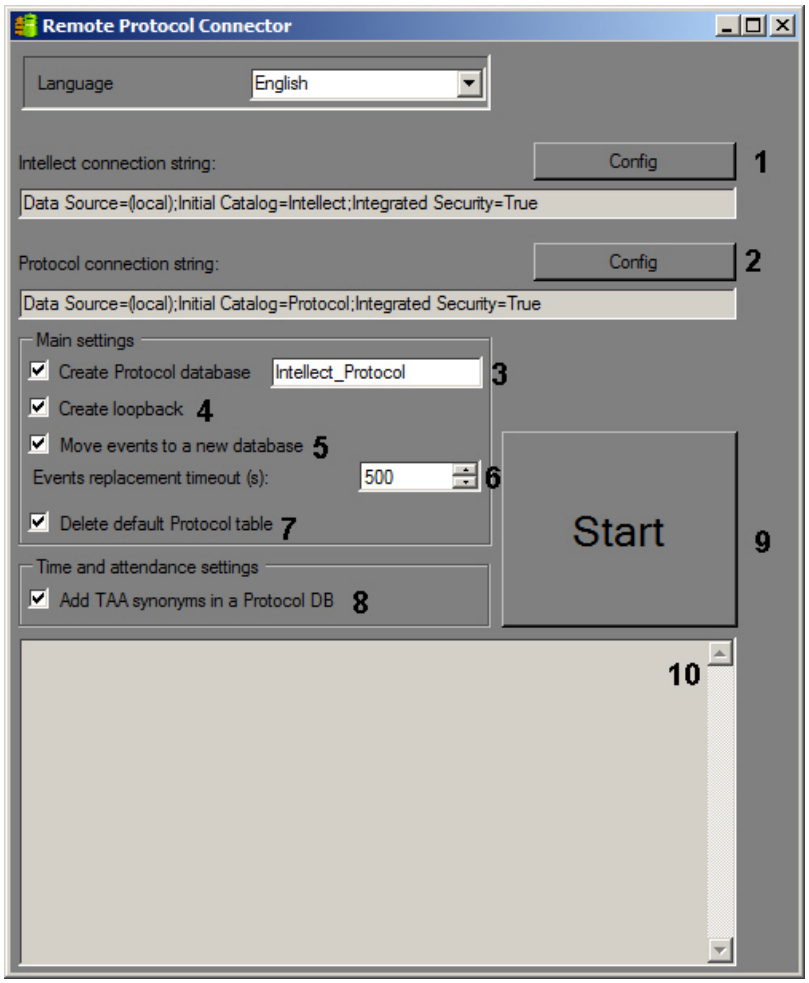
10 Appendix 1. The RemoteProtocolConnector utility for extracting event protocol to a separate database

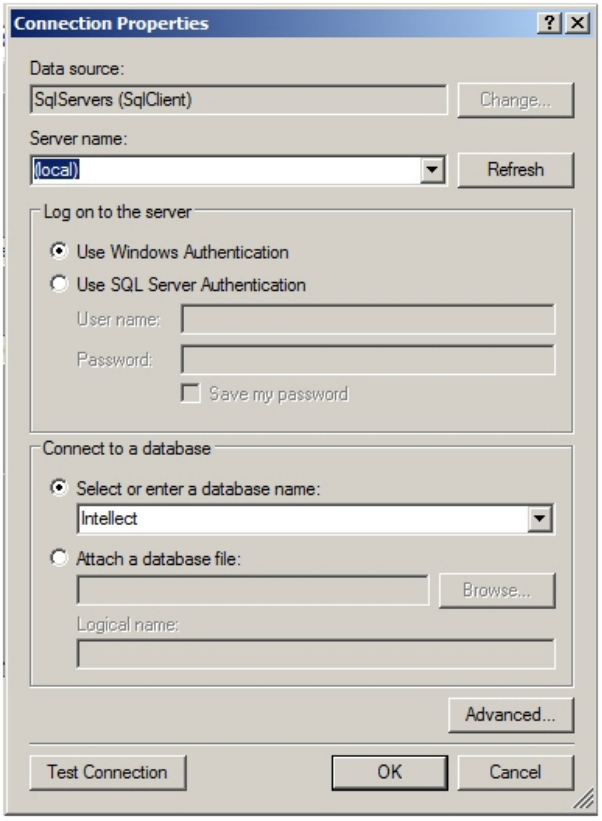
10.1 Extracting event protocol to a separate DB with RemoteProtocolConnector

Extracting event protocol to a separate DB with RemoteProtocolConnector is carried out as follows:

1. Run the the RemoteProtocolConnector.

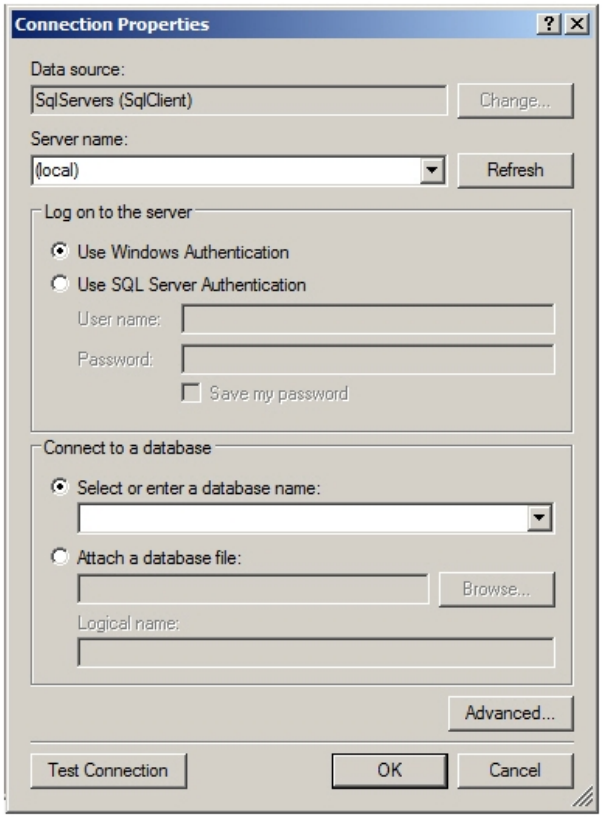


2. Check the connection string for *Intellect* software database. If the connection string is not correct, click **Config** (1) and set parameters of connection in the **Connection Properties** dialog box.



3. Specify the connection string to the database server on which the new event log database is to be created. To do that, click **Config** (2), then select database server and connection parameters in the **Connection Properties** dialog box. The **Select or enter a database name** field must be empty.

> **Note.**
> After moving the event protocol to a separate database, the connection string to created database is displayed in the **Protocol connection string** field.



4. Set the **Create Protocol database** checkbox and enter the name of new database in the corresponding field (3).
5. Set the **Create loopback** checkbox (4). This checkbox is required for creation of event protocol database synonym in order to write new events to a new database.
6. If events from the old event protocol database are to be transferred to a new one, set the **Move events to a new DB** checkbox (5). If this check box is not selected, the created database will initially be empty, and the events registered before the protocol transfer to a separate database will not be available in the system.
7. In the **Events replacement timeout field (s)** field, specify the time period in seconds to wait for the transfer of events into the new database to be completed (6). If there are many events that are transferred, this process can take a long time, so the timeout should be increased to avoid errors when executing SQL queries.
8. If after transferring the event protocol database into the new database it is required to delete the old database, check the **Delete default Protocol table** (7) checkbox.
9. Set the **Add TAA synonyms in a Protocol DB** sheckbox (8). This checkbox is required to ensure that events of user passes are copied to the appropriate database table.
10. Click **Start** (9).
11. Data transferring process and errors that occur are displayed in (10) field.

Important!
After performing the above actions start idb.exe utility and extract the event protocol database to the created database – see Appendix 2 of the *Intellect software. Administrator's Guide* (the most relevant version of this document is available in AxxonSoft documentation repository).

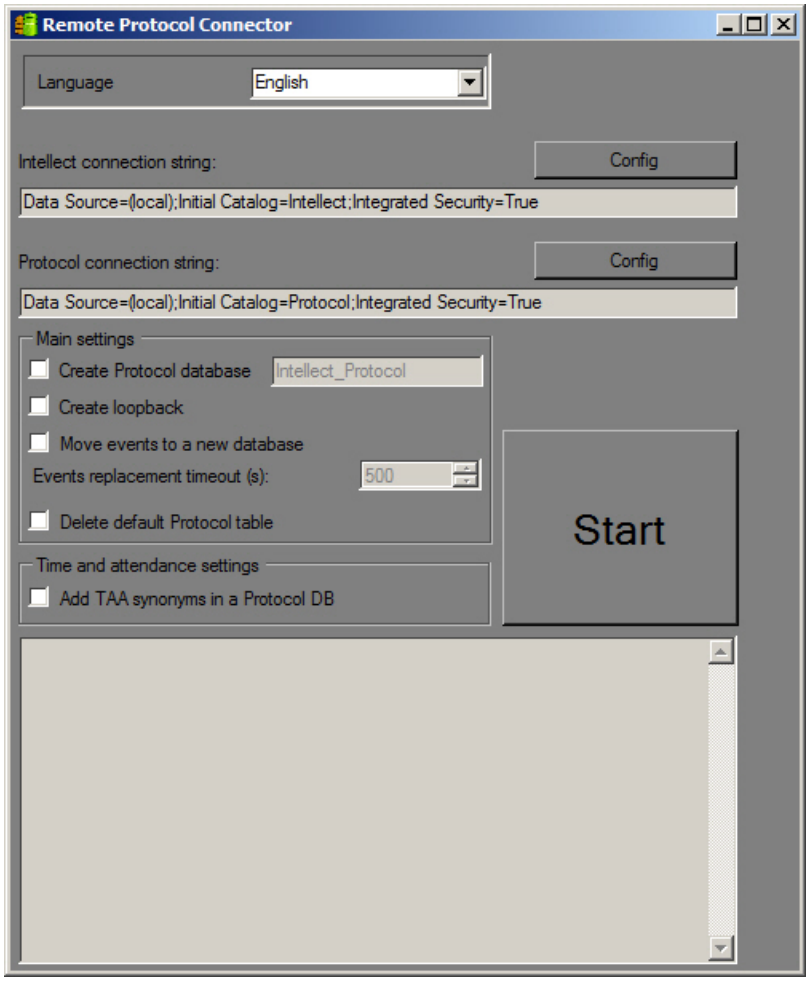
Extracting event protocol to a separate DB with RemoteProtocolConnector is completed.

10.2 Purpose of the RemoteProtocolConnector. Start and shutdown

Intellect software allows extracting event protocol into a separate database using the idb.exe utility – see Intellect software. Administrator's Guide (the most relevant version of this document is available in AxxonSoft documentation repository). However, this method can lead to troubles in operation of the *Time&Attendance* module which is the part of *ACFA-Intellect* software (see Time and Attendance Module Settings and Operation Guide). If this module is in use in the system, use the RemoteProtocolConnector utility to extract event protocol to a separate database.

To start the utility, run the RemoteProtocolConnector.exe executable file in the <*Intellect* installation>\Tools folder.

The utility window is shown in the picture below.



To stop the RemoteProtocolConnector utility, click the button.
